

# Contents

<b>Foreword</b> .....	v
<b>Preface to the Second Edition</b> .....	vii
<b>Preface to the First Edition</b> .....	xi
<b>Structure of Compact Groups and Pro-Lie Groups: Our Selection</b> .....	1
Compact Abelian Groups .....	3
Compact Groups .....	6
Lie Theory .....	11
Abelian Pro-Lie Groups .....	13
Pro-Lie Groups .....	14
<b>1 Lie Groups and the Lie Theory of Topological Groups</b> .....	17
The General Definition of a Lie Group .....	17
The Exponential Function of Topological Groups .....	20
The Lie Algebra of a Topological Group .....	25
The Category of Topological Groups with Lie Algebras .....	30
The Lie Algebra Functor Has a Left Adjoint Functor .....	38
Sophus Lie's Third Fundamental Theorem .....	42
The Adjoint Representation of a Topological Group with a Lie Algebra . . .	42
Postscript .....	45
<b>2 Pro-Lie Groups</b> .....	47
Projective Limits of Lie Groups .....	47
The Lie Algebras of Projective Limits of Lie Groups .....	50
Pro-Lie Algebras .....	50
Weakly Complete Topological Vector Spaces and Lie Algebras .....	55
Pro-Lie Groups .....	61
Some Examples .....	80
An Overview of the Definitions of a Pro-Lie Group .....	80
Postscript .....	84
<b>3 Quotients of Pro-Lie Groups</b> .....	89
Quotient Objects in Categories .....	90
Quotient Groups of Pro-Lie Groups .....	91

The One-Parameter Subgroup Lifting Lemma . . . . .	94
Sufficient Conditions for Quotients to be Complete . . . . .	105
Quotient Maps between Pro-Lie Groups . . . . .	120
Postscript . . . . .	123
<b>4 Abelian Pro-Lie Groups . . . . .</b>	<b>125</b>
Examples of Abelian Pro-Lie Groups . . . . .	125
Weil’s Lemma . . . . .	129
Vector Group Splitting Theorems . . . . .	133
Compactly Generated Abelian Pro-Lie Groups . . . . .	147
Weakly Complete Topological Vector Spaces Revisited . . . . .	150
The Duality Theory of Abelian Pro-Lie Groups . . . . .	153
The Toral Homomorphic Images of an Abelian Pro-Lie Group . . . . .	157
The Exponential Function of Compact Abelian Groups and Quotient Morphisms . . . . .	161
Postscript . . . . .	172
<b>5 Lie’s Third Fundamental Theorem . . . . .</b>	<b>175</b>
Lie’s Third Fundamental Theorem for Pro-Lie Groups . . . . .	175
Semidirect Products . . . . .	191
Postscript . . . . .	194
<b>6 Profinite-Dimensional Modules and Lie Algebras . . . . .</b>	<b>197</b>
Modules over a Lie Algebra . . . . .	197
Duality of Modules . . . . .	200
Semisimple and Reductive Modules . . . . .	206
Reductive Pro-Lie Algebras . . . . .	211
Transfinitely Solvable Lie Algebras . . . . .	214
The Radical and Levi–Mal’cev: Existence . . . . .	221
Transfinitely Nilpotent Lie Algebras . . . . .	227
The Nilpotent Radicals . . . . .	231
Special Endomorphisms of Pro-Lie Algebras . . . . .	237
Levi–Mal’cev: Uniqueness . . . . .	241
Direct and Semidirect Sums Revisited . . . . .	245
Cartan Subalgebras of Pro-Lie Algebras . . . . .	247
Theorem of Ado . . . . .	264
The Automorphism Group of Semisimple Pro-Lie Algebras . . . . .	266
Postscript . . . . .	282

