Preface	xv
Chapter 0. Review of Semisimple Lie Algebras	1
§0.1. Cartan Decomposition	1
§0.2. Root Systems	3
§0.3. Weyl Groups	4
§0.4. Chevalley–Bruhat Ordering of W	5
§0.5. Universal Enveloping Algebras	6
§0.6. Integral Weights	7
§0.7. Representations	8
§0.8. Finite Dimensional Modules	9
§0.9. Simple Modules for $\mathfrak{sl}(2, \mathbb{C})$	9
Part I. Highest Weight Modules	
Chapter 1. Category \mathcal{O} : Basics	13
§1.1. Axioms and Consequences	13
§1.2. Highest Weight Modules	15
§1.3. Verma Modules and Simple Modules	17
§1.4. Maximal Vectors in Verma Modules	18
§1.5. Example: $\mathfrak{sl}(2, \mathbb{C})$	20
§1.6. Finite Dimensional Modules	20
§1.7. Action of the Center	22
§1.8. Central Characters and Linked Weights	24

§1.9. Harish-Chandra Homomorphism	25
§1.10. Harish-Chandra's Theorem	26
§1.11. Category \mathcal{O} is Artinian	28
§1.12. Subcategories \mathcal{O}_χ	30
§1.13. Blocks	30
§1.14. Formal Characters of Finite Dimensional Modules	32
§1.15. Formal Characters of Modules in \mathcal{O}	33
§1.16. Formal Characters of Verma Modules	34
Notes	35
Chapter 2. Characters of Finite Dimensional Modules	37
§2.1. Summary of Prerequisites	37
§2.2. Formal Characters Revisited	38
§2.3. The Functions p and q	38
§2.4. Formulas of Weyl and Kostant	40
§2.5. Dimension Formula	42
§2.6. Maximal Submodule of $M(\lambda)$, $\lambda \in \Lambda^+$	43
§2.7. Related Topics	45
Notes	46
Chapter 3. Category \mathcal{O} : Methods	47
§3.1. Hom and Ext	47
§3.2. Duality in \mathcal{O}	49
§3.3. Duals of Highest Weight Modules	51
§3.4. The Reflection Group $W_{[\lambda]}$	52
§3.5. Dominant and Antidominant Weights	54
§3.6. Tensoring Verma Modules with Finite Dimensional Modules	56
§3.7. Standard Filtrations	58
§3.8. Projectives in \mathcal{O}	60
§3.9. Indecomposable Projectives	62
§3.10. Standard Filtrations of Projectives	64
§3.11. BGG Reciprocity	65
§3.12. Example: $\mathfrak{sl}(2, \mathbb{C})$	66
§3.13. Projective Generators and Finite Dimensional Algebras	68
§3.14. Contravariant Forms	68
§3.15. Universal Construction	70

Notes	71
Chapter 4. Highest Weight Modules I	73
§4.1. Simple Submodules of Verma Modules	74
§4.2. Homomorphisms between Verma Modules	75
§4.3. Special Case: Dominant Integral Weights	76
§4.4. Simplicity Criterion: Integral Case	77
§4.5. Existence of Embeddings: Preliminaries	78
§4.6. Existence of Embeddings: Integral Case	79
§4.7. Existence of Embeddings: General Case	81
§4.8. Simplicity Criterion: General Case	82
§4.9. Blocks of \mathcal{O} Revisited	83
§4.10. Example: Antidominant Projectives	84
§4.11. Application to $\mathfrak{sl}(3, \mathbb{C})$	85
§4.12. Shapovalov Elements	86
§4.13. Proof of Shapovalov's Theorem	88
§4.14. A Look Back at Verma's Thesis	90
Notes	91
Chapter 5. Highest Weight Modules II	93
§5.1. BGG Theorem	93
§5.2. Bruhat Ordering	94
§5.3. Jantzen Filtration	95
§5.4. Example: $\mathfrak{sl}(3, \mathbb{C})$	97
§5.5. Application to BGG Theorem	98
§5.6. Key Lemma	98
§5.7. Proof of Jantzen's Theorem	100
§5.8. Determinant Formula	102
§5.9. Details of Shapovalov's Proof	103
Notes	106
Chapter 6. Extensions and Resolutions	107
§6.1. BGG Resolution of a Finite Dimensional Module	108
§6.2. Weak BGG Resolution	109
§6.3. Exactness of the Sequence	110
§6.4. Weights of the Exterior Powers	111
§6.5. Extensions of Verma Modules	113

