Preface	ix
<b>Part 1. Riemannian geometry</b>	
Chapter 1. Scalar curvature	3
§1.1. Notation and review of Riemannian geometry	3
§1.2. A survey of scalar curvature results	17
Chapter 2. Minimal hypersurfaces	23
§2.1. Basic definitions and the Gauss-Codazzi equations	23
§2.2. First and second variation of volume	26
§2.3. Minimizing hypersurfaces and positive scalar curvature	38
§2.4. More scalar curvature rigidity theorems	54
Chapter 3. The Riemannian positive mass theorem	63
§3.1. Background	63
§3.2. Special cases of the positive mass theorem	76
§3.3. Reduction to Theorem 1.30	86
§3.4. A few words on Ricci flow	104
Chapter 4. The Riemannian Penrose inequality	107
§4.1. Riemannian apparent horizons	107
§4.2. Inverse mean curvature flow	121
§4.3. Bray's conformal flow	142
Chapter 5. Spin geometry	159

---

§5.1. Background	159
§5.2. The Dirac operator	166
§5.3. Witten's proof of the positive mass theorem	169
§5.4. Related results	175
Chapter 6. Quasi-local mass	181
§6.1. Bartnik mass and static metrics	181
§6.2. Bartnik minimizers	187
§6.3. Brown-York mass	193
§6.4. Bartnik data with $\eta = 0$	199
<b>Part 2. Initial data sets</b>	
Chapter 7. Introduction to general relativity	207
§7.1. Spacetime geometry	207
§7.2. The Einstein field equations	214
§7.3. The Einstein constraint equations	221
§7.4. Black holes and Penrose incompleteness	228
§7.5. Marginally outer trapped surfaces	240
§7.6. The Penrose inequality	249
Chapter 8. The spacetime positive mass theorem	255
§8.1. Proof for $n < 8$	256
§8.2. Spacetime positive mass rigidity	275
§8.3. Proof for spin manifolds	275
Chapter 9. Density theorems for the constraint equations	285
§9.1. The constraint operator	285
§9.2. The density theorem for vacuum constraints	292
§9.3. The density theorem for DEC (Theorem 8.3)	295
Appendix A. Some facts about second-order linear elliptic operators	301
§A.1. Basics	301
§A.2. Weighted spaces on asymptotically flat manifolds	318
§A.3. Inverse function theorem and Lagrange multipliers	337
Bibliography	343
Index	359
