| Preface | xvii |
| An overview of the book | xvii |
| Part I: Analyzing games: Strategies and equilibria | xvii |
| Part II: Designing games and mechanisms | xxi |
| For the reader and instructor | xxiv |
| Prerequisites | xxiv |
| Courses | xxiv |
| Notes | xxv |
| Part I: Analyzing games: Strategies and equilibria | 1 |
| Chapter 1. Combinatorial games | 2 |
| 1.1. Impartial games | 3 |
| 1.1.1. Nim | 6 |
| 1.1.2. Bouton's solution of Nim | 7 |
| 1.1.3. Other impartial games | 8 |
| 1.2. Partisan games | 10 |
| 1.2.1. The game of Hex | 12 |
| 1.2.2. Topology and Hex: A path of arrows* | 12 |
| 1.2.3. Hex and Y | 14 |
| 1.2.4. More general boards* | 16 |
| 1.2.5. Other partisan games played on graphs | 17 |
| Notes | 21 |
| Exercises | 22 |
| Chapter 2. Two-person zero-sum games | 24 |
| 2.1. Examples | 24 |
| 2.2. Definitions | 26 |
| 2.3. The Minimax Theorem and its meaning | 27 |
| 2.4. Simplifying and solving zero-sum games | 28 |
| 2.4.1. Pure optimal strategies: Saddle points | 28 |
| 2.4.2. Equalizing payoffs | 29 |
| 2.4.3. The technique of domination | 29 |
| 2.4.4. Using symmetry | 31 |
| 2.5. Nash equilibria, equalizing payoffs, and optimal strategies | 33 |
| 2.5.1. A first glimpse of incomplete information | 34 |
| 2.6. Proof of von Neumann's Minimax Theorem* | 35 |

| | |
|--|-----|
| 2.7. Zero-sum games with infinite action spaces* | 38 |
| Notes | 38 |
| Exercises | 40 |
| Chapter 3. Zero-sum games on graphs | 45 |
| 3.1. Games in series and in parallel | 45 |
| 3.1.1. Resistor networks and troll games | 46 |
| 3.2. Hide and Seek games | 48 |
| 3.2.1. Maximum matching and minimum covers | 49 |
| 3.3. A pursuit-evasion game: Hunter and Rabbit* | 52 |
| 3.3.1. Towards optimal strategies | 53 |
| 3.3.2. The hunter's strategy | 54 |
| 3.3.3. The rabbit's strategy | 55 |
| 3.4. The Bomber and Battleship game | 59 |
| Notes | 59 |
| Exercises | 60 |
| Chapter 4. General-sum games | 64 |
| 4.1. Some examples | 64 |
| 4.2. Nash equilibria | 67 |
| 4.3. General-sum games with more than two players | 71 |
| 4.3.1. Symmetric games | 75 |
| 4.4. Potential games | 75 |
| 4.4.1. The general notion | 77 |
| 4.4.2. Additional examples | 78 |
| 4.5. Games with infinite strategy spaces | 80 |
| 4.6. The market for lemons | 82 |
| Notes | 83 |
| Exercises | 84 |
| Chapter 5. Existence of Nash equilibria and fixed points | 89 |
| 5.1. The proof of Nash's Theorem | 89 |
| 5.2. Fixed-point theorems* | 90 |
| 5.2.1. Easier fixed-point theorems | 91 |
| 5.2.2. Sperner's Lemma | 92 |
| 5.2.3. Brouwer's Fixed-Point Theorem | 93 |
| 5.3. Brouwer's Fixed-Point Theorem via Hex* | 96 |
| 5.4. Sperner's Lemma in higher dimensions* | 98 |
| Notes | 102 |
| Exercises | 102 |
| Chapter 6. Games in extensive form | 104 |
| 6.1. Introduction | 104 |
| 6.2. Games of imperfect information | 109 |
| 6.2.1. Behavioral strategies | 110 |
| 6.3. Games of incomplete information | 112 |
| 6.3.1. Bayesian games | 113 |
| 6.3.2. Signaling | 116 |
| 6.3.3. Zero-sum games of incomplete information | 117 |
| 6.3.4. Summary: Comparing imperfect and incomplete information | 118 |

