Preface	xi
Chapter 1. Introduction to Decision Theory	1
§1.1. Preliminaries	1
§1.2. Ordinal Utility	3
§1.3. Linear Utility	6
Chapter 2. Strategic Games	13
§2.1. Introduction to Strategic Games	13
§2.2. Nash Equilibrium in Strategic Games	18
§2.3. Two-Player Zero-Sum Games	24
§2.4. Mixed Strategies in Finite Games	28
§2.5. Bimatrix Games	31
§2.6. Matrix Games	37
§2.7. Algorithms for Matrix Games	43
§2.8. Matrix Games and Linear Programming	52
§2.9. Refinements of Nash Equilibrium in Finite Games	59
§2.10. A Basic Model of Knowledge	73
§2.11. Correlated Equilibrium	76
§2.12. On the Epistemic Foundations of the Different Solution Concepts for Strategic Games	81

---

§2.13. Fixed-Point Theorems	88
§2.14. Extreme Points and Convex Sets: Krein–Milman Theorem	92
Exercises of Chapter 2	95
Chapter 3. Extensive Games	101
§3.1. Introduction to Extensive Games	101
§3.2. Strategies in Extensive Games: Mixed Strategies vs. Behavior Strategies	106
§3.3. Nash Equilibrium in Extensive Games	112
§3.4. Subgame Perfect Equilibrium	119
§3.5. Sequential Equilibrium	127
§3.6. Further Refinements	134
§3.7. Repeated Games	148
Exercises of Chapter 3	160
Chapter 4. Games with Incomplete Information	165
§4.1. Incomplete Information: Introduction and Modeling	165
§4.2. Bayesian Games and Bayesian Nash Equilibrium	167
§4.3. The Chain Store Paradox in Perspective	173
§4.4. A First Application of Bayesian Games: Auctions	180
§4.5. A Second Application of Bayesian Games: Mechanism Design and the Revelation Principle	188
§4.6. Extensive Games with Incomplete Information: Multistage Games and Perfect Bayesian Equilibrium	192
§4.7. An Outline of Harsanyi’s Approach	199
Exercises of Chapter 4	202
Chapter 5. Fundamentals of Cooperative Games	205
§5.1. Introduction to Cooperative Games	205
§5.2. Nontransferable Utility Games	206
§5.3. Bargaining	208
§5.4. Transferable Utility Games	216
§5.5. The Core and Related Concepts	219
§5.6. The Shapley Value	228

---

§5.7. Computation of the Shapley Value	233
§5.8. The Banzhaf Value	239
§5.9. Equal Division Values	242
§5.10. The Nucleolus	245
§5.11. The Core-Center	249
§5.12. Convex Games	253
§5.13. Games with Communication Graphs: The Myerson Value	256
§5.14. Games with A Priori Unions: The Owen Value	261
§5.15. Noncooperative Models in Cooperative Game Theory: Implementation Theory	265
Exercises of Chapter 5	283
Chapter 6. Applications of Cooperative Games	285
§6.1. Preliminaries	285
§6.2. Airport Problems and Airport Games	286
§6.3. Bankruptcy Problems and Bankruptcy Games	293
§6.4. Voting Problems and Voting Games: Power Indices	303
§6.5. Apportionments and Data Science	315
§6.6. Linear Production Games	320
§6.7. Maximum Flow Games	324
§6.8. Inventory Games	327
§6.9. Project Planning	333
§6.10. Assignment Games	339
§6.11. Cooperation on Minimum Cost Spanning Tree Problems	347
§6.12. Cooperation on Queueing Problems	358
§6.13. Cooperation on Sequencing Problems	363
Exercises of Chapter 6	367
Bibliography	371
Notations	395
Index of Authors	397
Index of Solution Concepts	403
Subject Index	405
