Introduction	xi
Chapter 1. Affine and Projective Planes	1
§1.1. Preview	1
§1.2. Incidence geometry	2
§1.3. Affine planes	3
§1.4. Projective planes	4
§1.5. Duality	8
§1.6. Exercises	10
Chapter 2. Central Automorphisms of Projective Planes	13
§2.1. Preview	13
§2.2. Projections and automorphisms	14
§2.3. Transvections and dilatations	14
§2.4. Transitivity properties	16
§2.5. Exercises	22
Chapter 3. Coordinates for Projective Planes	23
§3.1. Preview	23
§3.2. Ternary systems	24
§3.3. Two coordinatizations related to $\mathcal{G}(\mathcal{C})$	31
§3.4. Transvections and algebraic properties	33
§3.5. Exercises	40

Chapter 4. Alternative Rings	43
§4.1. Preview	43
§4.2. Left Moufang rings	44
§4.3. Artin's Theorem	47
§4.4. Inverses in alternative rings	49
§4.5. The Cayley-Dickson process	50
§4.6. Composition algebras	54
§4.7. Split and division composition algebras	57
§4.8. Exercises	62
Chapter 5. Configuration Conditions	65
§5.1. Preview	65
§5.2. Desargues condition	66
§5.3. Quadrangle sections	71
§5.4. Pappus condition	75
§5.5. Configurations and central automorphisms	78
§5.6. Exercises	84
Chapter 6. Dimension Theory	87
§6.1. Preview	87
§6.2. Dimensionable sets	88
§6.3. Independence and bases	90
§6.4. Strongly dimensionable sets	94
§6.5. Exercises	96
Chapter 7. Projective Geometries	99
§7.1. Preview	99
§7.2. Projective and nearly projective geometries	100
§7.3. Relation to strongly dimensionable sets	102
§7.4. Classification of projective geometries	104
§7.5. Exercises	112
Chapter 8. Automorphisms of $\mathcal{G}(V)$	115
§8.1. Preview	115
§8.2. The Fundamental Theorem	116
§8.3. Subgroups of $\text{Aut}(\mathcal{G}(V))$	118
§8.4. Simple groups	120
§8.5. Exercises	121

Chapter 9. Quadratic Forms and Orthogonal Groups	123
§9.1. Preview	123
§9.2. Quadratic forms	124
§9.3. Orthogonal groups	126
§9.4. Exercises	129
Chapter 10. Homogeneous Maps	131
§10.1. Preview	131
§10.2. Polarization of homogeneous maps	132
§10.3. Exercises	140
Chapter 11. Norms and Hermitian Matrices	143
§11.1. Preview	143
§11.2. Hermitian matrices and $\text{HE}_n(\mathcal{C})$	144
§11.3. Norms on $\mathcal{H}(\mathcal{C}_n)$	146
§11.4. Transitivity of $\text{HE}_n(\mathcal{C})$	153
§11.5. Trace and adjoint	157
§11.6. $\mathcal{H}(\mathcal{C}_3)$	160
§11.7. Exercises	165
Chapter 12. Octonion Planes	169
§12.1. Preview	169
§12.2. The construction of octonion planes	170
§12.3. Simplicity of $\text{PHE}_3(\mathcal{O})$	174
§12.4. Automorphisms of octonion planes	177
§12.5. Exercises	178
Chapter 13. Projective Remoteness Planes	181
§13.1. Preview	181
§13.2. Definition and examples	182
§13.3. Groups of Steinberg type	186
§13.4. Transvections	192
§13.5. Exercises	195
Chapter 14. Other Geometries	199
§14.1. Preview	199
§14.2. Erlangen program	200
§14.3. The geometry of R -spaces	201

§14.4. Buildings	206
§14.5. Generalized n -gons	209
§14.6. Moufang sets and structurable algebras	213
§14.7. Freudenthal-Tits magic square	214
§14.8. Exercises	218
Bibliography	221
Index	225
