List of Figures	xi
Preface	xiii
Acknowledgments	xv
Part 1. Preliminaries	
Chapter 1. A Complex Dynamics Primer	3
1.1. Signs of life	3
1.2. Newton's method: The inspiration for complex dynamics?	4
1.3. Schröder: The cornerstones of a theory of iteration	5
1.4. Schröder and functional equations	7
1.5. Fundamental concepts of iteration	11
1.6. Newton's method on the Riemann sphere: Two examples	13
1.7. Towards a deeper understanding of the local theory: The work of Koenigs and his students	17
1.8. The problem of the division of the plane	20
Chapter 2. Introduction: Dynamics of a Complex History	23
2.1. Introduction	23
2.2. Our story begins: Fatou's 1906 notice	24
2.3. Where we are headed	29
Chapter 3. Iteration and Differential Equations I: The Poincaré Connection	33
3.1. Introduction: Poincaré and the roots of complex dynamics	33
3.2. Methods for continuous systems	38
3.3. Poincaré's return map: An early use of iteration	41
3.4. Stable or not stable: That is the question	49
3.5. Lattès' thesis: Closer connections with complex iterates	53
3.6. Lattès' extension of the return map	54
3.7. Analogies between iteration and differential equations	58
3.8. A numerical method	59
3.9. Concluding remarks	60

Chapter 4. Iteration and Differential Equations II: Small Divisors	67
4.1. Introduction: Big problems from small divisors	67
4.2. Poincaré encounters small divisors	72
4.3. Small divisors in the work of Cigala and Levi-Civita	77
4.4. Small divisors in perturbation theory	81
4.5. Concluding remarks	90
Part 2. The Core (1906–1920)	
Chapter 5. Early Overseas Results: The United States	95
5.1. Introduction	95
5.2. Pfeiffer and irrationally neutral fixed points	96
5.3. Kasner’s mapping of conformal angles	97
5.4. Pfeiffer: The dawn of a new perspective	100
5.5. Pfeiffer and Diophantine numbers	105
5.6. A brief glance at Cremer’s 1927 paper	107
5.7. Pfeiffer and the functional equation $g^2 = f$	108
5.8. On Bennett’s work	109
5.9. Concluding remarks	110
Chapter 6. The Road to the <i>Grand Prix des Sciences Mathématiques</i>	113
6.1. The 1918 edition	113
6.2. One	115
6.3. Doctor in mathematics	118
6.4. The controversy between Fatou and Julia	119
6.5. The third man	126
6.6. Other conversations	126
6.7. Concluding remarks: The awarding of the prizes	128
Chapter 7. Works Written for the <i>Grand Prix</i>	131
7.1. Introduction	131
7.2. Julia: <i>Mémoire sur l’itération des fonctions rationnelles</i>	133
7.3. Fatou: <i>Sur les équations fonctionnelles</i>	148
7.4. The first men into (parameter) space	165
7.5. Lattès: The lost manuscript	167
7.6. Concluding remarks	179
Chapter 8. Iteration in Italy	181
8.1. The Italian tradition	181
8.2. Andreoli and Tricomi	181
8.3. Pincherle’s encyclopedia entries	183

