Chapter 1. Introduction and motivation	1
§1.1. Presentation	3
§1.2. Four motivating statements	4
§1.3. Prerequisites and notation	8
Chapter 2. The language of representation theory	13
§2.1. Basic language	13
§2.2. Formalism: changing the space	21
§2.3. Formalism: changing the group	42
§2.4. Formalism: changing the field	65
§2.5. Matrix representations	68
§2.6. Examples	70
§2.7. Some general results	80
§2.8. Some Clifford theory	121
§2.9. Conclusion	124
Chapter 3. Variants	127
§3.1. Representations of algebras	127
§3.2. Representations of Lie algebras	132
§3.3. Topological groups	139
§3.4. Unitary representations	145
Chapter 4. Linear representations of finite groups	159
§4.1. Maschke's Theorem	159

---

§4.2. Applications of Maschke's Theorem	163
§4.3. Decomposition of representations	169
§4.4. Harmonic analysis on finite groups	190
§4.5. Finite abelian groups	200
§4.6. The character table	208
§4.7. Applications	240
§4.8. Further topics	262
Chapter 5. Abstract representation theory of compact groups	269
§5.1. An example: the circle group	269
§5.2. The Haar measure and the regular representation of a locally compact group	272
§5.3. The analogue of the group algebra	288
§5.4. The Peter–Weyl Theorem	294
§5.5. Characters and matrix coefficients for compact groups	304
§5.6. Some first examples	310
Chapter 6. Applications of representations of compact groups	319
§6.1. Compact Lie groups are matrix groups	319
§6.2. The Frobenius–Schur indicator	324
§6.3. The Larsen alternative	332
§6.4. The hydrogen atom	344
Chapter 7. Other groups: a few examples	355
§7.1. Algebraic groups	355
§7.2. Locally compact groups: general remarks	369
§7.3. Locally compact abelian groups	371
§7.4. A non-abelian example: $SL_2(\mathbf{R})$	376
Appendix A. Some useful facts	409
§A.1. Algebraic integers	409
§A.2. The spectral theorem	414
§A.3. The Stone–Weierstrass Theorem	420
Bibliography	421
Index	425
