The Authors	xi
Translator's Note	xiii
Introduction	1
Chapter 1. Poincaré and His Disk	
ÉTIENNE GHYS	17
1.1. An imaginary world	17
1.2. Some formulas	18
1.3. The Poincaré disk is ubiquitous	21
1.4. Lots and lots of models	22
1.5. Attempts to visualize in space	25
1.6. A little bit of triangle geometry	29
1.7. The disk is a tree	32
1.8. Some examples of dendrologic intuition	35
1.9. The disk is a curve	38
1.10. Arrival at the boundary	40
1.11. A few regrets...	42
Appendix: Sketch of a proof of the characterization theorem	42
Bibliography	43
Chapter 2. Differential Equations with Algebraic Coefficients over Arithmetic Manifolds	
NICOLAS BERGERON	47
2.1. Introduction	47
2.2. Algebraic linear differential equations	53
2.3. The step of an omnibus at Coutances	59
2.4. Quadratic forms and arithmetic surfaces	63
2.5. The question of uniformization	69
Bibliography	71
Chapter 3. Poincaré and Analytic Number Theory	
EMMANUEL KOWALSKI	73
3.1. Introduction	73
3.2. Poincaré series and Kloosterman sums	74
3.3. Prime numbers, arithmetic progressions, and a message	82
Bibliography	85
Chapter 4. The Theory of Limit Cycles	
JEAN-PIERRE FRANÇOISE	87

4.1. Introduction	87
4.2. Periodic orbits	87
4.3. Limit cycles. Poincaré–Bendixson theorem	90
4.4. The local Hilbert’s 16th problem, Bautin’s theory	91
4.5. The Poincaré center–focus problem	93
4.6. Abel’s equations and Hilbert’s 16th problem in dimension 1	95
4.7. Complex Poincaré map	95
Bibliography	96
Chapter 5. Singular Points of Differential Equations: On a Theorem of Poincaré	
DOMINIQUE CERVEAU	99
Introduction	99
5.1. The Poincaré–Lyapunov center theorem	101
5.2. A few pictures with commentary	103
5.3. Towards a proof of the center theorem	106
5.4. Examples of centers and connections with “integrability”	109
5.5. The “hyperbolic” Poincaré–Lyapunov theorem	111
Bibliography	112
Chapter 6. Periodic Orbits of the Three-Body Problem: Early History, Contributions of Hill and Poincaré, and Some Recent Developments	
MICHAEL NAUENBERG	113
Introduction	113
6.1. Newton’s periodic lunar orbit	115
6.2. Hill’s periodic lunar orbits and Poincaré’s loops	121
6.3. Poincaré’s treatment of periodic orbits of the three-body problem	126
6.4. Poincaré’s geometrical proofs for the existence of periodic orbits	131
6.5. Some recent developments in periodic orbit theory	135
Bibliography	140
Chapter 7. On the Existence of Closed Geodesics	
NALINI ANANTHARAMAN	143
7.1. Introduction	143
7.2. <i>Sur les lignes géodésiques des surfaces convexes</i> (Poincaré, 1905)	144
7.3. The work of George D. Birkhoff	151
7.4. Using Morse theory	155
7.5. Return to the case of the sphere S^2 : The work of Franks, Bangert, Hingston	157
Bibliography	159
Chapter 8. Poincaré’s Memoir for the Prize of King Oscar II: Celestial Harmony Entangled in Homoclinic Intersections	
FRANÇOIS BÉGUIN	161
8.1. Is the solar system stable?	161
8.2. Poincaré’s memoir for the Prize of King Oscar II	165
8.3. The discovery of homoclinic intersections	175
8.4. “A kind of lattice, tissue, or web of infinitely tight stitches”	178
8.5. Have we untangled the web of homoclinic intersections?	183

