Preface	v
1 Basic local representation theory	1
<i>Burkhard Külshammer</i>	
Bibliography	21
2 Reduction theorems for some global–local conjectures	23
<i>Britta Späth</i>	
1 Clifford theory via projective representations	24
2 Centrally ordered character triples	30
3 A reduction theorem for the McKay conjecture	41
4 Other reduction theorems	50
Bibliography	60
3 A first guide to the character theory of finite groups of Lie type	63
<i>Meinolf Geck</i>	
1 Introduction	63
2 The virtual characters of Deligne and Lusztig	65
3 Order and degree polynomials	70
4 Parametrization of unipotent characters	75
5 Jordan decomposition (connected center)	80
6 Regular embeddings	85
7 Character sheaves	93
8 Appendix: On uniform functions	98
Bibliography	102
4 Lectures on modular Deligne–Lusztig theory	107
<i>Olivier Dudas</i>	
1 Introduction to derived categories	108
2 Varieties and cohomology	123
3 Deligne–Lusztig varieties and their cohomology	130
4 Decomposition numbers from Deligne–Lusztig characters	138
5 Brauer trees of unipotent blocks	152
6 The Coxeter variety	164
Bibliography	174

5	Local methods for blocks of finite simple groups	179
	<i>Marc Cabanes</i>	
	I Defining characteristic	181
	1 p -local subgroups and parabolic subgroups	181
	2 Yokonuma–Hecke algebras in characteristic p	190
	3 Simple $\mathbb{F}G$ -modules and p -blocks	194
	II Non-defining characteristic ($\ell \neq p$)	198
	4 Rational series and ℓ -blocks	198
	5 Local methods for blocks of finite quasi-simple groups	208
	6 Local methods for unipotent blocks: The strategy	219
	7 Local methods: Unipotent blocks and d -Harish-Chandra theory	224
	8 Some applications	235
	9 Bonnafé–Dat–Rouquier’s theorems	240
	10 Recreation: Blocks of defect zero	254
	Bibliography	258
6	Simple groups, fixed point ratios and applications	267
	<i>Timothy C. Burness</i>	
	1 Introduction	267
	2 Simple groups	273
	3 Generation and random generation	290
	4 Monodromy groups	300
	5 Bases	308
	Bibliography	317
7	Applications of character theory of finite simple groups	323
	<i>Martin W. Liebeck</i>	
	1 Introduction	323
	2 Alternating and symmetric groups	331
	3 Groups of Lie type	339
	Bibliography	349
	Contributors	353
	Index	355
