Preface	vii
Chapter 1. Leonhard Euler (1707-1783)	1
1.1. Introduction	1
1.2. Early life	5
1.3. The first stay in St. Petersburg: 1727-1741	8
1.4. The Berlin years: 1741-1766	11
1.5. The second St. Petersburg stay and the last years: 1766-1783	12
1.6. Opera Omnia	13
1.7. The personality of Euler	14
Notes and references	15
Chapter 2. The Universal Mathematician	21
2.1. Introduction	21
2.2. Calculus	21
2.3. Elliptic integrals	23
2.4. Calculus of variations	33
2.5. Number theory	37
Notes and references	57
Chapter 3. Zeta Values	59
3.1. Summary	59
3.2. Some remarks on infinite series and products and their values	64
3.3. Evaluation of $\zeta(2)$ and $\zeta(4)$	68
3.4. Infinite products for circular and hyperbolic functions	77
3.5. The infinite partial fractions for $(\sin x)^{-1}$ and $\cot x$ . Evaluation of $\zeta(2k)$ and $L(2k + 1)$	87
3.6. Partial fraction expansions as integrals	94
3.7. Multizeta values	105
Notes and references	110
Chapter 4. Euler-Maclaurin Sum Formula	113
4.1. Formal derivation	113
4.2. The case when the function is a polynomial	116
4.3. Summation formula with remainder terms	117
4.4. Applications	121
Notes and references	124
Chapter 5. Divergent Series and Integrals	125
5.1. Divergent series and Euler's ideas about summing them	125
5.2. Euler's derivation of the functional equation of the zeta function	131

5.3.	Euler's summation of the factorial series	138
5.4.	The general theory of summation of divergent series	145
5.5.	Borel summation	152
5.6.	Tauberian theorems	158
5.7.	Some applications	163
5.8.	Fourier integral, Wiener Tauberian theorem, and Gel'fand transform on commutative Banach algebras	171
5.9.	Generalized functions and smeared summation	185
5.10.	Gaussian integrals, Wiener measure and the path integral formulae of Feynman and Kac	191
	Notes and references	206
Chapter 6. Euler Products		211
6.1.	Euler's product formula for the zeta function and others	211
6.2.	Euler products from Dirichlet to Hecke	217
6.3.	Euler products from Ramanujan and Hecke to Langlands	238
6.4.	Abelian extensions and class field theory	251
6.5.	Artin nonabelian $L$ -functions	262
6.6.	The Langlands program	264
	Notes and references	265
