Preface	xiii
A Guide for the Reader	xv
The heat equation (Chapter 1)	xv
Curve shortening flow (Chapters 2–4)	xv
Mean curvature flow (Chapters 5–14)	xvi
Gauß curvature flows (Chapters 15–17)	xix
Fully nonlinear curvature flows (Chapters 18–20)	xx
Acknowledgments	xx
Suggested Course Outlines	xxiii
Notation and Symbols	xxv
Chapter 1. The Heat Equation	1
§1.1. Introduction	1
§1.2. Gradient flow	3
§1.3. Invariance properties	3
§1.4. The maximum principle	8
§1.5. Well-posedness	12
§1.6. Asymptotic behavior	14
§1.7. The Bernstein method	17
§1.8. The Harnack inequality	17
§1.9. Further monotonicity formulae	19
§1.10. Sharp gradient estimates	21

§1.11. Notes and commentary	29
§1.12. Exercises	33
Chapter 2. Introduction to Curve Shortening	37
§2.1. Basic geometric theory of planar curves	38
§2.2. Curve shortening flow	42
§2.3. Graphs of functions	45
§2.4. The support function	48
§2.5. Short-time existence	50
§2.6. Smoothing	51
§2.7. Global existence	54
§2.8. Notes and commentary	59
§2.9. Exercises	59
Chapter 3. The Gage–Hamilton–Grayson Theorem	63
§3.1. The avoidance principle	64
§3.2. Preserving embeddedness	66
§3.3. Huisken’s distance comparison estimate	68
§3.4. A curvature bound by distance comparison	74
§3.5. Grayson’s theorem	82
§3.6. Singularities of immersed solutions	88
§3.7. Notes and commentary	90
§3.8. Exercises	92
Chapter 4. Self-Similar and Ancient Solutions	95
§4.1. Invariance properties	95
§4.2. Self-similar solutions	96
§4.3. Monotonicity formulae	102
§4.4. Ancient solutions	110
§4.5. Classification of convex ancient solutions on S^1	116
§4.6. Notes and commentary	122
§4.7. Exercises	123
Chapter 5. Hypersurfaces in Euclidean Space	125
§5.1. Parametrized hypersurfaces	125
§5.2. Alternative representations of hypersurfaces	143
§5.3. Dynamical properties	152
§5.4. Curvature flows	164

§5.5. Notes and commentary	169
§5.6. Exercises	169
Chapter 6. Introduction to Mean Curvature Flow	173
§6.1. The mean curvature flow	173
§6.2. Invariance properties and self-similar solutions	176
§6.3. Evolution equations	179
§6.4. Short-time existence	184
§6.5. The maximum principle	189
§6.6. The avoidance principle	192
§6.7. Preserving embeddedness	196
§6.8. Long-time existence	197
§6.9. Weak solutions	206
§6.10. Notes and commentary	215
§6.11. Exercises	219
Chapter 7. Mean Curvature Flow of Entire Graphs	223
§7.1. Introduction	223
§7.2. Preliminary calculations	224
§7.3. The Dirichlet problem	227
§7.4. A priori height and gradient estimates	228
§7.5. Local a priori estimates for the curvature	232
§7.6. Proof of Theorem 7.1	238
§7.7. Convergence to self-similarly expanding solutions	239
§7.8. Self-similarly shrinking entire graphs	240
§7.9. Notes and commentary	240
§7.10. Exercises	241
Chapter 8. Huisken's Theorem	243
§8.1. Pinching is preserved	244
§8.2. Pinching improves: The roundness estimate	246
§8.3. A gradient estimate for the curvature	256
§8.4. Huisken's theorem	259
§8.5. Regularity of the arrival time	266
§8.6. Huisken's theorem via width pinching	267
§8.7. Notes and commentary	274
§8.8. Exercises	278

