

# Contents

Preface	
S. TABACHNIKOV	ix
Binomial Coefficients, Polynomials, and Sequences (Several Approaches to a Certain Problem)	
V. N. VAGUTEN	1
Formulas for Prime Numbers	
YU. V. MATIYASEVICH	13
Fermat's Theorem for Polynomials	
B. MARTYNOV	25
Commuting Polynomials	
I. YANTAROV	31
On the Removal of Parentheses, on Euler, Gauss, and MacDonald, and on Missed Opportunities	
D. B. FUCHS	39
Chebyshev Polynomials and Recurrence Relations	
N. VASIL'EV AND A. ZELEVINSKII	51
Why Resistance Does Not Decrease	
O. V. LYASHKO	63
Evolution Processes and Ordinary Differential Equations	
V. I. ARNOL'D	73
Irrationality and Irreducibility	
V. A. OLEINIKOV	87
Irreducibility and Irrationality	
V. A. OLEINIKOV	95
The Arithmetic of Elliptic Curves	
YU. P. SOLOV'EV	105
Pascal's Hexagrams and Cubic Curves	
N. B. VASIL'EV	117
Kepler's Second Law and the Topology of Abelian Integrals (According to Newton)	
V. I. ARNOL'D	131

Partitions of Integers F. V. VAINSHTEIN	141
On the Denogardus Great Number and Hook's Law V. YU. OVSIENKO	153
Polynomials Having Least Deviation from Zero S. TABACHNIKOV	161
