Preface	vii
Some Background	ix
Fields	ix
Groups	ix
Representations	x
Local Langlands Programme	xii
Part 1. Smooth Representations	1
Chapter 1. The Bernstein Decomposition and the Bernstein Centre ALAN ROCHE (UNIVERSITY OF OKLAHOMA)	3
Introduction	3
1.1. Notation and some preliminaries	4
1.2. The splitting induced by an irreducible finite representation	6
1.3. Splitting off all finite irreducible representations	10
1.4. Reductive groups and cuspidal representations	12
1.5. The structure of a cuspidal component I	17
1.6. The structure of a cuspidal component II	21
1.7. The Bernstein decomposition	29
1.8. The structure of a non-cuspidal component I	37
1.9. The structure of a non-cuspidal component II	41
1.10. Some applications	45
Chapter 2. Bruhat-Tits Theory and Buildings JIU-KANG YU (PURDUE UNIVERSITY)	53
Introduction	53
2.1. Lecture 1	53
2.2. Lecture 2	63
2.3. Lecture 3	70
Chapter 3. Supercuspidal Representations: Construction and Exhaustion JU-LEE KIM (MASSACHUSETTS INSTITUTE OF TECHNOLOGY)	79
Introduction	79
3.1. History	80
3.2. Preliminaries	82
3.3. Open compact subgroups: The Moy-Prasad filtration	87
3.4. Some examples of supercuspidal representations	88
3.5. More examples	90

3.6.	Yu's construction	91
3.7.	An exhaustion theorem	93
3.8.	Proof of the main theorem	95
3.9.	Some remarks	98
Part 2. Character Theory		101
Chapter 4.	Character Theory of Reductive p -adic Groups PAUL J. SALLY, JR. (UNIVERSITY OF CHICAGO) AND LOREN SPICE (UNIVERSITY OF MICHIGAN)	103
	Introduction	103
4.1.	History I. 1960–1975	105
4.2.	History II. 1975–1990	107
4.3.	History III. 1990–Present	108
4.4.	GL_ℓ and SL_ℓ	109
4.5.	Division algebras	109
Chapter 5.	An Overview of Arithmetic Motivic Integration JULIA GORDON (UNIVERSITY OF BRITISH COLUMBIA) AND YOAV YAFFE (MCMASTER UNIVERSITY)	113
	Introduction	113
5.1.	p -adic integration	114
5.2.	Constructible motivic Functions	118
5.3.	Motivic integration as pushforward	125
5.4.	Back to p -adic integration	135
5.5.	Some applications	139
5.6.	Appendix 1: The older theories	142
5.7.	Appendix 2: An example	147
Part 3. Local Langlands Correspondence		151
Chapter 6.	Notes on the Local Langlands Program PAUL MEZO (CARLETON UNIVERSITY)	153
	Preface	153
6.1.	The Galois group	153
6.2.	Local abelian class field theory	156
6.3.	Weil groups	159
6.4.	The Weil-Deligne group	161
6.5.	The local Langlands correspondence for general linear groups	164
6.6.	L-groups	168
6.7.	The local Langlands correspondence	173
Chapter 7.	On the Local Langlands Correspondence for Tori JIU-KANG YU (PURDUE UNIVERSITY)	177
	Introduction	177
7.1.	Notation	177
7.2.	Local class field theory	178
7.3.	The special case of an induced torus	178
7.4.	The special case of characters of finite order	178
7.5.	The LLC for tori in general	179

7.6. Proof of uniqueness and (2')	179
7.7. Proof of existence	180
7.8. Proof that φ_T is an isomorphism	182
7.9. Depths for tamely ramified tori	183
7.10. The depth-preserving theorem	183
Bibliography	185