8.4.	Early steps: Pincherle and graphical iteration	184
8.5.	Pincherle: From functional equations to... Pincherle-Julia sets?	186
8.6.	The Pincherle–Mandelbrot set? Pincherle’s <i>Grand Prix</i> entry	187
8.7.	Concluding remarks	196
Chapter 9.	The Giants Fall	197
9.1.	Introduction: Centers... and frictions	197
9.2.	Julia’s (non?) centered approach	198
9.3.	Julia’s (not so) final verdict on centers	202
9.4.	Fatou’s singular approach	204
9.5.	The possibilities for singular domains	208
9.6.	Concluding remarks	209
Part 3. After-Maths (1920–1942)		
Chapter 10.	Branching Out: Fatou and Julia in the 1920s	213
10.1.	Introduction	213
10.2.	The trilogy of permutable rational maps	216
10.3.	Seeds of dynamics for algebraic functions	219
10.4.	Fatou’s solo in transcendental dynamics	221
10.5.	Julia’s dynamical program	225
10.6.	Self-maps of the unit disc	226
10.7.	Concluding remarks	227
Chapter 11.	The German Wave	229
11.1.	Introduction	229
11.2.	Iteration in Germany: Historical overview	230
11.3.	Transalpine transitions: Placing Cremer in post-war Germany	231
11.4.	The bequest of Fatou and Julia	232
11.5.	Cremer: Who is he? What did he do?	232
11.6.	Cremer’s noncenters	235
11.7.	Cremer’s 1932 paper I: The existence of noncenters	242
11.8.	The 1932 paper II: Doubly connected singular domains	246
11.9.	Concluding remarks	252
Chapter 12.	Siegel, the Center Problem, and KAM Theory	253
12.1.	Full circle!	253
12.2.	Stable once more	253
12.3.	Solved at last	254
12.4.	Siegel and the center problem	260
12.5.	KAM theory: A new approach to small divisors	261
12.6.	Concluding remarks	265

Chapter 13. Iteratin' Around the Globe	267
13.1. Introduction	267
13.2. Ritt: Iterate on, Columbia, iterate	267
13.3. Remoundos: Iterated algebraic functions in Greece	269
13.4. Tambs-Lyche: Centers in Norway	270
13.5. Complex dynamics in Japan: Shimizu and Oka	271
13.6. Radu Bădescu: Fatou, Julia, and the Abel equations	273
13.7. Back to Germany: Hans Töpfer	275
13.8. Concluding remarks	277
Part 4. Tying the Future to the Past	
Appendix A. Report on the <i>Grand Prix des Sciences Mathématiques</i> in 1918	281
Appendix B. A History of Normal Families JOEL L. SCHIFF	285
Appendix C. Singular Lines of Analytic Functions AIMO HINKKANEN	291
Appendix D. Kleinian Groups KATSUHIKO MATSUZAKI	295
Appendix E. Curves of Julia SANFORD L. SEGAL	297
Appendix F. Progress in Julia's Extension of Schwarz's Lemma PETER R. MERCER	301
Appendix G. The Denjoy–Wolff Theorem KATSUHIKO MATSUZAKI	303
Appendix H. Dynamics of Self-Maps of the Unit Disc LAWRENCE A. HARRIS, DAVID SHOIKHET, MARK ELIN, AND SIMEON REICH	307
Appendix I. Koebe and Uniformization JOHN W. MILNOR	313
Appendix J. Permutable Maps in the 1920s XINHOU HUA AND RÉMI VAILLANCOURT	315
J.1. Permutability and iteration (I): Julia's point	315
J.2. Permutability and iteration (II): The Fatou version	317
J.3. Permutability and iteration (III): Ritt's approach	321
Appendix K. The Last 60 Years in Permutable Maps XINHOU HUA AND RÉMI VAILLANCOURT	325
K.1. Introduction	325

K.2.	Schröder's functional equation	326
K.3.	Permutable rational functions	326
K.4.	Permutable transcendental entire functions	327
K.5.	Permutable transcendental meromorphic functions	328
K.6.	Other dynamical properties of permutable functions	328
Appendix L. Understanding Julia Sets of Entire Maps		
	DIERK SCHLEICHER	331
L.1.	Introduction	331
L.2.	Dynamics of Polynomials	334
L.3.	Dynamics of Transcendental Entire Functions	336
L.4.	A Transcendental Function Which is Not Understood	340
Appendix M. Fatou: A Biographical Sketch		341
M.1.	Fatou the mathematician	341
M.2.	The Private Fatou	345
M.3.	A Fatou genealogy	348
Appendix N. Gaston Julia: A Biographical Sketch		351
N.1.	Julia's early years	351
N.2.	Julia's academic career	354
N.3.	Julia under suspicion	356
N.4.	A Julia Genealogy	356
Appendix O. Selected Biographies		359
Appendix P. Remarks on Computer Graphics		371
P.1.	Introduction	371
P.2.	Escape time method and its variants	371
P.3.	Domain coloring	374
P.4.	Grid-maps	377
Glossary		379
Bibliography		383
Index		433
