|---|------|
| Preface | xiii |
| Chapter 1. Introduction | 1 |
| Chapter 2. Preliminaries | 5 |
| §1. Method of Characteristics | 5 |
| §2. Development of Singularities | 7 |
| §3. Weak Solutions, Rankine-Hugoniot Condition | 9 |
| §4. Expansion Waves | 13 |
| §5. Non-uniqueness, Entropy Condition | 16 |
| §6. Notes | 18 |
| §7. Exercises | 19 |
| Chapter 3. Scalar Convex Conservation Laws | 21 |
| §1. Riemann Problem | 22 |
| §2. Hopf Equation | 24 |
| §3. Wave Interactions, Constructing Solutions | 26 |
| §4. Well-Posedness Theory | 32 |
| §5. Generalized Characteristics, Nonlinear Regularization | 40 |
| §6. N -Waves, Inviscid Dissipation | 50 |
| §7. Entropy Pairs | 57 |
| §8. Generalized Entropy Functional | 59 |
| §9. Notes | 68 |
| §10. Exercises | 69 |

| | |
|--|-----|
| Chapter 4. Burgers Equation | 71 |
| §1. Heat Equation | 71 |
| §2. Hopf-Cole Transformation | 78 |
| §3. Inviscid Limit | 79 |
| §4. Nonlinear Waves | 81 |
| §5. Linearized Hopf-Cole Transformation | 84 |
| §6. Green's Functions | 85 |
| §7. Nonlinearity | 92 |
| §8. Metastable States | 98 |
| §9. Notes | 100 |
| §10. Exercises | 100 |
| Chapter 5. General Scalar Conservation Laws | 103 |
| §1. Viscous Shock Profiles | 103 |
| §2. Riemann Problem | 106 |
| §3. L_1 Stability | 109 |
| §4. Scattering Wave Patterns | 111 |
| §5. Entropy Pairs | 113 |
| §6. Multi-Dimensional Laws | 117 |
| §7. Notes | 120 |
| §8. Exercises | 120 |
| Chapter 6. Systems of Hyperbolic Conservation Laws: General Theory | 123 |
| §1. Hyperbolicity | 124 |
| §2. Entropy and Symmetry | 126 |
| §3. Symmetry and Energy Estimate | 128 |
| §4. Local Existence of Smooth Solutions | 132 |
| §5. Euler Equations in Gas Dynamics | 136 |
| §6. Shock Waves | 141 |
| §7. Notes | 144 |
| §8. Exercises | 145 |
| Chapter 7. Riemann Problem | 147 |
| §1. Linear System | 148 |
| §2. Simple Waves | 149 |
| §3. Hugoniot Curves | 152 |
| §4. Riemann Problem I | 158 |

| | |
|--|-----|
| §5. Examples I | 164 |
| §6. Riemann Problem II | 170 |
| §7. Examples II | 175 |
| §8. Notes | 178 |
| §9. Exercises | 178 |
| Chapter 8. Wave Interactions | 181 |
| §1. Interaction of Infinitesimal Waves | 181 |
| §2. A 2×2 System and Coordinates of Riemann Invariants | 183 |
| §3. A 3×3 System | 191 |
| §4. General Analysis | 194 |
| §5. Notes | 201 |
| §6. Exercises | 202 |
| Chapter 9. Well-Posedness Theory | 205 |
| §1. Glimm Scheme | 207 |
| §2. Nonlinear Functional | 211 |
| §3. Wave Tracing | 218 |
| §4. Existence Theory | 230 |
| §5. Stability Theory | 233 |
| §6. Generalized Characteristics and Expansion of Rarefaction Waves | 243 |
| §7. Large-Time Behavior | 249 |
| §8. Regularity | 254 |
| §9. Decay and N -Waves | 260 |
| §10. Some Basics of Numerical Computations | 272 |
| §11. Notes | 273 |
| §12. Exercises | 276 |
| Chapter 10. Viscosity | 279 |
| §1. Nonlinear Waves for Scalar Laws | 280 |
| §2. Wave Interaction for Systems | 292 |
| §3. Physical Models | 301 |
| §4. The p -System | 302 |
| §5. General Dissipative Systems | 313 |
| §6. Notes | 314 |
| §7. Exercises | 315 |

| | |
|--|-----|
| Chapter 11. Relaxation | 317 |
| §1. A Simple Relaxation Model | 318 |
| §2. Examples | 326 |
| §3. Gas In Thermal Non-equilibrium | 330 |
| §4. The Boltzmann Equation in Kinetic Theory | 334 |
| §5. Notes | 346 |
| §6. Exercises | 347 |
| Chapter 12. Nonlinear Resonance | 349 |
| §1. Moving Source | 350 |
| §2. Sub-shocks | 357 |
| §3. Non-strict Hyperbolicity | 361 |
| §4. Vacuum | 368 |
| §5. Boundary | 373 |
| §6. Kinetic Boundary Layers and Fluid-like Waves | 379 |
| §7. Shock Profiles for Difference Schemes | 380 |
| §8. Notes | 384 |
| §9. Exercises | 386 |
| Chapter 13. Multi-Dimensional Gas Flows | 387 |
| §1. Linear Waves | 388 |
| §2. Discontinuity Waves | 390 |
| §3. Potential Flows | 393 |
| §4. Self-Similar Flows and the Ellipticity Principle | 395 |
| §5. Characteristics and Simple Waves | 399 |
| §6. Hodograph Transformation | 401 |
| §7. The Shock Polar | 403 |
| §8. Prandtl Paradox | 407 |
| §9. Notes | 413 |
| §10. Exercises | 413 |
| Chapter 14. Concluding Remarks | 415 |
| §1. Development of Singularities | 415 |
| §2. Local and Global Behavior for Gas Flows with Shock Waves | 416 |
| §3. Nonlinear Waves for Viscous Conservation Laws | 418 |
| §4. Well-Posedness Theory for Weak Solutions | 421 |
| §5. Kinetic Theory and Fluid Dynamics | 423 |

| | |
|----------------------|-----|
| §6. Multiple Effects | 425 |
| Bibliography | 427 |
| Index | 435 |
