

CONTENTS

Preface – <i>Nicolai Stammeier and Moritz Weber</i>	ix
Background and outlook – <i>Dan-Virgil Voiculescu</i>	1
Basics in free probability – <i>Moritz Weber</i>	7
Introduction	7
Noncommutative probability spaces	7
Freeness	9
Noncommutative distributions	11
Examples of noncommutative distributions	13
Random matrices and combinatorics – <i>Roland Speicher</i>	17
Introduction	17
Gaussian random matrices and Wigner’s semicircle law	17
The free central limit theorem	21
Noncrossing partitions and free cumulants	24
Sums and products of free variables	27
Asymptotic freeness of random matrices	32
Comments	36
Free monotone transport – <i>Dimitri Shlyakhtenko</i>	39
Introduction	39
Classical transportation theory	39
Translation to the free case	41
Free Gibbs laws	46
Connection between random matrices and free Gibbs states	48
Applications	51
Is our map optimal?	52
Comments	52
Exercises	53
Free group factors – <i>Ken Dykema</i>	57
Introduction	57
C*-noncommutative probability spaces	57
Reduced free products of C*-algebras and von Neumann algebras	58
Applications of random matrices to von Neumann algebras	61
Interpolated free group factors and some results about free products	65
Further results about free group factors	68
Exercises	70
Free convolution – <i>Hari Bercovici</i>	73
Introduction	73
Limit theorems in classical probability theory	73

Limit theorems in free probability theory	74
Unbounded random variables	75
Univariate limit theorems	81
Multiplicative free convolution	82
Multivariate limit theorems	83
Subordination	84
Comments and exercises	87
Easy quantum groups – <i>Moritz Weber</i>	95
Introduction	95
Compact matrix quantum groups	95
Categories of partitions	100
Examples and classification of easy quantum groups	104
De Finetti theorems in free probability	108
Laws of characters	111
The Haar state on easy quantum groups	112
Fusion rules of easy quantum groups	113
Associated von Neumann algebras	115
Comments	116
Exercises	117
Participants	123
Contributors	129
Index	131
