Preface	xiii
List of Notations and Symbols	xvii
List of Conventions	xix
Part 1. Basic Concepts	
Chapter 1. Poisson Brackets	3
§1.1. Poisson brackets	3
§1.2. Orbits	5
§1.3. Poisson and Hamiltonian diffeomorphisms	6
§1.4. Examples	8
§1.5. Poisson actions and quotients	14
Problems	19
Chapter 2. Poisson Bivectors	23
§2.1. The point of view of bivectors	23
§2.2. A slight twist: π^\sharp	28
§2.3. Poisson maps and bivector fields	30
§2.4. Examples	31
Problems	40
Chapter 3. Local Structure of Poisson Manifolds	43
§3.1. The Weinstein Splitting Theorem	43
§3.2. Regular points	46

§3.3. Singular points	47
§3.4. The isotropy Lie algebra	50
§3.5. Linearization of Poisson structures	53
Problems	55
Notes and References for Part 1	59
Part 2. Poisson Geometry Around Leaves	
Chapter 4. Symplectic Leaves and the Symplectic Foliation	63
§4.1. The symplectic foliation	63
§4.2. Regular Poisson structures	69
§4.3. More examples of symplectic foliations	73
§4.4. The coupling construction	76
Problems	81
Chapter 5. Poisson Transversals	85
§5.1. Slices and Poisson transversals	85
§5.2. The transverse Poisson structure to a leaf	91
§5.3. Poisson maps and Poisson transversals	95
Problems	97
Chapter 6. Symplectic Realizations	101
§6.1. Definition	101
§6.2. Examples	103
§6.3. Symplectic realizations of linear Poisson structures	111
§6.4. Libermann's Theorem and dual pairs	117
§6.5. Local existence	124
Problems	129
Chapter 7. Dirac Geometry	133
§7.1. Constant Dirac structures	134
§7.2. Dirac structures	137
§7.3. Pullbacks of Dirac structures	142
§7.4. Pushforwards of Dirac structures	145
§7.5. Gauge equivalences	149
Problems	153

Chapter 8. Submanifolds in Poisson Geometry	157
§8.1. Poisson submanifolds	157
§8.2. Poisson-Dirac submanifolds	165
§8.3. Coregular Poisson-Dirac submanifolds	169
§8.4. Coisotropic submanifolds	172
§8.5. Example: Fixed point sets	180
§8.6. Pre-Poisson submanifolds	184
Problems	189
Notes and References for Part 2	193
Part 3. Global Aspects	
Chapter 9. Poisson Cohomology	197
§9.1. The cotangent Lie algebroid	197
§9.2. The Poisson differential and Poisson cohomology	200
§9.3. Low degrees	201
§9.4. Shadows of Poisson cohomology	206
§9.5. The cohomological obstruction to linearization	213
Problems	218
Chapter 10. Poisson Homotopy	223
§10.1. Cotangent paths	223
§10.2. Cotangent maps	225
§10.3. Integration and the contravariant Stokes Theorem	228
§10.4. Cotangent path-homotopy	231
§10.5. Poisson homotopy and homology groups	237
§10.6. Variation of symplectic area	245
Problems	249
Chapter 11. Contravariant Geometry and Connections	253
§11.1. Contravariant connections on vector bundles	253
§11.2. Parallel transport along cotangent paths	256
§11.3. Flat contravariant connections	260
§11.4. Geodesics for contravariant connections	265
§11.5. Existence of symplectic realizations	269
Problems	273
Notes and References for Part 3	277

Part 4. Symplectic Groupoids

Chapter 12. Complete Symplectic Realizations	283
§12.1. The infinitesimal action	284
§12.2. Case study: Linear Poisson structures	286
§12.3. Case study: The zero Poisson structure	288
§12.4. Case study: Nondegenerate Poisson structures	290
§12.5. Completeness	293
§12.6. The Poisson homotopy groupoid	299
§12.7. Lagrangian fibrations	302
Problems	309
Chapter 13. A Crash Course on Lie Groupoids	313
§13.1. Lie groupoids	313
§13.2. Lie groupoids: Examples and basic constructions	316
§13.3. The Lie algebroid of a Lie groupoid	326
§13.4. Lie algebroids: Examples and basic constructions	330
§13.5. Duals of Lie algebroids	339
§13.6. The Lie philosophy	345
§13.7. The non-Hausdorff setting	348
Problems	357
Chapter 14. Symplectic Groupoids	361
§14.1. Symplectic groupoids and Poisson structures	361
§14.2. Examples	368
§14.3. Integrability of Poisson structures I	377
§14.4. Symplectic groupoid actions	388
§14.5. Hausdorffness issues	393
§14.6. The Poisson homotopy groupoid	395
§14.7. Morita equivalence	405
§14.8. Integrability of Poisson structures II	408
Problems	414
Notes and References for Part 4	419

Part 5. Appendices

Appendix A. Lie Groups	425
§A.1. Lie groups	425
§A.2. Lie group actions	428
§A.3. Time-dependent vector fields	433
Appendix B. Symplectic Structures	437
§B.1. Symplectic forms	437
§B.2. Symplectic and Hamiltonian actions	441
Appendix C. Foliations	447
§C.1. Regular foliations	447
§C.2. Foliated differential forms	452
§C.3. Singular foliations	454
Appendix D. Groupoids: Conventions and Choices	459
Bibliography	463
Index	473
