

# Contents

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Differential calculus on normed linear spaces</b> | <b>1</b>  |
| 1.1      | The Fréchet derivative . . . . .                     | 1         |
| 1.2      | Higher order derivatives . . . . .                   | 15        |
| 1.3      | Some important theorems . . . . .                    | 20        |
| 1.4      | Extrema of real-valued functions . . . . .           | 27        |
| <b>2</b> | <b>The Brouwer degree</b>                            | <b>33</b> |
| 2.1      | Definition of the degree . . . . .                   | 33        |
| 2.2      | Properties of the degree . . . . .                   | 41        |
| 2.3      | Brouwer's theorem and applications . . . . .         | 46        |
| 2.4      | Monotone mappings on Hilbert spaces . . . . .        | 49        |
| 2.5      | Borsuk's theorem . . . . .                           | 57        |
| 2.6      | The genus . . . . .                                  | 63        |
| <b>3</b> | <b>The Leray-Schauder degree</b>                     | <b>68</b> |
| 3.1      | Preliminaries . . . . .                              | 68        |
| 3.2      | Definition of the degree . . . . .                   | 71        |
| 3.3      | Properties of the degree . . . . .                   | 73        |
| 3.4      | Fixed point theorems . . . . .                       | 76        |
| 3.5      | The index . . . . .                                  | 82        |
| 3.6      | An application to differential equations . . . . .   | 87        |
| <b>4</b> | <b>Bifurcation theory</b>                            | <b>91</b> |
| 4.1      | Introduction . . . . .                               | 91        |
| 4.2      | The Lyapunov-Schmidt method . . . . .                | 95        |
| 4.3      | Morse's lemma . . . . .                              | 97        |
| 4.4      | A perturbation method . . . . .                      | 104       |
| 4.5      | Krasnoselsk'ii's theorem . . . . .                   | 107       |
| 4.6      | Rabinowitz' theorem . . . . .                        | 109       |
| 4.7      | A variational method . . . . .                       | 112       |

|          |  |            |
|----------|--|------------|
| <b>5</b> | <b>Critical points of functionals</b>      | <b>120</b> |
| 5.1      | Minimization of functionals . . . . .      | 120        |
| 5.2      | Saddle points . . . . .                    | 126        |
| 5.3      | The Palais-Smale condition . . . . .       | 130        |
| 5.4      | The deformation lemma . . . . .            | 136        |
| 5.5      | The mountain pass theorem . . . . .        | 142        |
| 5.6      | Multiplicity of critical points . . . . .  | 146        |
| 5.7      | Critical points with constraints . . . . . | 150        |
|          | <b>Bibliography</b>                        | <b>159</b> |
|          | <b>Index</b>                               | <b>163</b> |
