Preface	ix
Art and Photo Credits	xiii
Algebra and Arithmetics	
Chapter 1. Arithmetic and Combinatorics	
Lecture 1. Can a Number be Approximately Rational?	5
Lecture 2. Arithmetical Properties of Binomial Coefficients	27
Lecture 3. On Collecting Like Terms, on Euler, Gauss, and MacDonald, and on Missed Opportunities	45
Chapter 2. Equations	
Lecture 4. Equations of Degree Three and Four	67
Lecture 5. Equations of Degree Five	79
Lecture 6. How Many Roots Does a Polynomial Have?	93
Lecture 7. Chebyshev Polynomials	101
Lecture 8. Geometry of Equations	109
Geometry and Topology	
Chapter 3. Envelopes and Singularities	
Lecture 9. Cusps	125
Lecture 10. Around Four Vertices	141
Lecture 11. Segments of Equal Areas	159
Lecture 12. On Plane Curves	171
Chapter 4. Developable Surfaces	
Lecture 13. Paper Sheet Geometry	189
Lecture 14. Paper Möbius Band	203
Lecture 15. More on Paper Folding	213
Chapter 5. Straight Lines	
Lecture 16. Straight Lines on Curved Surfaces	225

Lecture 17. Twenty-seven Lines	239
Lecture 18. Web Geometry	253
Lecture 19. The Crofton Formula	269
Chapter 6. Polyhedra	
Lecture 20. Curvature and Polyhedra	285
Lecture 21. Non-inscribable Polyhedra	301
Lecture 22. Can One Make a Tetrahedron out of a Cube?	307
Lecture 23. Impossible Tilings	319
Lecture 24. Rigidity of Polyhedra	335
Lecture 25. Flexible Polyhedra	345
Chapter 7. Two Surprising Topological Constructions	
Lecture 26. Alexander's Horned Sphere	361
Lecture 27. Cone Eversion	373
Chapter 8. On Ellipses and Ellipsoids	
Lecture 28. Billiards in Ellipses and Geodesics on Ellipsoids	383
Lecture 29. The Poncelet Porism and Other Closure Theorems	403
Lecture 30. Gravitational Attraction of Ellipsoids	415
Solutions to Selected Exercises	425
Bibliography	457
Index	461
