

Contents

Preface	v
Contents	xi
1 Huber rings and valuation spectra	1
<i>by John Bergdall</i>	
1 Introduction	1
2 Huber rings	4
3 Valuation theory	15
4 Constructions with adic spectra	30
5 The closed unit disc	40
References	52
2 Adic spaces	55
<i>by Katharina Hübner</i>	
1 Introduction	55
2 The adic spectrum of a Huber pair	56
3 The structure (pre-)sheaf	63
4 Adic spaces	71
5 Local Huber pairs	78
6 Analytic adic spaces	87
7 Morphisms of finite type	91
8 Formal schemes and generic fibers	98
9 The fiber product of adic spaces	102
10 Analytification	106
References	110
3 Topics in adic spaces	113
<i>by Christian Johansson</i>	
1 Introduction	113
2 Coherent sheaves	115
3 Finiteness properties of morphisms	122
4 More on rigid spaces	130
5 Uniformisation of curves	139
A Čech and sheaf cohomology	147
B Some topology	152
C Some algebra	153
References	155

4	Perfectoid spaces	159
	<i>by Ben Heuer</i>	
1	Perfectoid fields	159
2	Perfectoid K -algebras	177
3	Perfectoid spaces	190
4	Applications to p -adic Hodge theory	201
	References	219
5	Spectral theory and the eigenvariety machine	223
	<i>by Judith Ludwig</i>	
1	Introduction	223
2	Background from functional analysis	225
3	Spectral varieties	239
4	Riesz theory	248
5	The eigenvariety machine	252
A	Pseudorigid spaces	261
	References	265
6	Construction of eigenvarieties	267
	<i>by James Newton</i>	
1	Introduction	267
2	Overconvergent modular forms and the Coleman–Mazur eigencurve	267
3	An overview of constructions of eigenvarieties	283
4	Eigencurves for definite quaternion algebras	286
5	Overconvergent cohomology	295
	References	300
	List of contributors	305
