<b>Preface to the first edition</b>	<b>xi</b>
<b>Preface to subsequent editions</b>	<b>xvii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 What is analysis? . . . . .	1
1.2 Why do analysis? . . . . .	2
<b>2 Starting at the beginning: the natural numbers</b>	<b>12</b>
2.1 The Peano axioms . . . . .	14
2.2 Addition . . . . .	23
2.3 Multiplication . . . . .	29
<b>3 Set theory</b>	<b>32</b>
3.1 Fundamentals . . . . .	32
3.2 Russell's paradox (Optional) . . . . .	45
3.3 Functions . . . . .	48
3.4 Images and inverse images . . . . .	57
3.5 Cartesian products . . . . .	63
3.6 Cardinality of sets . . . . .	69
<b>4 Integers and rationals</b>	<b>76</b>
4.1 The integers . . . . .	76
4.2 The rationals . . . . .	83
4.3 Absolute value and exponentiation . . . . .	88
4.4 Gaps in the rational numbers . . . . .	92
<b>5 The real numbers</b>	<b>96</b>
5.1 Cauchy sequences . . . . .	98
5.2 Equivalent Cauchy sequences . . . . .	102
5.3 The construction of the real numbers . . . . .	105

5.4	Ordering the reals . . . . .	113
5.5	The least upper bound property . . . . .	119
5.6	Real exponentiation, part I . . . . .	124
<b>6</b>	<b>Limits of sequences</b>	<b>129</b>
6.1	Convergence and limit laws . . . . .	129
6.2	The Extended real number system . . . . .	136
6.3	Suprema and infima of sequences . . . . .	140
6.4	Limsup, Liminf, and limit points . . . . .	142
6.5	Some standard limits . . . . .	151
6.6	Subsequences . . . . .	152
6.7	Real exponentiation, part II . . . . .	155
<b>7</b>	<b>Series</b>	<b>159</b>
7.1	Finite series . . . . .	159
7.2	Infinite series . . . . .	169
7.3	Sums of non-negative numbers . . . . .	174
7.4	Rearrangement of series . . . . .	178
7.5	The root and ratio tests . . . . .	182
<b>8</b>	<b>Infinite sets</b>	<b>185</b>
8.1	Countability . . . . .	185
8.2	Summation on infinite sets . . . . .	192
8.3	Uncountable sets . . . . .	199
8.4	The axiom of choice . . . . .	202
8.5	Ordered sets . . . . .	206
<b>9</b>	<b>Continuous functions on <math>\mathbf{R}</math></b>	<b>215</b>
9.1	Subsets of the real line . . . . .	215
9.2	The algebra of real-valued functions . . . . .	222
9.3	Limiting values of functions . . . . .	224
9.4	Continuous functions . . . . .	231
9.5	Left and right limits . . . . .	235
9.6	The maximum principle . . . . .	238
9.7	The intermediate value theorem . . . . .	242
9.8	Monotonic functions . . . . .	245
9.9	Uniform continuity . . . . .	247
9.10	Limits at infinity . . . . .	253

<b>10 Differentiation of functions</b>	<b>255</b>
10.1 Basic definitions . . . . .	255
10.2 Local maxima, local minima, and derivatives . . . . .	261
10.3 Monotone functions and derivatives . . . . .	264
10.4 Inverse functions and derivatives . . . . .	265
10.5 L'Hôpital's rule . . . . .	268
<b>11 The Riemann integral</b>	<b>270</b>
11.1 Partitions . . . . .	271
11.2 Piecewise constant functions . . . . .	275
11.3 Upper and lower Riemann integrals . . . . .	279
11.4 Basic properties of the Riemann integral . . . . .	283
11.5 Riemann integrability of continuous functions . . . . .	288
11.6 Riemann integrability of monotone functions . . . . .	291
11.7 A non-Riemann integrable function . . . . .	293
11.8 The Riemann–Stieltjes integral . . . . .	295
11.9 The two fundamental theorems of calculus . . . . .	298
11.10 Consequences of the fundamental theorems . . . . .	303
<b>A Appendix: the basics of mathematical logic</b>	<b>308</b>
A.1 Mathematical statements . . . . .	309
A.2 Implication . . . . .	315
A.3 The structure of proofs . . . . .	320
A.4 Variables and quantifiers . . . . .	323
A.5 Nested quantifiers . . . . .	327
A.6 Some examples of proofs and quantifiers . . . . .	330
A.7 Equality . . . . .	332
<b>B Appendix: the decimal system</b>	<b>335</b>
B.1 The decimal representation of natural numbers . . . . .	336
B.2 The decimal representation of real numbers . . . . .	339
<b>Index</b>	<b>343</b>
