Preface of the Second Edition	xi
Preface of the First Edition	xv
Notation	xix
Introduction	1
§1. Formulation of the optimal transportation problem	1
§2. Basic questions	6
§3. Overview of the course	10
Chapter 1. The Kantorovich Duality	17
§1.1. General duality	17
§1.2. Distance cost functions	34
§1.3. Appendix: A duality argument in $C_b(X \times Y)$	39
§1.4. Appendix: $\{0, 1\}$ -valued costs and Strassen's theorem	44
Chapter 2. Geometry of Optimal Transportation	49
§2.1. A duality-based proof for the quadratic cost	50
§2.2. The real line	75
§2.3. Alternative arguments	80
§2.4. Generalizations to other costs	87
§2.5. More on $c$ -concave functions	105
Chapter 3. Brenier's Polar Factorization Theorem	109
§3.1. Rearrangements and polar factorization	109

---

§3.2. Historical motivations: fluid mechanics	113
§3.3. Proof of Brenier's polar factorization theorem	121
§3.4. Related facts	124
Chapter 4. The Monge-Ampère Equation	127
§4.1. Informal presentation	127
§4.2. Regularity	133
§4.3. Open problems	143
Chapter 5. Displacement Interpolation and Displacement Convexity	145
§5.1. Displacement interpolation	145
§5.2. Displacement convexity	152
§5.3. Application: uniqueness of ground state	166
§5.4. The Eulerian point of view	168
Chapter 6. Geometric and Gaussian Inequalities	187
§6.1. Brunn-Minkowski and Prékopa-Leindler inequalities	188
§6.2. The Alesker-Dar-Milman diffeomorphism	194
§6.3. Gaussian inequalities	197
§6.4. Sobolev inequalities	204
Chapter 7. The Metric Side of Optimal Transportation	209
§7.1. Monge-Kantorovich distances	211
§7.2. Topological properties	216
§7.3. The real line	222
§7.4. Behavior under rescaled convolution	224
§7.5. An application to the Boltzmann equation	227
§7.6. Linearization	237
Chapter 8. A Differential Point of View on Optimal Transportation	241
§8.1. A differential formulation of optimal transportation	242
§8.2. Differential calculus in $(P(\mathbb{R}^n), W_2)$	254
§8.3. Monge-Kantorovich induced dynamics	255
§8.4. Time-discretization	260
§8.5. Differentiability of the quadratic Wasserstein distance	266
§8.6. Non-quadratic costs	270
Chapter 9. Entropy Production and Transportation Inequalities	271
§9.1. More on optimal-transportation induced dissipative equations	272

---

§9.2. Logarithmic Sobolev inequalities	283
§9.3. Talagrand inequalities	295
§9.4. HWI inequalities	301
§9.5. Nonlinear generalizations: internal energy	305
§9.6. Nonlinear generalizations: interaction energy	308
Chapter 10. Problems	311
List of Problems	312
Bibliography	353
Table of Short Statements	369
Index	375