| | |
|--|-----|
| 6.4. Repeated games | 119 |
| 6.4.1. Repetition with discounting | 120 |
| 6.4.2. The Folk Theorem for average payoffs | 121 |
| 6.4.3. Proof of Theorem 6.4.10* | 123 |
| Notes | 124 |
| Exercises | 125 |
| Chapter 7. Evolutionary and correlated equilibria | 127 |
| 7.1. Evolutionary game theory | 127 |
| 7.1.1. Hawks and Doves | 127 |
| 7.1.2. Evolutionarily stable strategies | 128 |
| 7.2. Correlated equilibria | 132 |
| Notes | 135 |
| Exercises | 136 |
| Chapter 8. The price of anarchy | 138 |
| 8.1. Selfish routing | 138 |
| 8.1.1. Bounding the price of anarchy | 141 |
| 8.1.2. Affine latency functions | 143 |
| 8.1.3. Existence of equilibrium flows | 143 |
| 8.1.4. Beyond affine latency functions | 144 |
| 8.1.5. A traffic-anarchy tradeoff | 146 |
| 8.2. Network formation games | 146 |
| 8.3. A market sharing game | 148 |
| 8.4. Atomic selfish routing | 150 |
| 8.4.1. Extension theorems | 152 |
| 8.4.2. Application to atomic selfish routing | 154 |
| Notes | 154 |
| Exercises | 155 |
| Chapter 9. Random-turn games | 161 |
| 9.1. Examples | 161 |
| 9.2. Optimal strategy for random-turn selection games | 162 |
| 9.3. Win-or-lose selection games | 164 |
| 9.3.1. Length of play for random-turn Recursive Majority | 165 |
| Notes | 166 |
| Exercises | 167 |
| Part II: Designing games and mechanisms | 169 |
| Chapter 10. Stable matching and allocation | 170 |
| 10.1. Introduction | 170 |
| 10.2. Algorithms for finding stable matchings | 171 |
| 10.3. Properties of stable matchings | 172 |
| 10.3.1. Preferences by compatibility | 174 |
| 10.3.2. Truthfulness | 175 |
| 10.4. Trading agents | 176 |
| Notes | 176 |
| Exercises | 178 |

| | |
|---|-----|
| Chapter 11. Fair division | 183 |
| 11.1. Cake cutting | 183 |
| 11.1.1. Cake cutting via Sperner's Lemma | 185 |
| 11.2. Bankruptcy | 188 |
| Notes | 192 |
| Exercises | 193 |
| | |
| Chapter 12. Cooperative games | 194 |
| 12.1. Transferable utility games | 194 |
| 12.2. The core | 195 |
| 12.3. The Shapley value | 196 |
| 12.3.1. Shapley's axioms | 196 |
| 12.3.2. Shapley's Theorem | 198 |
| 12.3.3. Additional examples | 199 |
| 12.4. Nash bargaining | 200 |
| Notes | 203 |
| Exercises | 205 |
| | |
| Chapter 13. Social choice and voting | 206 |
| 13.1. Voting and ranking mechanisms | 206 |
| 13.2. Definitions | 208 |
| 13.3. Arrow's Impossibility Theorem | 209 |
| 13.4. The Gibbard-Satterthwaite Theorem | 210 |
| 13.5. Desirable properties for voting and ranking | 210 |
| 13.6. Analysis of specific voting rules | 211 |
| 13.7. Proof of Arrow's Impossibility Theorem* | 214 |
| 13.8. Proof of the Gibbard-Satterthwaite Theorem* | 216 |
| Notes | 218 |
| Exercises | 221 |
| | |
| Chapter 14. Auctions | 223 |
| 14.1. Single item auctions | 223 |
| 14.1.1. Bidder model | 224 |
| 14.2. Independent private values | 226 |
| 14.3. Revenue in single-item auctions | 227 |
| 14.4. Toward revenue equivalence | 228 |
| 14.4.1. I.I.D. bidders | 229 |
| 14.4.2. Payment and revenue equivalence | 230 |
| 14.4.3. Applications | 231 |
| 14.5. Auctions with a reserve price | 232 |
| 14.5.1. Revenue equivalence with reserve prices | 233 |
| 14.5.2. Entry fee versus reserve price | 233 |
| 14.5.3. Evaluation fee | 234 |
| 14.5.4. Ex-ante versus ex-interim versus ex-post | 235 |
| 14.6. Characterization of Bayes-Nash equilibrium | 236 |
| 14.7. Price of anarchy in auctions | 239 |
| 14.8. The Revelation Principle | 240 |
| 14.9. Myerson's optimal auction | 242 |
| 14.9.1. The optimal auction for a single bidder | 242 |

