Preface	vii
Introduction	1
0 Preliminaries	7
0.1 Some Basic Set Theory	7
0.2 Countability	9
0.3 Some Basic Geometry	11
0.4 Some Basic Linear Algebra	12
0.5 Some Basic Analysis and Topology	13
0.6 Some Basic Algebra	16
1 Introduction to Tiling	21
1.1 What is a Tiling?	21
1.2 Isometries of the Plane	31
1.3 Symmetries of Tiles	41
1.4 Symmetries of Tilings	47
1.5 The Possible Symmetry Groups of Tilings	59
1.6 How Many Tilings?	75
2 Types of Tilings	87
2.1 Uniform Tilings	87
2.2 Tilings with Regular Vertices	96
2.3 Tilings that are not Edge-to-Edge	102
2.4 Tiling via Patches	109
2.5 Random Tilings	122
2.6 The Extension Theorem	133
2.7 Periodic Tilings	142
2.8 Which Convex Polygons Tile?	151
2.9 Balanced Tilings	160
3 Aperiodic Prototiles	167
3.1 Quasicrystals and Aperiodic Protosets	167
3.2 Substitution Tilings	171
3.3 The Robinson Aperiodic Protoset	180
3.4 The Penrose Aperiodic Protosets	187

3.5	Tilings by Aperiodic Protosets as Projections	195
3.6	The Taylor-Socolar Aperiodic Tile	203
4	Tilings in Other Geometries and Other Dimensions	213
4.1	Tilings of the Sphere	213
4.2	Tilings of the Hyperbolic Plane	222
4.3	Tilings of Euclidean 3-Space	232
4.4	Knotted Tilings	242
4.5	Tilings, Surfaces, and 3-Manifolds	251
	Appendix	263
A.1	Creating Shapes that Tile	263
A.2	Projects	266
A.3	Section Notes	271
A.4	Resources	275
A.5	Figure credits	278
	References	288
	Index	298
