Preface	xi
Introduction	xiii
Chapter 1. Probability Spaces	1
§1.1. Sets and Sigma-Fields	1
§1.2. Elementary Properties of Probability Spaces	6
§1.3. The Intuition	8
§1.4. Conditional Probability	15
§1.5. Independence	18
§1.6. Counting: Permutations and Combinations	22
§1.7. The Gambler's Ruin	30
Chapter 2. Random Variables	39
§2.1. Random Variables and Distributions	39
§2.2. Existence of Random Variables	45
§2.3. Independence of Random Variables	48
§2.4. Types of Distributions	49
§2.5. Expectations I: Discrete Random Variables	54
§2.6. Moments, Means and Variances	60
§2.7. Mean, Median, and Mode	63
§2.8. Special Discrete Distributions	65
Chapter 3. Expectations II: The General Case	75
§3.1. From Discrete to Continuous	75

§3.2.	The Expectation as an Integral	81
§3.3.	Some Moment Inequalities	85
§3.4.	Convex Functions and Jensen's Inequality	86
§3.5.	Special Continuous Distributions	89
§3.6.	Joint Distributions and Joint Densities	96
§3.7.	Conditional Distributions, Densities, and Expectations	103
Chapter 4.	Convergence	117
§4.1.	Convergence of Random Variables	117
§4.2.	Convergence Theorems for Expectations	122
§4.3.	Applications	127
Chapter 5.	Laws of Large Numbers	133
§5.1.	The Weak and Strong Laws	134
§5.2.	Normal Numbers	137
§5.3.	Sequences of Random Variables: Existence*	140
§5.4.	Sigma Fields as Information	142
§5.5.	Another Look at Independence	144
§5.6.	Zero-one Laws	145
Chapter 6.	Convergence in Distribution and the CLT	151
§6.1.	Characteristic Functions	151
§6.2.	Convergence in Distribution	162
§6.3.	Lévy's Continuity Theorem	170
§6.4.	The Central Limit Theorem	176
§6.5.	Stable Laws*	182
Chapter 7.	Markov Chains and Random Walks	191
§7.1.	Stochastic Processes	191
§7.2.	Markov Chains	192
§7.3.	Classification of States	201
§7.4.	Stopping Times	204
§7.5.	The Strong Markov Property	208
§7.6.	Recurrence and Transience	211
§7.7.	Equilibrium and the Ergodic Theorem for Markov Chains	218
§7.8.	Finite State Markov Chains	226
§7.9.	Branching Processes	234
§7.10.	The Poisson Process	242

§7.11. Birth and Death Processes*	250
Chapter 8. Conditional Expectations	265
§8.1. Conditional Expectations	265
§8.2. Elementary Properties	268
§8.3. Approximations and Projections	272
Chapter 9. Discrete-Parameter Martingales	275
§9.1. Martingales	275
§9.2. System Theorems	282
§9.3. Convergence	290
§9.4. Uniform Integrability	295
§9.5. Applications	304
§9.6. Financial Mathematics I: The Martingale Connection*	315
Chapter 10. Brownian Motion	335
§10.1. Standard Brownian Motion	336
§10.2. Stopping Times and the Strong Markov Property	344
§10.3. The Zero Set of Brownian Motion	348
§10.4. The Reflection Principle	351
§10.5. Recurrence and Hitting Properties	352
§10.6. Path Irregularity	354
§10.7. The Brownian Infinitesimal Generator*	359
§10.8. Related Processes	363
§10.9. Higher Dimensional Brownian Motion	368
§10.10. Financial Mathematics II: The Black-Scholes Model*	374
§10.11. Skorokhod Embedding*	377
§10.12. Lévy's Construction of Brownian Motion*	388
§10.13. The Ornstein-Uhlenbeck Process*	390
§10.14. White Noise and the Wiener Integral*	394
§10.15. Physical Brownian Motion*	404
§10.16. What Brownian Motion Really Does	410
Bibliography	413
Index	415