<b>7</b>	<b>The Structure of Simply Connected Pro-Lie Groups</b> . . . . .	285
	The Adjoint Action . . . . .	285
	Simply Connected Pronilpotent Pro-Lie Groups . . . . .	286
	The Topological Splitting Technique . . . . .	290
	Simple Connectivity . . . . .	293
	Universal Morphism versus Universal Covering Morphism . . . . .	303
	Postscript . . . . .	305
<b>8</b>	<b>Analytic Subgroups and the Lie Theory of Pro-Lie Groups</b> . . . . .	307
	The Exponential Function on the Inner Derivation Algebra . . . . .	307
	Analytic Subgroups . . . . .	311
	Automorphisms and Invariant Analytic Subgroups . . . . .	321
	Centralizers . . . . .	322
	Normalizers . . . . .	325
	Subalgebras and Subgroups . . . . .	327
	The Center . . . . .	329
	The Commutator Subgroup . . . . .	329
	Finite-Dimensional Connected Pro-Lie Groups . . . . .	338
	Compact Central Subgroups . . . . .	356
	Divisibility of Groups and Connected Pro-Lie Groups . . . . .	359
	The Open Mapping Theorem . . . . .	365
	Completing Proto-Lie Groups . . . . .	369
	Unitary Representations . . . . .	371
	Postscript . . . . .	372
<b>9</b>	<b>The Global Structure of Connected Pro-Lie Groups</b> . . . . .	375
	Solvability of Pro-Lie Groups . . . . .	376
	The Radical . . . . .	388
	Semisimple and Reductive Groups . . . . .	392
	Nilpotency of Pro-Lie Groups . . . . .	402
	The Nilradical and the Coreductive Radical . . . . .	406
	The Structure of Reductive Pro-Lie Groups . . . . .	412
	Postscript . . . . .	419
<b>10</b>	<b>Splitting Theorems for Pro-Lie Groups</b> . . . . .	423
	Splitting Reductive Groups Semidirectly . . . . .	424
	Vector Group Splitting in Noncommutative Groups . . . . .	436
	The Structure of Pronilpotent and Prosolvable Groups . . . . .	442
	Conjugacy Theorems . . . . .	451
	Postscript . . . . .	454

<b>11 Procompact Subalgebras of Pro-Lie Algebras and Compact</b>	
<b>Subgroups of Pro-Lie Groups</b> . . . . .	457
Procompact Modules and Lie Algebras . . . . .	457
Procompact Lie Algebras and Compactly Embedded Lie Subalgebras of	
Pro-Lie Algebras . . . . .	464
Maximal Compactly Embedded Subalgebras of Pro-Lie Algebras . . . . .	469
Conjugacy of Maximal Compactly Embedded Subalgebras . . . . .	472
Compact Connected Groups . . . . .	483
Compact Subgroups . . . . .	485
Potentially Compact Pro-Lie Groups . . . . .	488
The Conjugacy of Maximal Compact Connected Subgroups . . . . .	491
The Analytic Subgroups Having a Full Lie Algebra . . . . .	500
Maximal Compact Subgroups of Connected Pro-Lie Groups . . . . .	512
An Alternative Open Mapping Theorem . . . . .	517
On the Center of a Connected Pro-Lie Group . . . . .	519
Postscript . . . . .	522
<b>12 The Structure of Almost Connected Pro-Lie Groups</b> . . . . .	527
The Automorphism Groups of Semisimple Pro-Lie Groups . . . . .	527
Topological Groups with Pro-Lie Identity Component . . . . .	534
Almost Connected Pro-Lie Groups . . . . .	538
Maximal Compact Subgroups of Almost Connected Pro-Lie Groups . . . . .	540
The Conjugacy of Maximal Compact Subgroups in Almost Connected	
Pro-Lie Groups . . . . .	543
The Structure of Almost Connected Pro-Lie Groups . . . . .	544
Postscript . . . . .	544
<b>13 Almost Connected Pro-Lie Groups and their Topology</b> . . . . .	547
Almost Connected Pro-Lie Groups and their Topology . . . . .	547
Postscript . . . . .	556
<b>14 Iwasawa’s Local Splitting Theorem</b> . . . . .	557
Locally Splitting Lie Group Quotients of Pro-Lie Groups . . . . .	557
The Lie Algebra Theory of the Local Splitting . . . . .	562
Splitting on the Group Level . . . . .	571
Some Comments on Connectedness . . . . .	576
Postscript . . . . .	577
<b>15 Catalog of Examples</b> . . . . .	579
Classification of the Examples in the Catalog . . . . .	579
Abelian Pro-Lie Groups . . . . .	580

