Preface	ix
Chapter 1. Basics of dynamical systems	1
§1.1. Basic concepts	4
§1.2. Topological conjugacy and structural stability	10
§1.3. Circle homeomorphisms	14
§1.4. Conley's fundamental theorem of dynamical systems	18
Exercises	22
Chapter 2. Hyperbolic fixed points	25
§2.1. Hyperbolic linear isomorphisms	25
§2.2. Persistence of hyperbolic fixed points	29
§2.3. Persistence of hyperbolicity for a fixed point	34
§2.4. Hartman-Grobman theorem	41
§2.5. The local stable manifold for a hyperbolic fixed point	45
Exercises	54
Chapter 3. Horseshoes, toral automorphisms, and solenoids	57
§3.1. Symbolic dynamics	57
§3.2. Smale horseshoe	60
§3.3. Anosov toral automorphisms	66
§3.4. The solenoid attractor	70
Exercises	73

---

Chapter 4. Hyperbolic sets	75
§4.1. The concept of hyperbolic set	75
§4.2. Persistence of hyperbolicity for an invariant set	83
§4.3. Smoothness in Lemma 2.17 and Theorem 2.18	89
§4.4. Stable manifolds of hyperbolic sets	95
§4.5. Structural stability of hyperbolic sets	117
§4.6. The shadowing lemma	128
Exercises	134
Chapter 5. Axiom A, no-cycle condition, and $\Omega$ -stability	139
§5.1. Spectral decomposition and Axiom A	139
§5.2. Cycle and $\Omega$ -explosion	145
§5.3. No-cycle and $\Omega$ -stability	147
§5.4. Equivalent descriptions	150
Exercises	154
Chapter 6. Quasi-hyperbolicity and linear transversality	157
§6.1. The simplest setting	157
§6.2. Quasi-hyperbolicity	158
§6.3. Linear transversality	166
§6.4. Applications	168
§6.5. A glimpse of the stability conjectures	172
Exercises	180
Bibliography	181
Index	189
