Preface	xi
Chapter 1. A Brief Classical Introduction	1
§1.1. Quadratic Forms as Polynomials	1
§1.2. Representation and Equivalence; Matrix Connections; Discriminants	4
Exercises	7
§1.3. A Brief Historical Sketch, and Some References to the Literature	7
Chapter 2. Quadratic Spaces and Lattices	13
§2.1. Fundamental Definitions	13
§2.2. Orthogonal Splitting; Examples of Isometry and Non-isometry	16
Exercises	20
§2.3. Representation, Splitting, and Isotropy; Invariants $u(F)$ and $s(F)$	21
§2.4. The Orthogonal Group of a Space	26
§2.5. Witt's Cancellation Theorem and Its Consequences	29
§2.6. Witt's Chain Equivalence Theorem	34
§2.7. Tensor Products of Quadratic Spaces; the Witt ring of a field	35
Exercises	39
§2.8. Quadratic Spaces over Finite Fields	40
§2.9. Hermitian Spaces	44
Exercises	49

---

Chapter 3. Valuations, Local Fields, and $p$ -adic Numbers	51
§3.1. Introduction to Valuations	51
§3.2. Equivalence of Valuations; Prime Spots on a Field	54
Exercises	58
§3.3. Completions, $\mathbb{Q}_p$ , Residue Class Fields	59
§3.4. Discrete Valuations	63
§3.5. The Canonical Power Series Representation	64
§3.6. Hensel's Lemma, the Local Square Theorem, and Local Fields	69
§3.7. The Legendre Symbol; Recognizing Squares in $\mathbb{Q}_p$	74
Exercises	76
Chapter 4. Quadratic Spaces over $\mathbb{Q}_p$	81
§4.1. The Hilbert Symbol	81
§4.2. The Hasse Symbol (and an Alternative)	86
§4.3. Classification of Quadratic $\mathbb{Q}_p$ -Spaces	87
§4.4. Hermitian Spaces over Quadratic Extensions of $\mathbb{Q}_p$	92
Exercises	94
Chapter 5. Quadratic Spaces over $\mathbb{Q}$	97
§5.1. The Product Formula and Hilbert's Reciprocity Law	97
§5.2. Extension of the Scalar Field	98
§5.3. Local to Global: The Hasse–Minkowski Theorem	99
§5.4. The Bruck–Ryser Theorem on Finite Projective Planes	105
§5.5. Sums of Integer Squares (First Version)	109
Exercises	111
Chapter 6. Lattices over Principal Ideal Domains	113
§6.1. Lattice Basics	114
§6.2. Valuations and Fractional Ideals	116
§6.3. Invariant factors	118
§6.4. Lattices on Quadratic Spaces	122
§6.5. Orthogonal Splitting and Triple Diagonalization	124
§6.6. The Dual of a Lattice	128
Exercises	130
§6.7. Modular Lattices	133
§6.8. Maximal Lattices	136
§6.9. Unimodular Lattices and Pythagorean Triples	138

---

§6.10. Remarks on Lattices over More General Rings	141
Exercises	142
Chapter 7. Initial Integral Results	145
§7.1. The Minimum of a Lattice; Definite Binary $\mathbb{Z}$ -Lattices	146
§7.2. Hermite's Bound on $\min L$ , with a Supplement for $k[x]$ -Lattices	149
§7.3. Djoković's Reduction of $k[x]$ -Lattices; Harder's Theorem	153
§7.4. Finiteness of Class Numbers (The Anisotropic Case)	156
Exercises	158
Chapter 8. Local Classification of Lattices	161
§8.1. Jordan Splittings	161
§8.2. Nondyadic Classification	164
§8.3. Towards 2-adic Classification	165
Exercises	171
Chapter 9. The Local-Global Approach to Lattices	175
§9.1. Localization	176
§9.2. The Genus	178
§9.3. Maximal Lattices and the Cassels–Pfister Theorem	181
§9.4. Sums of Integer Squares (Second Version)	184
Exercises	187
§9.5. Indefinite Unimodular $\mathbb{Z}$ -Lattices	188
§9.6. The Eichler–Kneser Theorem; the Lattice $\mathbb{Z}^n$	191
§9.7. Growth of Class Numbers with Rank	196
§9.8. Introduction to Neighbor Lattices	201
Exercises	205
Chapter 10. Lattices over $\mathbb{F}_q[x]$	207
§10.1. An Initial Example	209
§10.2. Classification of Definite $\mathbb{F}_q[x]$ -Lattices	210
§10.3. On the Hasse–Minkowski Theorem over $\mathbb{F}_q(x)$	218
§10.4. Representation by $\mathbb{F}_q[x]$ -Lattices	220
Exercises	223
Chapter 11. Applications to Cryptography	225
§11.1. A Brief Sketch of the Cryptographic Setting	225
§11.2. Lattices in $\mathbb{R}^n$	227

§11.3. LLL-Reduction	230
§11.4. Lattice Attacks on Knapsack Cryptosystems	235
§11.5. Remarks on Lattice-Based Cryptosystems	239
Appendix: Further Reading	241
Bibliography	245