§6.6. Application: Bott's Theorem	115
§6.7. Squares	116
§6.8. Maps in a BGG Resolution	118
§6.9. Homological Dimension	120
§6.10. Higher Ext Groups	122
§6.11. Vanishing Criteria for Ext^n	123
§6.12. Computation of $\text{Ext}_{\mathcal{O}}^n(M(\mu), M(\lambda)^\vee)$	124
§6.13. Ext Criterion for Standard Filtrations	125
§6.14. Characters in Terms of $\text{Ext}_{\mathcal{O}}^\bullet$	126
§6.15. Comparison of $\text{Ext}_{\mathcal{O}}^\bullet$ and Lie Algebra Cohomology	127
Notes	128
Chapter 7. Translation Functors	129
§7.1. Translation Functors	130
§7.2. Adjoint Functor Property	131
§7.3. Weyl Group Geometry	132
§7.4. Nonintegral Weights	134
§7.5. Key Lemma	135
§7.6. Translation Functors and Verma Modules	137
§7.7. Translation Functors and Simple Modules	138
§7.8. Application: Category Equivalences	138
§7.9. Translation to Upper Closures	140
§7.10. Character Formulas	142
§7.11. Translation Functors and Projective Modules	143
§7.12. Translation from a Facet Closure	144
§7.13. Example	145
§7.14. Translation from a Wall	146
§7.15. Wall-Crossing Functors	148
§7.16. Self-Dual Projectives	149
Notes	152
Chapter 8. Kazhdan–Lusztig Theory	153
§8.1. The Multiplicity Problem for Verma Modules	154
§8.2. Hecke Algebras and Kazhdan–Lusztig Polynomials	156
§8.3. Examples	157
§8.4. Kazhdan–Lusztig Conjecture	159

§8.5. Schubert Varieties and KL Polynomials	160
§8.6. Example: W of Type C_3	161
§8.7. Jantzen's Multiplicity One Criterion	162
§8.8. Proof of the KL Conjecture	165
§8.9. Outline of the Proof	166
§8.10. Ext Functors and Vogan's Conjecture	168
§8.11. KLV Polynomials	169
§8.12. The Jantzen Conjecture and the KL Conjecture	171
§8.13. Weight Filtrations and Jantzen Filtrations	172
§8.14. Review of Loewy Filtrations	173
§8.15. Loewy Filtrations and KL Polynomials	174
§8.16. Some Details	177
 Part II. Further Developments	
Chapter 9. Parabolic Versions of Category \mathcal{O}	181
§9.1. Standard Parabolic Subalgebras	182
§9.2. Modules for Levi Subalgebras	183
§9.3. The Category $\mathcal{O}^{\mathfrak{p}}$	184
§9.4. Parabolic Verma Modules	186
§9.5. Example: $\mathfrak{sl}(3, \mathbb{C})$	188
§9.6. Formal Characters and Composition Factors	189
§9.7. Relative Kazhdan–Lusztig Theory	190
§9.8. Projectives and BGG Reciprocity in $\mathcal{O}^{\mathfrak{p}}$	191
§9.9. Structure of Parabolic Verma Modules	192
§9.10. Maps between Parabolic Verma Modules	193
§9.11. Parabolic Verma Modules of Scalar Type	195
§9.12. Simplicity of Parabolic Verma Modules	196
§9.13. Jantzen's Simplicity Criterion	198
§9.14. Socles and Self-Dual Projectives	199
§9.15. Blocks of $\mathcal{O}^{\mathfrak{p}}$	200
§9.16. Analogue of the BGG Resolution	201
§9.17. Filtrations and Rigidity	203
§9.18. Special Case: Maximal Parabolic Subalgebras	204
Notes	206
Chapter 10. Projective Functors and Principal Series	207

§10.1. Functors on Category \mathcal{O}	208
§10.2. Tensoring With a Dominant Verma Module	210
§10.3. Proof of the Theorem	211
§10.4. Module Categories	212
§10.5. Projective Functors	213
§10.6. Annihilator of a Verma Module	215
§10.7. Comparison of Hom Spaces	216
§10.8. Classification Theorem	218
§10.9. Harish-Chandra Modules	219
§10.10. Principal Series Modules and Category \mathcal{O}	221
Notes	222
Chapter 11. Tilting Modules	223
§11.1. Tilting Modules	224
§11.2. Indecomposable Tilting Modules	225
§11.3. Translation Functors and Tilting Modules	227
§11.4. Grothendieck Groups	229
§11.5. Subgroups of \mathcal{K}	230
§11.6. Fusion Rules	231
§11.7. Formal Characters	232
§11.8. The Parabolic Case	234
Chapter 12. Twisting and Completion Functors	235
§12.1. Shuffling Functors	236
§12.2. Shuffled Verma Modules	237
§12.3. Families of Twisted Verma Modules	239
§12.4. Uniqueness of a Family of Twisted Verma Modules	240
§12.5. Existence of Twisted Verma Modules	242
§12.6. Twisting Functors	242
§12.7. Arkhipov's Construction of Twisting Functors	243
§12.8. Twisted Versions of Standard Filtrations	244
§12.9. Complete Modules	245
§12.10. Enright's Completions	247
§12.11. Completion Functors	248
§12.12. Comparison of Functors	249
Chapter 13. Complements	251

§13.1. Primitive Ideals in $U(\mathfrak{g})$	252
§13.2. Classification of Primitive Ideals	253
§13.3. Structure of a Fiber	254
§13.4. Kostant's Problem	255
§13.5. Kac–Moody Algebras	256
§13.6. Category \mathcal{O} for Kac–Moody Algebras	258
§13.7. Highest Weight Categories	259
§13.8. Blocks and Finite Dimensional Algebras	260
§13.9. Quiver Attached to a Block	261
§13.10. Representation Type of a Block	263
§13.11. Soergel's Functor \mathbb{V}	264
§13.12. Coinvariant Algebra of W	265
§13.13. Application: Category Equivalence	266
§13.14. Endomorphisms and Socles of Projectives	267
§13.15. Koszul Duality	268
Bibliography	271
Frequently Used Symbols	283
Index	287
