<b>1</b>	<b>Introduction</b>	1
1.1	Long time existence for perturbed evolution equations	1
1.2	The use of dispersion	2
1.3	Vector fields methods and global solutions	3
1.4	Klainerman–Sobolev estimates in one dimension	6
1.5	The case of long range nonlinearities	9
1.6	More general nonlinearities and normal forms	15
1.7	Perturbations of non-zero stationary solution	21
1.8	The kink problem. I	24
1.9	The kink problem II. Coupling with the bound state	27
<b>2</b>	<b>The kink problem</b>	31
2.1	Statement of the main result	31
2.2	Reduced system	33
2.3	Step 1: Writing of the system from multilinear operators	37
2.4	Step 2: First quadratic normal form	37
2.5	Step 3: Approximate solution	38
2.6	Step 4: Reduced form of dispersive equation	41
2.7	Step 5: Normal forms	43
2.8	Step 6: Bootstrap of $L^2$ estimates	46
2.9	Step 7: Bootstrap of $L^\infty$ estimates and end of proof	46
2.10	Further comments	47
<b>3</b>	<b>First quadratic normal form</b>	53
3.1	Expression of the equation from multilinear operators	53
3.2	First quadratic normal form	56
<b>4</b>	<b>Construction of approximate solutions</b>	59
4.1	Approximate solution to the dispersive equation	59
4.2	Asymptotic analysis of the ODE	73
<b>5</b>	<b>Reduced form of dispersive equation</b>	81
5.1	A fixed point theorem	81
5.2	Reduction of the dispersive equation	87
<b>6</b>	<b>Normal forms</b>	103
6.1	Expression of the equation as a system	104
6.2	Normal forms	108

<b>7</b>	<b>Bootstrap: <math>L^2</math> estimates</b>	117
7.1	Estimates for cubic and quartic terms	117
7.2	Estimates for quadratic terms	122
7.3	Higher-order terms	124
<b>8</b>	<b><math>L^\infty</math> estimates and end of bootstrap</b>	139
8.1	$L^\infty$ estimates	139
8.2	Bootstrap of $L^\infty$ estimates	145
8.3	End of bootstrap argument	152
<b>A</b>	<b>Scattering for time independent potential</b>	155
A.1	Statement of main proposition	155
A.2	Proof of main proposition	157
<b>B</b>	<b>(Semiclassical) pseudo-differential operators</b>	165
B.1	Classes of symbols and their quantization	166
B.2	Symbolic calculus	169
<b>C</b>	<b>Bounds for forced linear Klein–Gordon equations</b>	177
C.1	Linear solutions to half-Klein–Gordon equations	177
C.2	Action of linear and bilinear operators	191
C.3	An explicit computation	199
<b>D</b>	<b>Action of multilinear operators on Sobolev and Hölder spaces</b>	203
D.1	Action of quantization of non-space-decaying symbols	204
D.2	Action of quantization of space decaying symbols	213
D.3	Weyl calculus	223
<b>E</b>	<b>Wave operators for time dependent potentials</b>	229
E.1	Statement of the result	229
E.2	Technical lemmas	234
E.3	Proof of Proposition E.1.3	247
<b>F</b>	<b>Division lemmas and normal forms</b>	253
F.1	Division lemmas	253
F.2	Commutation results	255
F.3	Normal forms for non-characteristic terms	258
F.4	Quadratic normal forms for space decaying symbols	259
F.5	Sobolev estimates	262
<b>G</b>	<b>Verification of Fermi’s golden rule</b>	269
G.1	Reductions	269
G.2	Proof of the non-vanishing of $\hat{Y}_2(\sqrt{2})$	270
