Preface	ix
The “isomorphism” notion	xiii
Chapter 1. Cones	1
§1.1. Wedges and cones	2
§1.2. Archimedean cones	11
§1.3. Lattice cones	13
§1.4. Positive and order bounded operators	23
§1.5. Positive linear functionals	31
§1.6. Faces and extremal vectors of cones	36
§1.7. Cone bases	39
§1.8. Decomposability in ordered vector spaces	43
§1.9. The Riesz–Kantorovich formulas	54
Chapter 2. Cones in topological vector spaces	61
§2.1. Ordered topological vector spaces	62
§2.2. Wedge duality	70
§2.3. Normal cones	76
§2.4. Positivity and continuity	82
§2.5. Ordered Banach spaces	85
§2.6. Ice cream cones in normed spaces	99
§2.7. Ideals in ordered vector spaces	103
§2.8. The order topology generated by a cone	110

Chapter 3. Yudin and pull-back cones	117
§3.1. Closed cones in finite dimensional vector spaces	118
§3.2. Directional wedges and Yudin cones	122
§3.3. Polyhedral wedges and cones	131
§3.4. The geometrical structure of polyhedral cones	137
§3.5. Linear inequalities and alternatives	148
§3.6. Pull-back cones of operators	152
Chapter 4. Krein operators	159
§4.1. The concept of a Krein operator	160
§4.2. Eigenvalues of Krein operators	163
§4.3. Fixed points and eigenvectors	167
Chapter 5. \mathcal{K} -lattices	173
§5.1. The notion and properties of \mathcal{K} -lattices	174
§5.2. The Riesz–Kantorovich transform	183
§5.3. The order extension of $\mathcal{L}_b(L, N)$	190
Chapter 6. The order extension of L'	197
§6.1. The extension of L'	199
§6.2. Generalized Riesz–Kantorovich functionals	204
§6.3. When is the Riesz–Kantorovich functional additive?	210
Chapter 7. Piecewise affine functions	221
§7.1. One-dimensional piecewise affine functions	221
§7.2. Multivariate piecewise affine functions	227
Chapter 8. Appendix: linear topologies	243
§8.1. Linear topologies on vector spaces	244
§8.2. Duality theory	247
§8.3. \mathfrak{S} -topologies	249
§8.4. The separation of convex sets	251
§8.5. Normed and Banach spaces	252
§8.6. Finite dimensional topological vector spaces	256
§8.7. The open mapping and the closed graph theorems	257
§8.8. The bounded weak* topology	259
Bibliography	265
Index	271