Chapter 9. Mean Convex Mean Curvature Flow	281
§9.1. Singularity formation	281
§9.2. Preserving pinching conditions	284
§9.3. Pinching improves: Convexity and cylindrical estimates	294
§9.4. A natural class of initial data	301
§9.5. A gradient estimate for the curvature	303
§9.6. Notes and commentary	308
§9.7. Exercises	309
Chapter 10. Monotonicity Formulae	311
§10.1. Huisken's monotonicity formula	311
§10.2. Hamilton's Harnack estimate	319
§10.3. Notes and commentary	338
§10.4. Exercises	342
Chapter 11. Singularity Analysis	345
§11.1. Local uniform convergence of mean curvature flows	345
§11.2. Neck detection	354
§11.3. The Brakke–White regularity theorem	363
§11.4. Huisken's theorem revisited	366
§11.5. The structure of singularities	371
§11.6. Notes and commentary	389
§11.7. Exercises	394
Chapter 12. Noncollapsing	395
§12.1. The inscribed and exscribed curvatures	395
§12.2. Differential inequalities for the inscribed and exscribed curvatures	402
§12.3. The Gage–Hamilton and Huisken theorems via noncollapsing	412
§12.4. The Haslhofer–Kleiner curvature estimate	415
§12.5. Notes and commentary	421
§12.6. Exercises	422
Chapter 13. Self-Similar Solutions	425
§13.1. Shrinkers — an introduction	425
§13.2. The Gaussian area functional	426
§13.3. Mean convex shrinkers	431

§13.4.	Compact embedded self-shrinking surfaces	443
§13.5.	Translators — an introduction	452
§13.6.	The Dirichlet problem for graphical translators	454
§13.7.	Cylindrical translators	455
§13.8.	Rotational translators	456
§13.9.	The convexity estimates of Spruck, Sun, and Xiao	462
§13.10.	Asymptotics	468
§13.11.	X.-J. Wang's dichotomy	469
§13.12.	Rigidity of the bowl soliton	470
§13.13.	Flying wings	477
§13.14.	Bowloids	490
§13.15.	Notes and commentary	492
§13.16.	Exercises	499
Chapter 14.	Ancient Solutions	503
§14.1.	Rigidity of the shrinking sphere	504
§14.2.	A convexity estimate	509
§14.3.	A gradient estimate for the curvature	511
§14.4.	Asymptotics	513
§14.5.	X.-J. Wang's dichotomy	516
§14.6.	Ancient solutions to curve shortening flow revisited	525
§14.7.	Ancient ovaloids	531
§14.8.	Ancient pancakes	533
§14.9.	Notes and commentary	536
§14.10.	Exercises	540
Chapter 15.	Gauß Curvature Flows	543
§15.1.	Invariance properties and self-similar solutions	545
§15.2.	Basic evolution equations	546
§15.3.	Chou's long-time existence theorem	548
§15.4.	Differential Harnack estimates	558
§15.5.	Firey's conjecture	560
§15.6.	Variational structure and entropy formulae	570
§15.7.	Notes and commentary	578
§15.8.	Exercises	578

Chapter 16. The Affine Normal Flow	581
§16.1. Affine invariance	582
§16.2. Affine-renormalized solutions	586
§16.3. Convergence and the limit flow	590
§16.4. Self-similarly shrinking solutions are ellipsoids	590
§16.5. Convergence without affine corrections	593
§16.6. Notes and commentary	601
§16.7. Exercises	602
Chapter 17. Flows by Superaffine Powers of the Gauß Curvature	607
§17.1. Bounds on diameter, speed, and inradius	607
§17.2. Convergence to a shrinking self-similar solution	613
§17.3. Shrinking self-similar solutions are round	618
§17.4. Notes and commentary	633
§17.5. Exercises	635
Chapter 18. Fully Nonlinear Curvature Flows	639
§18.1. Introduction	639
§18.2. Symmetric functions and their differentiability properties	641
§18.3. Examples	650
§18.4. Short-time existence	655
§18.5. The avoidance principle	658
§18.6. Differential Harnack estimates	660
§18.7. Entropy estimates	664
§18.8. Alexandrov reflection	670
§18.9. Notes and commentary	682
§18.10. Exercises	683
Chapter 19. Flows of Mean Curvature Type	687
§19.1. Convex hypersurfaces contract to round points	687
§19.2. Evolving nonconvex hypersurfaces	698
§19.3. Notes and commentary	708
§19.4. Exercises	709
Chapter 20. Flows of Inverse-Mean Curvature Type	711
§20.1. Convex hypersurfaces expand to round infinity	711
§20.2. Notes and commentary	723
§20.3. Exercises	724
