Preface	v
Chapter 1. Matrix Games	1
1.1. Zero-Sum Matrix Games	1
1.2. Bimatrix Games	8
1.3. Completely Mixed Matrix Games	12
1.4. Completely Mixed Bimatrix Games	19
1.5. Symmetric Equilibrium	21
1.6. Shapley-Snow Theorem	23
1.7. Some Game Classes	25
1.7.1. Games without Value	25
1.7.2. Game on the Unit Square	27
1.7.3. Continuous Games	31
1.7.4. Games of Timing	33
1.7.5. Square Root Game	34
1.8. Algorithmic Aspects of Matrix Games	36
1.9. Statistical Decision Theory and Game Theory	37
1.10. Numerical Geometry and Game Theory	38
1.11. Summary	41
Chapter 2. Finite Stochastic Games	43
2.1. Symmetric Optimal (Equilibrium) in Stochastic Games	49
2.2. Completely Mixed Stochastic Games	52
2.3. Orderfield Property for Stochastic Games	52
2.4. Single Player Control Stochastic Games	54
2.5. Switching Control Stochastic Games	60
2.6. Perfect Information Stochastic Games	63
2.7. Separable Reward - State Independent Transition (SER-SIT) Stochastic Games	64
2.8. Additive Reward - Additive Transition (ARAT) Stochastic Games	68
2.9. Mixture Class of Stochastic Games	71
2.9.1. Orderfield Property for Mixture Classes of Stochastic Games	71

2.9.2. Stationary Equilibrium Property for Mixture Classes of Stochastic Games	75
2.10. Algorithmic Aspects of Finite Stochastic Games	79
2.11. Summary	80
Chapter 3. Infinite Stochastic Games	81
3.1. Auxiliary Game	81
3.2. Optimal Stationary Strategies for Infinite Stochastic Games	82
3.3. Summary	85
Chapter 4. Undiscounted Stochastic Games	87
4.1. $p$ -equilibrium	91
4.2. Reformulation of Riesz Representation Theorem	93
4.3. Orderfield Property for Undiscounted Stochastic Games	94
4.4. Summary	97
Chapter 5. $N$ -Player Cooperative Games	99
5.1. Coalitions and Stability	99
5.2. Product of Two Simple Games	107
5.2.1. Monotonicity Property	108
5.3. Core of Cooperative Games	111
5.3.1. Necessary and Sufficient Conditions for Existence of Core	113
5.3.2. Market Games and Core	113
5.3.3. Core as a Solution	114
5.3.4. Core and the Bankruptcy Problem	116
5.4. Balanced Collection	117
5.5. Assignment Games	118
5.6. Symmetric Cooperative Games	121
5.7. $0 - 1$ Normalization	122
5.8. Large Stable Set	122
5.9. Cooperative Games and Decision Theory	125
5.10. Summary	127
Appendix A. Minmax Theorem	129
Appendix B. Some Analytic Concepts	133
B.1. Convergence	133
B.2. Selection Theorems	135
Bibliography	139
Index	145