8.6. Conclusion	188
Bibliography	190
Chapter 9. Variations on Poincaré's Recurrence Theorem	
ÉTIENNE GHYS	193
9.1. Introduction	193
9.2. Poincaré's recurrence theorem	194
9.3. The example of <i>Scientific American</i> and <i>Science & Vie</i>	195
9.4. Why is the example surprising?	196
9.5. Why the example is very special	198
9.6. A question	202
9.7. Mixing	203
Bibliography	206
Chapter 10. Low-Dimensional Chaos and Asymptotic Time Behavior in the Mechanics of Fluids	
GUIDO BOFFETTA, GUGLIELMO LACORATA, AND ANGELO VULPIANI	207
10.1. Introduction	207
10.2. Lagrangian chaos	207
10.3. Eulerian properties and Lagrangian chaos	210
10.4. Asymptotic time behavior: Transport and diffusion	217
10.5. Conclusions	221
Bibliography	222
Chapter 11. The Concept of "Residue" after Poincaré: Cutting across All of Mathematics	
ALAIN YGER	225
11.1. Introduction	225
11.2. The Poincaré residue from the cohomological angle	231
11.3. The Poincaré residue revisited in the light of the theory of currents	233
11.4. Logarithmic differential forms; connections with logarithmic poles	236
11.5. Poincaré duality and global residues	237
11.6. Residues and duality: Conclusion	239
Bibliography	240
Chapter 12. The Proof of the Poincaré Conjecture, according to Perelman	
LAURENT BESSIÈRES, GÉRARD BESSON, AND MICHEL BOILEAU	243
12.1. Introduction	243
12.2. The flow associated to Ricci curvature	245
12.3. The work of R. Hamilton	247
12.4. G. Perelman's flow with surgery	249
12.5. The Poincaré conjecture	253
Bibliography	254
Chapter 13. Henri Poincaré and the Partial Differential Equations of Mathematical Physics	
JEAN MAWHIN	257

13.1.	Introduction	257
13.2.	The equations of mathematical physics	257
13.3.	The Dirichlet problem and the sweeping method	259
13.4.	Eigenvalues and eigenfunctions of the Fourier problem: A heuristic approach	262
13.5.	The Poincaré inequality	265
13.6.	Eigenvalues and eigenfunctions of the Dirichlet problem: A rigorous approach	268
13.7.	The Neumann method for the Dirichlet problem on an arbitrary domain	273
13.8.	The heat equation and the telegraph equation	275
	Bibliography	276
Chapter 14. Poincaré's <i>Calculus of Probabilities</i>		
	PIERRE CARTIER	279
14.1.	The book's composition	279
14.2.	A physicist's work	279
14.3.	Mathematical methods of probability	281
14.4.	Refutation of the classical theses on chance	282
14.5.	First characteristic of chance	282
14.6.	Second characteristic of chance	283
14.7.	The mechanism of chance	284
14.8.	Definition of probabilities	284
14.9.	The case of continuous probabilities	285
14.10.	Poincaré's response	286
14.11.	Description of a probabilistic model according to Poincaré	287
14.12.	Gauss's law of error	288
14.13.	A jewel of group theory	289
14.14.	Conclusion	290
	Bibliography	291
Chapter 15. Poincaré and Geometric Probability		
	MICHEL MENDES FRANCE	293
15.1.	Introduction	293
15.2.	Buffon and his needle	293
15.3.	Poincaré's theorem in the plane	297
15.4.	The Edelman–Kostlan theorem	298
15.5.	The real zeroes of a random real polynomial	299
15.6.	Three remarks	300
15.7.	Curves and entropy	301
15.8.	Confusion	302
	Bibliography	304
Chapter 16. Poincaré, and Lie's Third Theorem		
	PIERRE-PAUL GRIVEL	307
16.1.	Introduction	307
16.2.	Lie's three fundamental theorems	310
16.3.	The exponential formula at the end of the 19th century	313
16.4.	The universal enveloping algebra according to Poincaré	317

16.5. Poincaré's proof of Lie's third theorem	320
16.6. Poincaré's inheritors	324
16.7. From Lie to Leibniz	325
Bibliography	327
Chapter 17. The Poincaré Group	
MICHEL LE BELLAC	329
17.1. Introduction	329
17.2. Genesis of the Poincaré group (1895/1905)	330
17.3. The 1905 articles and the Lorentz group	332
17.4. A deduction from the Lorentz group	335
17.5. The Poincaré group in quantum physics: Wigner's analysis (1939)	339
17.6. The theorems of Coleman and Mandula (1967) and of Haag, Łopuszański, and Sohnius (1975)	343
17.7. Galilean electromagnetism	345
17.8. Conclusion	348
Bibliography	349
Chapter 18. Henri Poincaré as an Applied Mathematician	
YVES POMEAU	351
18.1. Introduction: The physical problem and its history	351
18.2. Poincaré's calculation: The solution in the form of a series and its estimation in the short wave limit	354
18.3. Fock's analysis	361
18.4. Dispersion of solitons in perturbed KdV	364
18.5. Final remarks and conclusion	370
Bibliography	370
Chapter 19. Henri Poincaré and His Thoughts on the Philosophy of Science	
GERHARD HEINZMANN	373
19.1. Philosophy and Science	373
19.2. Poincaré's pragmatic occasionalism	374
19.3. Arithmetic	376
19.4. Geometry	379
19.5. Physics	383
19.6. Logic and abstraction	386
Bibliography	389
