Preface	xi
Conventions	xviii
Chapter 1. Categories	1
§1.1. Categories and functors	2
§1.2. Sets and classes	10
§1.3. Natural transformations	16
§1.4. Limits	22
§1.5. Adjoint pairs	33
§1.6. Exercises	40
Chapter 2. Abelian Categories	49
§2.1. Additive categories	50
§2.2. Abelian categories	55
§2.3. Sheaves	62
§2.4. Sites	71
§2.5. Standard lemmas	75
§2.6. Projectives and injectives	82
§2.7. Essential extensions	88
§2.8. The Freyd–Mitchell theorem	91
§2.9. Exercises	99
Chapter 3. Derived Functors	105
§3.1. Categories of complexes	106

---

§3.2.	Derived functors	111
§3.3.	Computing derived functors	121
§3.4.	The Ext and Tor functors	126
§3.5.	The $\lim^n$ functors	134
§3.6.	Exercises	139
Chapter 4.	Spectral Sequences	147
§4.1.	Exact couples	148
§4.2.	Filtered complexes	154
§4.3.	Double complexes	157
§4.4.	Simple applications	159
§4.5.	The Grothendieck spectral sequence	162
§4.6.	The Ischebeck spectral sequences	166
§4.7.	Exercises	168
Chapter 5.	Projective and Injective Modules	173
§5.1.	Projective and free modules	174
§5.2.	Projective dimension	183
§5.3.	Injective modules	190
§5.4.	Injective dimension	196
§5.5.	Global dimension of rings	200
§5.6.	Free resolutions	205
§5.7.	Stably free modules	208
§5.8.	The Quillen–Suslin theorem	216
§5.9.	Exercises	220
Chapter 6.	Flatness	225
§6.1.	Flat modules	226
§6.2.	Flat morphisms	232
§6.3.	Faithful flatness	235
§6.4.	Criteria for flatness	239
§6.5.	Flatness and freeness	244
§6.6.	Exercises	248
Chapter 7.	Koszul Complexes and Regular Sequences	251
§7.1.	The Koszul complex	252
§7.2.	Regular sequences	258
§7.3.	Depth	262

---

§7.4. The Auslander–Buchsbaum formula	266
§7.5. Multiplicities revisited	268
§7.6. Macaulay resultants	272
§7.7. Computing the resultant	279
§7.8. Exercises	285
Chapter 8. Regularity	289
§8.1. Regular local rings	290
§8.2. Regularity and global dimension	292
§8.3. Change of rings	295
§8.4. Regularity and factorization	299
§8.5. Normal rings	300
§8.6. Regularity in characteristic $p$	305
§8.7. Exercises	307
Chapter 9. Mild Singularities	311
§9.1. The Cohen–Macaulay property	313
§9.2. Catenary rings	320
§9.3. Miracle flatness	324
§9.4. Irreducible decompositions	325
§9.5. The socle	330
§9.6. Modules of finite injective dimension	331
§9.7. Gorenstein rings	334
§9.8. Complete intersections	340
§9.9. Exercises	346
Chapter 10. Local Cohomology and Duality	351
§10.1. Duality for Artinian rings	353
§10.2. Matlis duality	357
§10.3. Poincaré duality	361
§10.4. Canonical modules	362
§10.5. Local cohomology	366
§10.6. Properties of local cohomology	372
§10.7. Grothendieck local duality	377
§10.8. Exercises	379
Appendix A. Background Material	383
§A.1. Basics	383

§A.2. Finiteness conditions	384
§A.3. Primary decomposition	385
§A.4. Integral extensions	387
§A.5. Dedekind rings	388
§A.6. Topological rings	389
§A.7. Dimension and height	390
§A.8. Local theory of rings	391
§A.9. Algebraic varieties	393
Bibliography	395
Index of Notation	403
Index	407
