

Contents

1	Background	1
1.1	Axioms of set theory	1
1.2	Constructing numbers from sets	6
1.3	Set theoretic construction of the real numbers	10
1.4	Sequences of real numbers	18
1.5	Infinite series	23
1.6	Sequences of functions	29
1.7	Power series	35
1.8	Metric spaces and Euclidean spaces	40
1.9	The Heine-Borel theorem	48
1.10	Vector-valued functions	50
1.11	Derivatives of multivariable functions	52
1.12	The inverse function theorem	62
1.13	The implicit function theorem	67
1.14	The Lagrange multiplier method	71
1.15	Level sets and tangent spaces	73
1.16	Changing variables in integrals	75
1.17	Volume and surface area of the hypersphere	80
1.18	Green's theorem	82
1.19	Theorems of Gauss and Stokes	87
1.20	Differential forms	91
2	Measure theory	101
2.1	Topological spaces and measure spaces	101
2.2	The Lebesgue integral	104
2.3	Inner product spaces	110
2.4	Orthonormal sets	116
2.5	Trigonometric series	121
2.6	Banach spaces	125
2.7	Baire's theorem	131
2.8	Hahn-Banach theorem	133

2.9	Examples of dual spaces	137
3	Fourier Transforms	143
3.1	Fubini's theorem and convolutions	143
3.2	The Fourier Transform	146
3.3	Differentiation under the integral sign	150
3.4	Further examples of Fourier transforms	154
3.5	A convolution theorem	156
3.6	The inversion theorem	157
3.7	Further properties of the Fourier transform	162
3.8	The Plancherel theorem	163
3.9	The Uncertainty Principle	166
3.10	Trigonometric polynomials	170
3.11	The isoperimetric inequality	173
3.12	Weyl's criterion and uniform distribution	176
3.13	Fourier series	179
3.14	The Poisson summation formula	182
3.15	A Fourier analytic proof of the central limit theorem	189
4	Complex Analysis	193
4.1	Basic definitions	193
4.2	Integration over paths	200
4.3	The local Cauchy theorem	203
4.4	Zeros and singularities	209
4.5	The maximum modulus principle	214
4.6	The Global Cauchy Theorem	221
4.7	The Calculus of Residues	224
4.8	Further examples	229
4.9	Rouché's Theorem	236
4.10	Infinite Products and Weierstrass Factorization	240
4.11	The logarithm	247
4.12	The Phragmén-Lindelöf Theorem and Jensen's Theorem	252
4.13	Entire Functions of Order 1	257
4.14	The Gamma Function	260
4.15	Stirling's formula	264
4.16	The Wiener-Ikehara Tauberian theorem	269
4.17	The analytic theorem	271
4.18	The proof of the Tauberian theorem	274
4.19	The prime number theorem	277
4.20	Further applications	280
4.21	The Paley-Wiener theorems	282

5	Introduction to Algebraic Topology	289
5.1	A very brief historical introduction	289
5.2	Homotopic paths	291
5.3	The Fundamental Group	296
5.4	Examples of some fundamental groups.	297
5.5	Covering spaces	302
5.6	Applications	307
5.7	Group actions and orbit spaces.....	312
5.8	Automorphisms of covering spaces	317
5.9	The universal covering space	322
5.10	Suggestions for further reading	326
	References	329
	Index	331
