
Index

- a priori estimates, 13, 20, 25, 33, 35, 118, 178, 231
- action functional, 111, 133, 182, 208, 209, 277, 279
- admissible path, 68, 85, 111
- Alexandrov theorem, 62, 192
- almost periodic setting, 176
- ansatz, 111–113, 117, 118, 165, 251
- approximate corrector, 168, 170–174
- asymptotic expansion, 113, 118, 156, 165, 250–252, 259
- Aubry set, 204, 233–236, 238, 242, 244, 256
- Aubry–Mather theory, 202, 244, 259, 294

- backward characteristic, 188–190, 192, 193, 197–200, 205, 211, 212, 214, 216, 221, 242, 256
- Bernstein method, 25, 28, 39, 43, 44, 225, 229, 301
- boundary value problem, 49, 283, 284
- Burgers equation, 68

- calculus of variations, 53, 278, 281
- Cauchy problem, 2, 5, 12, 21, 22, 24, 31, 32, 34–36, 48, 64, 75–77, 117, 120, 124, 128, 152, 164, 170, 174, 189, 190, 202, 203, 205, 210, 228, 229, 244
- cell problem, 113–117, 119–121, 123–125, 137, 138, 144, 153, 155, 156, 158–161, 165, 168, 169, 177, 183, 185–188, 192, 202, 205, 207, 210, 211, 216, 223, 233, 245, 248, 256, 293, 295, 309
- circle homeomorphism, 294
- classical mechanics Hamiltonian, 17, 51, 61, 132
- coercive Hamiltonian, 136, 141, 293
- comparison principle, 16, 19, 21, 22, 24, 25, 33, 35, 37, 38, 92, 115, 122–125, 153, 167, 168, 173, 182, 195, 229, 237, 300, 301, 309
- conservation laws, 48, 107, 108
- control set, 52, 178, 179
- convex cone, 180–184, 250
- convex Hamiltonian, 45, 51, 111, 132, 162
- convolution, 72, 73, 126, 175, 191, 223, 239, 258, 263
- corrector, 118, 155, 156, 168–170, 174, 176
- corrector problem, 113

- decomposition formula, 150
- degenerate viscous Hamilton–Jacobi equation, 113, 204
- differential games, 2, 89, 92, 98, 108
- Dirac delta, 43, 181, 184, 231
- Dirichlet boundary problem, 286
- discount factor, 53
- doubling variables method, 17, 38–40, 155
- Dynamic Programming Principle, 55, 57, 65, 66, 82, 93, 189, 306, 307

- effective equation, 110, 113, 117, 118, 120, 152, 163, 170, 194
 effective Hamiltonian, 114, 121, 123, 126, 131, 132, 134, 136, 138–140, 142–145, 147, 150–152, 156, 162, 166, 172–174, 182, 247, 252, 254, 258, 259
 eikonal equation, 5, 12, 21, 71, 74
 elliptic equation, 49
 envelope, 29, 103, 265
 ergodic constant, 204
 ergodic problem, 113, 258
 Euler–Lagrange equation, 135, 209, 212, 213, 281
 Euler–Lagrange flow, 243
 evaluation cone, 179
 evenness, 130, 131, 137, 144, 147, 150, 151, 162

 fast scale variable, 110
 Fekete lemma, 125
 finite difference approximation, 104
 finite speed of propagation, 36
 first exit time, 287
 first-order equation, 6, 48, 74, 104, 283, 298
 flat part, 128, 130–132, 134, 250
 flow invariant property, 213, 214, 219–221
 front propagation, 2, 3, 37, 69, 70, 84, 86, 202, 254
 fundamental solution, 43, 49, 77, 231
 fundamental theorem of calculus, 45, 58, 302

 G-equation, 3, 4, 48
 global characteristic, 295, 296
 gradient jump, 151, 297
 gradient shock structure, 39, 48
 Gronwall inequality, 53, 96, 303

 Hamilton–Jacobi equations, 1, 2, 5, 47, 51, 70, 73, 74, 89, 98, 108, 109, 113, 116, 117, 123, 152, 161, 163, 176, 177, 204, 245
 Hamiltonian system, 207, 209, 281
 Hedlund example, 254, 256, 259
 holonomic measure, 185, 220
 homogenization theory, 109, 110, 148, 163, 194, 202
 Hopf formula, 101, 103, 108
 Hopf–Lax formula, 67–69, 76, 77, 103, 197, 198, 291

 inf-convolution, 289, 291
 inf-sup convolutions, 292
 inf-sup formula, 126, 127, 130–132, 138, 151, 162, 174–176, 255
 infinite horizon problem, 52
 initial value problem, 2, 91, 100
 Isaacs equation, 92