| | | |
|-------------|---|-----|
| 14.9.2. | A two-bidder special case | 243 |
| 14.9.3. | A formula for the expected payment | 245 |
| 14.9.4. | The multibidder case | 245 |
| 14.10. | Approximately optimal auctions | 248 |
| 14.10.1. | The advantage of just one more bidder | 248 |
| 14.10.2. | When only the highest bidder can win | 248 |
| 14.10.3. | The Lookahead auction is approximately optimal | 249 |
| 14.11. | The plot thickens... | 250 |
| | Notes | 252 |
| | Exercises | 253 |
| Chapter 15. | Truthful auctions in win/lose settings | 257 |
| 15.1. | The second-price auction and beyond | 257 |
| 15.2. | Win/lose allocation settings | 258 |
| 15.3. | Social surplus and the VCG mechanism | 259 |
| 15.4. | Applications | 260 |
| 15.4.1. | Shared communication channel, revisited | 260 |
| 15.4.2. | Spanning tree auctions | 260 |
| 15.4.3. | Public project | 261 |
| 15.5. | Sponsored search auctions, GSP, and VCG | 264 |
| 15.5.1. | Another view of the VCG auction for sponsored search | 265 |
| 15.5.2. | Generalized second-price mechanism | 267 |
| 15.6. | Back to revenue maximization | 270 |
| 15.6.1. | Revenue maximization without priors | 270 |
| 15.6.2. | Revenue extraction | 271 |
| 15.6.3. | An approximately optimal auction | 272 |
| | Notes | 273 |
| | Exercises | 274 |
| Chapter 16. | VCG and scoring rules | 278 |
| 16.1. | Examples | 278 |
| 16.2. | Social surplus maximization and the general VCG mechanism | 279 |
| 16.3. | Scoring rules | 283 |
| 16.3.1. | Keeping the meteorologist honest | 283 |
| 16.3.2. | A solution | 283 |
| 16.3.3. | A characterization of scoring rules* | 284 |
| | Notes | 286 |
| | Exercises | 287 |
| Chapter 17. | Matching markets | 289 |
| 17.1. | Maximum weighted matching | 289 |
| 17.2. | Envy-free prices | 291 |
| 17.2.1. | Highest and lowest envy-free prices | 291 |
| 17.2.2. | Seller valuations and unbalanced markets | 294 |
| 17.3. | Envy-free division of rent | 294 |
| 17.4. | Finding maximum matchings via ascending auctions | 295 |
| 17.5. | Matching buyers and sellers | 296 |
| 17.5.1. | Positive seller values | 297 |
| 17.6. | Application to weighted hide-and-peek games | 298 |

| | |
|---|-----|
| Notes | 299 |
| Exercises | 301 |
| Chapter 18. Adaptive decision making | 302 |
| 18.1. Binary prediction with expert advice and a perfect expert | 302 |
| 18.2. Nobody is perfect | 305 |
| 18.2.1. Weighted majority | 305 |
| 18.3. Multiple choices and varying costs | 307 |
| 18.3.1. Discussion | 308 |
| 18.3.2. The Multiplicative Weights Algorithm | 308 |
| 18.3.3. Gains | 311 |
| 18.4. Using adaptive decision making to play zero-sum games | 311 |
| 18.5. Adaptive decision making as a zero-sum game* | 313 |
| 18.5.1. Minimax regret is attained in $\{0,1\}$ losses | 313 |
| 18.5.2. Optimal adversary strategy | 314 |
| 18.5.3. The case of two actions | 315 |
| 18.5.4. Adaptive versus oblivious adversaries | 317 |
| Notes | 319 |
| Exercises | 320 |
| Appendix A. Linear programming | 323 |
| A.1. The Minimax Theorem and linear programming | 323 |
| A.2. Linear programming basics | 324 |
| A.2.1. Linear programming duality | 325 |
| A.2.2. Duality, more formally | 325 |
| A.2.3. An interpretation of a primal/dual pair | 326 |
| A.2.4. The proof of the Duality Theorem* | 328 |
| A.3. Notes | 331 |
| Exercises | 331 |
| Appendix B. Some useful probability tools | 332 |
| B.1. The second moment method | 332 |
| B.2. The Hoeffding-Azuma Inequality | 332 |
| Appendix C. Convex functions | 334 |
| Appendix D. Solution sketches for selected exercises | 338 |
| Bibliography | 349 |
| Index | 365 |
