

Contents of Volume 2

Special values of finite multiple harmonic q -series at roots of unity <i>by Henrik Bachmann, Yoshihiro Takeyama and Koji Tasaka</i>	1
Mould calculus: from primary to secondary mould symmetries <i>by Olivier Bouillot</i>	19
Renormalisation and locality: branched zeta values <i>by Pierre Clavier, Li Guo, Sylvie Paycha and Bin Zhang</i>	85
The scrambling operators applied to multizeta algebra and singular perturbation analysis <i>by Jean Ecalle</i>	135
Quasi-shuffle algebras and applications <i>by Michael E. Hoffman</i>	327
Planar binary trees in scattering amplitudes <i>by Carlos R. Mafra</i>	349
A study on prefixes of c_2 invariants <i>by Karen Yeats</i>	367
List of contributors	385
