Preface	xi
Acknowledgments	xiii
Chapter 1. Polynomial Rings	1
§1.1. Ideals	1
§1.2. Gröbner Bases	6
§1.3. Dimension and Degree	12
Exercises	17
Chapter 2. Varieties	19
§2.1. Affine Varieties	19
§2.2. Projective Varieties	27
§2.3. Geometry in Low Dimensions	31
Exercises	36
Chapter 3. Solving and Decomposing	39
§3.1. 0-Dimensional Ideals	39
§3.2. Primary Decomposition	43
§3.3. Linear PDEs with Constant Coefficients	49
Exercises	55
Chapter 4. Mapping and Projecting	57
§4.1. Elimination	57
§4.2. Implicitization	61
§4.3. The Image of a Polynomial Map	66
Exercises	71

---

Chapter 5. Linear Spaces and Grassmannians	73
§5.1. Coordinates for Linear Spaces	73
§5.2. Plücker Relations	76
§5.3. Schubert Calculus	79
Exercises	84
Chapter 6. Nullstellensätze	87
§6.1. Certificates for Infeasibility	87
§6.2. Hilbert's Nullstellensatz	90
§6.3. Let's Get Real	92
Exercises	96
Chapter 7. Tropical Algebra	99
§7.1. Arithmetic and Valuations	99
§7.2. Linear Algebra	104
§7.3. Tropical Varieties	109
Exercises	113
Chapter 8. Toric Varieties	115
§8.1. The Affine Story	115
§8.2. Varieties from Polytopes	121
§8.3. The World Is Toric	126
Exercises	130
Chapter 9. Tensors	133
§9.1. Eigenvectors	133
§9.2. Tensor Rank	140
§9.3. Matrix Multiplication	146
Exercises	149
Chapter 10. Representation Theory	151
§10.1. Groups, Representations and Characters	151
§10.2. Invertible Matrices and Permutations	158
§10.3. Exploiting Symmetry	164
Exercises	169

---

Chapter 11. Invariant Theory	171
§11.1. Finite Groups	171
§11.2. Classical Invariant Theory	176
§11.3. Geometric Invariant Theory	179
Exercises	184
Chapter 12. Semidefinite Programming	187
§12.1. Spectrahedra	187
§12.2. Optimization and Duality	191
§12.3. Sums of Squares	196
Exercises	200
Chapter 13. Combinatorics	201
§13.1. Matroids	201
§13.2. Lattice Polytopes	206
§13.3. Generating Functions	211
Exercises	216
Bibliography	219
Index	223