A Simple Construction . . . . .	588
Pronilpotent Pro-Lie Groups . . . . .	591
Prosolvable Pro-Lie Groups . . . . .	595
Semisimple and Reductive Pro-Lie Groups . . . . .	602
Mixed Groups . . . . .	609
Examples Concerning the Definition of Lie and Pro-Lie Groups . . . . .	611
Analytic Subgroups of Pro-Lie Groups . . . . .	615
Examples Concerning Simple Connectivity . . . . .	616
Example Concerning $\mathfrak{g}$ -Module Theory . . . . .	617
Postscript . . . . .	617
<b>Panoramic Overview of this Book . . . . .</b>	<b>619</b>
Part 1. The Base Theory of Pro-Lie Groups . . . . .	625
Part 2. The Algebra of Pro-Lie Algebras . . . . .	639
Part 3. The Fine Lie Theory of Pro-Lie Groups . . . . .	648
Part 4. Global Structure Theory of Connected Pro-Lie Groups . . . . .	656
Part 5. The Role of Compactness on the Pro-Lie Algebra Level . . . . .	667
Part 6. The Role of Compact Subgroups of Pro-Lie Groups . . . . .	675
Part 7. Local Splitting According to Iwasawa . . . . .	686
<b>A1 Limits of Topological Groups . . . . .</b>	<b>689</b>
Limits . . . . .	690
The External Approach to Projective Limits . . . . .	704
Projective Limits and Local Compactness . . . . .	709
The Fundamental Theorem on Projective Limits . . . . .	716
The Internal Approach to Projective Limits . . . . .	719
Projective Limits and Completeness . . . . .	722
The Closed Subgroup Theorem . . . . .	725
The Role of Local Compactness . . . . .	729
The Role of Closed Full Subcategories in Complete Categories . . . . .	731
Postscript . . . . .	734
<b>A2 Weakly Complete Topological Vector Spaces . . . . .</b>	<b>737</b>
Character Groups of Topological Vector Spaces . . . . .	737
Weakly Complete Topological Vector Spaces . . . . .	745
Duality at Work for the Structure Theory of Weakly Complete Topological Vector Spaces . . . . .	751
Topological Properties of Weakly Complete Topological Vector Spaces . . . . .	755
Summability in Weakly Complete Topological Vector Spaces . . . . .	758
Continuous Symplectic Maps on Weakly Complete Topological Vector Spaces . . . . .	758

Tensor Products . . . . .	761
Weakly Complete Unital Algebras . . . . .	762
The Exponential Function . . . . .	766
Weakly Complete Symmetric Hopf Algebras . . . . .	768
The Significance of Grouplike Elements . . . . .	770
The Significance of Primitive Elements . . . . .	774
Postscript . . . . .	782
<b>A3 The Campbell–Hausdorff Formalism . . . . .</b>	<b>785</b>
Postscript . . . . .	789
<b>A4 Various Pieces of Information on Semisimple Lie Algebras . . . . .</b>	<b>791</b>
Brackets in Semisimple Lie Algebras . . . . .	791
Brackets in Compact Lie Algebras . . . . .	792
Maximal Compactly Embedded Subalgebras . . . . .	794
Postscript . . . . .	795
<b>References . . . . .</b>	<b>797</b>
<b>Index . . . . .</b>	<b>809</b>
