Preface to Second Edition	ix
Special Notation	xiii
Chapter 1. Groups I	1
1.1. Classical Formulas	1
1.2. Permutations	5
1.3. Groups	16
1.4. Lagrange's Theorem	28
1.5. Homomorphisms	38
1.6. Quotient Groups	47
1.7. Group Actions	60
1.8. Counting	76
Chapter 2. Commutative Rings I	81
2.1. First Properties	81
2.2. Polynomials	91
2.3. Homomorphisms	96
2.4. From Arithmetic to Polynomials	102
2.5. Irreducibility	115
2.6. Euclidean Rings and Principal Ideal Domains	123
2.7. Vector Spaces	133
2.8. Linear Transformations and Matrices	145
2.9. Quotient Rings and Finite Fields	156
Chapter 3. Galois Theory	173
3.1. Insolvability of the Quintic	173

3.1.1.	Classical Formulas and Solvability by Radicals	181
3.1.2.	Translation into Group Theory	184
3.2.	Fundamental Theorem of Galois Theory	192
3.3.	Calculations of Galois Groups	212
Chapter 4.	Groups II	223
4.1.	Finite Abelian Groups	223
4.1.1.	Direct Sums	223
4.1.2.	Basis Theorem	230
4.1.3.	Fundamental Theorem	236
4.2.	Sylow Theorems	243
4.3.	Solvable Groups	252
4.4.	Projective Unimodular Groups	263
4.5.	Free Groups and Presentations	270
4.6.	Nielsen–Schreier Theorem	285
Chapter 5.	Commutative Rings II	295
5.1.	Prime Ideals and Maximal Ideals	295
5.2.	Unique Factorization Domains	302
5.3.	Noetherian Rings	312
5.4.	Zorn’s Lemma and Applications	316
5.4.1.	Zorn’s Lemma	317
5.4.2.	Vector Spaces	321
5.4.3.	Algebraic Closure	325
5.4.4.	Lüroth’s Theorem	331
5.4.5.	Transcendence	335
5.4.6.	Separability	342
5.5.	Varieties	348
5.5.1.	Varieties and Ideals	349
5.5.2.	Nullstellensatz	354
5.5.3.	Irreducible Varieties	358
5.5.4.	Primary Decomposition	361
5.6.	Algorithms in $k[x_1, \dots, x_n]$	369
5.6.1.	Monomial Orders	370
5.6.2.	Division Algorithm	376
5.7.	Gröbner Bases	379
5.7.1.	Buchberger’s Algorithm	381
Chapter 6.	Rings	391
6.1.	Modules	391
6.2.	Categories	418
6.3.	Functors	437
6.4.	Free and Projective Modules	450

6.5. Injective Modules	460
6.6. Tensor Products	469
6.7. Adjoint Isomorphisms	488
6.8. Flat Modules	493
6.9. Limits	498
6.10. Adjoint Functors	514
6.11. Galois Theory for Infinite Extensions	518
Chapter 7. Representation Theory	525
7.1. Chain Conditions	525
7.2. Jacobson Radical	534
7.3. Semisimple Rings	539
7.4. Wedderburn–Artin Theorems	550
7.5. Characters	563
7.6. Theorems of Burnside and of Frobenius	590
7.7. Division Algebras	600
7.8. Abelian Categories	614
7.9. Module Categories	626
Chapter 8. Advanced Linear Algebra	635
8.1. Modules over PIDs	635
8.1.1. Divisible Groups	646
8.2. Rational Canonical Forms	655
8.3. Jordan Canonical Forms	664
8.4. Smith Normal Forms	671
8.5. Bilinear Forms	682
8.5.1. Inner Product Spaces	682
8.5.2. Isometries	694
8.6. Graded Algebras	704
8.6.1. Tensor Algebra	706
8.6.2. Exterior Algebra	715
8.7. Determinants	729
8.8. Lie Algebras	743
Chapter 9. Homology	751
9.1. Simplicial Homology	751
9.2. Semidirect Products	757
9.3. General Extensions and Cohomology	765
9.3.1. $H^2(Q, K)$ and Extensions	766
9.3.2. $H^1(Q, K)$ and Conjugacy	774
9.4. Homology Functors	782

9.5. Derived Functors	796
9.5.1. Left Derived Functors	797
9.5.2. Right Derived Covariant Functors	808
9.5.3. Right Derived Contravariant Functors	811
9.6. Ext	815
9.7. Tor	825
9.8. Cohomology of Groups	831
9.9. Crossed Products	848
9.10. Introduction to Spectral Sequences	854
9.11. Grothendieck Groups	858
9.11.1. The Functor K_0	858
9.11.2. The Functor G_0	862
Chapter 10. Commutative Rings III	873
10.1. Local and Global	873
10.1.1. Subgroups of \mathbb{Q}	873
10.2. Localization	881
10.3. Dedekind Rings	899
10.3.1. Integrality	900
10.3.2. Nullstellensatz Redux	908
10.3.3. Algebraic Integers	915
10.3.4. Characterizations of Dedekind Rings	927
10.3.5. Finitely Generated Modules over Dedekind Rings	937
10.4. Homological Dimensions	945
10.5. Hilbert's Theorem on Syzygies	956
10.6. Commutative Noetherian Rings	961
10.7. Regular Local Rings	969
Bibliography	985
Index	991
