Preface	v
Introduction	1
1 Abstract measure theory	3
1.1 σ -algebras	4
1.2 Measurable functions	11
1.3 Integration of nonnegative functions	18
1.4 Integration of real valued functions	32
1.5 Sets of measure zero	36
1.6 Completion of a measure space	43
1.7 Exercises	47
2 The Lebesgue measure	57
2.1 Outer measures	58
2.2 The Lebesgue outer measure	64
2.3 The transformation formula	77
2.4 Lebesgue equals Riemann	86
2.5 Exercises	90
3 Borel measures	95
3.1 Regular Borel measures	95
3.2 Borel outer measures	107
3.3 The Riesz representation theorem	113
3.4 Exercises	126
4 L^p spaces	133
4.1 Hölder and Minkowski	133
4.2 The Banach space $L^p(\mu)$	136
4.3 Separability	141
4.4 Hilbert spaces	147
4.5 The dual space of $L^p(\mu)$	152
4.6 Exercises	168

5	The Radon–Nikodým theorem	179
5.1	Absolutely continuous measures	179
5.2	The dual space of $L^p(\mu)$ revisited	187
5.3	Signed measures	197
5.4	Radon–Nikodým generalized	205
5.5	Exercises	214
6	Differentiation	221
6.1	Weakly integrable functions	221
6.2	Maximal functions	227
6.3	Lebesgue points	233
6.4	Absolutely continuous functions	239
6.5	Exercises	243
7	Product measures	249
7.1	The product σ -algebra	249
7.2	The product measure	255
7.3	Fubini’s Theorem	261
7.4	Fubini and Lebesgue	272
7.5	Convolution	277
7.6	Marcinkiewicz interpolation	286
7.7	The Calderón–Zygmund inequality	292
7.8	Exercises	304
8	The Haar measure	309
8.1	Topological groups	309
8.2	Haar measures	312
Appendices		
A	Urysohn’s lemma	333
B	The product topology	339
C	The inverse function theorem	343