 Jensen inequality, 68, 72, 102, 196

 KAM theory, 208

 Lagrangian, 63, 64, 67, 69, 81, 84, 128, 178, 188, 195, 207, 209, 238, 247, 277
 large time average, 111, 124, 125, 128, 174, 190, 205, 215, 228
 large time behavior, 5, 49, 244
 Lax–Oleinik formula, 69, 87
 Lax–Oleinik semigroup, 210
 Legendre transform, 60, 63, 64, 67, 82, 101, 111, 178, 195, 220, 240, 271, 285, 287, 305
 level set method, 2, 48
 level-set quasiconvexity, 75, 81, 138
 linearized operator, 42, 45, 46, 224, 226, 231
 Lipschitz continuity, 52
 Lipschitz estimate, 34, 35, 163, 172
 Lipschitz regularity, 125
 lower semicontinuity, 268, 279
 lower value, 91, 93, 98

 macroscopic scale, 110
 macroscopic variable, 112, 113, 165
 Mather measure, 215, 216, 221–224, 226, 228, 231, 232, 248
 Mather set, 215, 242, 256, 294
 maximal subsolution, 77, 78, 85–87, 233
 maximum principle, 6, 7, 27, 47, 229
 mean curvature flow, 4
 mean value theorem, 297
 mesh size, 105–107
 microscopic scale, 110
 microscopic variable, 112, 113, 165
 microstructure, 109, 110
 minimax condition, 93, 98
 minimizer, 64, 189, 208–210, 244, 277–281
 Minty trick, 48

- monotone and consistent scheme, 104, 107, 108
 multiscale problem, 110
 Neumann boundary problem, 287, 288
 nonanticipating, 90
 nonconvex Hamiltonian, 42, 48, 89, 162
 nondecomposable, 150
 nonlinear adjoint method, 39, 40, 42, 44, 47, 48, 204, 224, 231, 232, 245
 optimal control formula, 63, 68, 81, 87, 178, 189, 196, 198, 205, 210
 optimal control theory, 2, 51, 87
 optimal path, 64, 133, 135, 182, 190
 optimal rate of convergence, 110, 162, 194, 205, 259
 parabolic equation, 5, 6, 25, 27, 49, 231
 payoff functional, 89, 90
 periodic setting, 165, 172, 233, 283
 Perron method, 20, 28–30, 32, 34, 48, 71, 78, 234, 235
 perturbed test function method, 117–120, 155, 161
 positively homogeneous, 202, 293
 quasiconcavity, 138, 268
 quasiconvexification, 148–150, 162
 Rademacher theorem, 14, 15, 73, 74
 Radon measure, 179
 rate of convergence, 38, 39, 42, 44, 47, 124, 125, 152, 153, 156, 162, 176, 192, 194, 205
 regularizing effect, 291
 relaxation, 213
 representation formula, 63, 64, 69, 70, 77, 81, 84–86, 98–101, 103, 110, 111, 123, 126, 136, 138, 142, 144, 145, 147, 148, 161, 174, 177–180, 182, 183, 185, 204, 235, 238, 285–287
 Riesz representation theorem, 179
 rotation vector, 256
 running cost, 53
 running payoff, 90
 second-order equation, 48
 selection problem, 49, 116, 185, 204
 Sion minimax theorem, 181, 184, 204, 267, 269
 slow scale variable, 110
 stability result, 72, 73, 77, 104, 115, 122, 159
 stable norm, 255, 256, 259
 standard mollifier, 72, 73, 82, 126, 175, 191, 220, 228, 239, 248, 258, 263, 299
 state-constraint boundary problem, 284–286
 static problem, 2, 16, 28, 38, 42, 70, 115, 202, 205
 strategies, 90
 strict convexity, 247, 259
 subdifferential, 9, 10, 262
 subgradient, 62
 sup-convolution, 289, 291
 superdifferential, 9, 10, 263
 supergradient, 74
 superlinear Hamiltonian, 291
 terminal payoff, 90
 terminal value problem, 91, 98
 torus, 111, 166, 177, 208, 257, 261, 277
 uniform convexity, 177, 227, 248
 uniqueness result, 16, 20, 21, 232
 uniqueness set, 216, 238
 upper semicontinuity, 268
 upper value, 91, 93, 98
 value function, 53–55, 57, 65
 vanishing discount problem, 166, 185, 187, 204
 vanishing viscosity method, 5, 12, 14, 15, 20, 31, 48
 vanishing viscosity process, 38, 39, 42, 48, 284
 viscosity solution, 1, 5–7, 9, 10, 12–16, 19–21, 24, 28–32, 34–36, 39, 41, 43–45, 47–49, 53, 56, 57, 63, 66, 67, 69–71, 73, 74, 76, 78, 79, 83, 86, 87, 91, 92, 99–101, 103, 104, 108, 114, 115, 117–120, 124, 126, 129, 139, 151, 152, 154, 157, 158, 160, 166, 167, 169, 170, 174, 180, 187, 188, 194, 197–200, 210, 225, 235, 236, 253
 viscosity subsolution, 7, 8, 10, 12, 14–16, 18, 19, 21, 23, 28–31, 33, 36, 37, 70–74, 78, 79, 82, 83, 86, 91, 96, 97, 105, 118, 119, 124, 138, 145, 202, 203, 205, 230, 237, 253, 283, 284, 291

viscosity supersolution, 7, 10, 12, 14,
16, 18, 19, 23, 29, 30, 33, 74, 75,
91, 97, 114, 119, 137, 234, 284

wave type problem, 75

weak KAM theory, 204, 207–209, 223,
224, 238, 244, 247, 256, 259
