

# Contents

<b>1</b>	<b>Introduction</b> . . . . .	1
1.1	Outline of Part I and II of this series . . . . .	1
1.2	Structure of the present memoir . . . . .	5
1.3	Connection to the existing literature . . . . .	10
<b>2</b>	<b>Projective representations of Lie groups</b> . . . . .	13
2.1	Locally convex Lie groups . . . . .	13
2.2	Smooth representations . . . . .	14
2.3	Central extensions . . . . .	16
2.4	Integration of projective representations . . . . .	18
2.5	Double extensions . . . . .	20
<b>3</b>	<b>Positive energy representations</b> . . . . .	21
3.1	Positive energy representations . . . . .	21
3.2	Equivariant positive energy representations . . . . .	22
3.3	Minimal representations . . . . .	23
3.4	Cauchy–Schwarz estimates (general case) . . . . .	26
<b>4</b>	<b>Covariant extensions of gauge algebras</b> . . . . .	31
4.1	Gauge groups and gauge algebras . . . . .	31
4.2	Reduction to simple structure algebras . . . . .	34
4.3	Central extensions of gauge algebras . . . . .	35
<b>5</b>	<b>Cocycles for positive energy representations</b> . . . . .	39
5.1	Local gauge algebras . . . . .	39
5.2	Infinitesimally free $\mathbb{R}$ -actions . . . . .	43
5.3	Cauchy–Schwarz estimates revisited . . . . .	45
<b>6</b>	<b>Continuity properties</b> . . . . .	47
6.1	Reduction to compact simple structure algebras . . . . .	47
6.2	Extending the estimates from $D\mathfrak{g}$ to $\mathfrak{g}$ . . . . .	49
6.3	Extending representations to Sobolev spaces . . . . .	59
6.4	Sobolev–Lie algebras . . . . .	64
6.5	The continuous extension theorem . . . . .	70

<b>7</b>	<b>The localization theorem</b> . . . . .	77
7.1	Statement and discussion of the theorem . . . . .	77
7.2	Localization at the Lie algebra level . . . . .	81
7.3	Twisted loop groups . . . . .	84
7.4	Localization at the group level . . . . .	88
7.5	Localization for equivariant representations . . . . .	89
<b>8</b>	<b>The classification for <math>M</math> compact</b> . . . . .	93
8.1	Positive energy representation of twisted loop groups . . . . .	93
8.2	The classification theorem for compact base manifolds . . . . .	99
8.3	Extensions to non-connected groups . . . . .	102
<b>9</b>	<b>The classification for <math>M</math> noncompact</b> . . . . .	105
9.1	Infinitely many lines . . . . .	105
9.2	Infinitely many circles . . . . .	113
9.3	A simple example with fixed points . . . . .	121
<b>A</b>	<b>Twisted loop algebras and groups</b> . . . . .	125
<b>B</b>	<b>Twisted conjugacy classes in compact groups</b> . . . . .	127
<b>C</b>	<b>Restricting representations to normal subgroups</b> . . . . .	129
<b>D</b>	<b>Vacuum representations</b> . . . . .	131
D.1	Weak products and $\mathbb{R}$ -actions . . . . .	131
D.2	Vacuum representations . . . . .	133
<b>E</b>	<b>Ergodic property of 1-parameter subgroups of <math>\widetilde{SL}(2, \mathbb{R})</math></b> . . . . .	137
	<b>References</b> . . . . .	139
	<b>Index</b> . . . . .	147
