Introduction to the Series	xiii
Preface	xvii
Notation	xix
Part 1. Fundamentals	
Chapter 1. Random Variables	3
§1.1. Elementary Examples	3
§1.2. Probability Space	5
§1.3. Conditional Probability	6
§1.4. Discrete Distributions	7
§1.5. Continuous Distributions	8
§1.6. Independence	12
§1.7. Conditional Expectation	14
§1.8. Notions of Convergence	16
§1.9. Characteristic Function	17
§1.10. Generating Function and Cumulants	19
§1.11. The Borel-Cantelli Lemma	21
Exercises	24
Notes	27
Chapter 2. Limit Theorems	29
§2.1. The Law of Large Numbers	29
§2.2. Central Limit Theorem	31

§2.3. Cramér's Theorem for Large Deviations	32
§2.4. Statistics of Extrema	40
Exercises	42
Notes	44
Chapter 3. Markov Chains	45
§3.1. Discrete Time Finite Markov Chains	46
§3.2. Invariant Distribution	48
§3.3. Ergodic Theorem for Finite Markov Chains	51
§3.4. Poisson Processes	53
§3.5. Q -processes	54
§3.6. Embedded Chain and Irreducibility	57
§3.7. Ergodic Theorem for Q -processes	59
§3.8. Time Reversal	59
§3.9. Hidden Markov Model	61
§3.10. Networks and Markov Chains	67
Exercises	71
Notes	73
Chapter 4. Monte Carlo Methods	75
§4.1. Numerical Integration	76
§4.2. Generation of Random Variables	77
§4.3. Variance Reduction	83
§4.4. The Metropolis Algorithm	87
§4.5. Kinetic Monte Carlo	91
§4.6. Simulated Tempering	92
§4.7. Simulated Annealing	94
Exercises	96
Notes	98
Chapter 5. Stochastic Processes	101
§5.1. Axiomatic Construction of Stochastic Process	102
§5.2. Filtration and Stopping Time	104
§5.3. Markov Processes	106
§5.4. Gaussian Processes	109
Exercises	113
Notes	114

Chapter 6. Wiener Process	117
§6.1. The Diffusion Limit of Random Walks	118
§6.2. The Invariance Principle	120
§6.3. Wiener Process as a Gaussian Process	121
§6.4. Wiener Process as a Markov Process	125
§6.5. Properties of the Wiener Process	126
§6.6. Wiener Process under Constraints	130
§6.7. Wiener Chaos Expansion	132
Exercises	135
Notes	137
Chapter 7. Stochastic Differential Equations	139
§7.1. Itô Integral	140
§7.2. Itô's Formula	144
§7.3. Stochastic Differential Equations	148
§7.4. Stratonovich Integral	154
§7.5. Numerical Schemes and Analysis	156
§7.6. Multilevel Monte Carlo Method	162
Exercises	165
Notes	167
Chapter 8. Fokker-Planck Equation	169
§8.1. Fokker-Planck Equation	170
§8.2. Boundary Condition	173
§8.3. The Backward Equation	175
§8.4. Invariant Distribution	176
§8.5. The Markov Semigroup	178
§8.6. Feynman-Kac Formula	180
§8.7. Boundary Value Problems	181
§8.8. Spectral Theory	183
§8.9. Asymptotic Analysis of SDEs	185
§8.10. Weak Convergence	188
Exercises	193
Notes	194

Part 2. Advanced Topics

Chapter 9. Path Integral	199
§9.1. Formal Wiener Measure	200
§9.2. Girsanov Transformation	203
§9.3. Feynman-Kac Formula Revisited	207
Exercises	208
Notes	208
Chapter 10. Random Fields	209
§10.1. Examples of Random Fields	210
§10.2. Gaussian Random Fields	212
§10.3. Gibbs Distribution and Markov Random Fields	214
Exercise	216
Notes	216
Chapter 11. Introduction to Statistical Mechanics	217
§11.1. Thermodynamic Heuristics	219
§11.2. Equilibrium Statistical Mechanics	224
§11.3. Generalized Langevin Equation	233
§11.4. Linear Response Theory	236
§11.5. The Mori-Zwanzig Reduction	238
§11.6. Kac-Zwanzig Model	240
Exercises	242
Notes	244
Chapter 12. Rare Events	245
§12.1. Metastability and Transition Events	246
§12.2. WKB Analysis	248
§12.3. Transition Rates	249
§12.4. Large Deviation Theory and Transition Paths	250
§12.5. Computing the Minimum Energy Paths	253
§12.6. Quasipotential and Energy Landscape	254
Exercises	259
Notes	260

Chapter 13. Introduction to Chemical Reaction Kinetics	261
§13.1. Reaction Rate Equations	262
§13.2. Chemical Master Equation	263
§13.3. Stochastic Differential Equations	265
§13.4. Stochastic Simulation Algorithm	266
§13.5. The Large Volume Limit	266
§13.6. Diffusion Approximation	268
§13.7. The Tau-leaping Algorithm	269
§13.8. Stationary Distribution	271
§13.9. Multiscale Analysis of a Chemical Kinetic System	272
Exercises	277
Notes	277
Appendix	279
A. Laplace Asymptotics and Varadhan's Lemma	279
B. Gronwall's Inequality	281
C. Measure and Integration	282
D. Martingales	284
E. Strong Markov Property	285
F. Semigroup of Operators	286
Bibliography	289
Index	301
