Chapter 1. Introduction	1
1.1. Subject	1
1.2. Organization	3
1.3. Conventions	5
Chapter 2. The Three-Body Problem and Its First Periodic Solutions	7
2.1. The verification of Newton's law	7
2.2. The first periodic solutions	10
Chapter 3. Hill's Variational Orbit	15
3.1. The variational orbit as a new intermediate orbit	15
3.2. <i>Researches in the Lunar Theory</i>	18
3.3. The motion of the lunar perigee	27
3.4. Completion of Hill's lunar theory	31
Chapter 4. Poincaré's Research on Periodic Orbits	33
4.1. King Oscar II's prize competition	33
4.2. <i>Les Méthodes Nouvelles de la Mécanique Céleste</i>	35
4.3. The general problem of dynamics	37
4.4. The reduction of the three-body problem	38
4.5. The importance of the periodic solutions	41
4.6. Poincaré's first paper on periodic orbits	44
4.7. Poincaré's method	45
4.8. Symmetric conjunctions and mirror configurations	47
4.9. Poincaré's classification of the periodic orbits	48
4.10. Stability	49
4.11. Bifurcations	51
Chapter 5. Darwin's Numerical Search for Periodic Orbits	55
5.1. From cosmogony to periodic orbits	55
5.2. The problem studied	57
5.3. Darwin's method	61
5.4. Darwin's results	68
5.5. Hough's ϕ -curves	73
5.6. Darwin's response	79

Chapter 6. Forest Ray Moulton	85
6.1. Achievements and accolades	85
6.2. As educator and administrator	86
6.3. Philosophical views	88
6.4. Recreation and character	93
6.5. Early life and education	94
6.6. At the University of Chicago	96
Chapter 7. Moulton's Mathematical Methods	105
7.1. A disciple of Poincaré	105
7.2. On certain rigorous methods	107
7.3. Mathematical methods for periodic orbits	111
7.4. Illustrative problems	118
Chapter 8. Oscillating Satellites	123
8.1. Collinear oscillating satellites	123
8.2. Equilateral triangle oscillating satellites	129
8.3. Extension to the general case of three finite masses	133
8.4. Extension to the elliptical restricted three-body problem	133
Chapter 9. A New Lunar Theory	137
9.1. Early interest in the lunar theory	137
9.2. Application to the Carnegie Institution for funding	138
9.3. Moulton's proposed lunar theory	140
9.4. First steps taken towards developing the theory	141
9.5. Moulton's 1906 paper on the lunar theory	143
Chapter 10. Moulton's <i>Periodic Orbits</i>	151
10.1. The publication of <i>Periodic Orbits</i>	151
10.2. The book's contents	157
10.3. The first extensions to the research	163
10.4. Synthesis of the periodic orbits	171
10.5. Moulton's resignation from the University of Chicago	179
Chapter 11. Epilogue	185
11.1. Moulton's later years	185
11.2. Strömgren and his termination principle	186
11.3. The controversy over Moulton's oscillating satellites	188
11.4. Wintner's criticism	194
11.5. Progress with the three-body problem	196
11.6. Moulton's legacy	198
Appendix A. Moulton's Doctoral Students	203
Appendix B. Letters	207
Appendix C. The Moulton Plane	219
Appendix D. Glossary	223
Bibliography	227
Name Index	249
Subject Index	253
