Preface	xiii
Acknowledgements	xvii
Credits	xxiii
Overview	xxv
About the Cover	xxix
Chapter 1. Introduction	1
1.1. Arithmetic and Spacetime Geometry	1
1.2. Riemannian, Quantum and Noncommutative Geometry	2
1.3. String Theory and Spacetime Geometry	3
1.4. The Riemann Hypothesis and the Geometry of the Primes	6
1.5. Motivations, Objectives and Organization of This Book	9
Chapter 2. String Theory on a Circle and T-Duality: Analogy with the Riemann Zeta Function	21
2.1. Quantum Mechanical Point-Particle on a Circle	24
2.2. String Theory on a Circle: T-Duality and the Existence of a Fundamental Length	26
2.2.1. <i>String Theory on a Circle</i>	29
2.2.2. <i>Circle Duality (T-Duality for Circular Spacetimes)</i>	34
2.2.3. <i>T-Duality and the Existence of a Fundamental Length</i>	43
2.3. Noncommutative Stringy Spacetimes and T-Duality	45
2.3.1. <i>Target Space Duality and Noncommutative Geometry</i>	48
2.3.2. <i>Noncommutative Stringy Spacetimes: Fock Spaces, Vertex Algebras and Chiral Dirac Operators</i>	55
2.4. Analogy with the Riemann Zeta Function: Functional Equation and T-Duality	66
2.4.1. <i>Key Properties of the Riemann Zeta Function: Euler Product and Functional Equation</i>	67
2.4.2. <i>The Functional Equation, T-Duality and the Riemann Hypothesis</i>	75
2.5. Notes	80
Chapter 3. Fractal Strings and Fractal Membranes	89

3.1. Fractal Strings: Geometric Zeta Functions, Complex Dimensions and Self-Similarity	91
3.1.1. <i>The Spectrum of a Fractal String</i>	102
3.2. Fractal (and Prime) Membranes: Spectral Partition Functions and Euler Products	103
3.2.1. <i>Prime Membranes</i>	104
3.2.2. <i>Fractal Membranes and Euler Products</i>	109
3.3. Fractal Membranes vs. Self-Similarity: Self-Similar Membranes	123
3.3.1. <i>Partition Functions Viewed as Dynamical Zeta Functions</i>	138
3.4. Notes	145
Chapter 4. Noncommutative Models of Fractal Strings: Fractal Membranes and Beyond	155
4.1. Connes' Spectral Triple for Fractal Strings	157
4.2. Fractal Membranes and the Second Quantization of Fractal Strings	160
4.2.1. <i>An Alternative Construction of Fractal Membranes</i>	165
4.3. Fractal Membranes and Noncommutative Stringy Spacetimes	170
4.4. Towards a Cohomological and Spectral Interpretation of (Dynamical) Complex Dimensions	174
4.4.1. <i>Fractal Membranes and Quantum Deformations: A Possible Connection with Haran's Real and Finite Primes</i>	183
4.5. Notes	183
Chapter 5. Towards an 'Arithmetic Site': Moduli Spaces of Fractal Strings and Membranes	197
5.1. The Set of Penrose Tilings: Quantum Space as a Quotient Space	200
5.2. The Moduli Space of Fractal Strings: A Natural Receptacle for Zeta Functions	205
5.3. The Moduli Space of Fractal Membranes: A Quantized Moduli Space of Fractal Strings	208
5.4. Arithmetic Site, Frobenius Flow and the Riemann Hypothesis	215
5.4.1. <i>The Moduli Space of Fractal Strings and Deningers's Arithmetic Site</i>	217
5.4.2. <i>The Moduli Space of Fractal Membranes and (Noncommutative) Modular Flow vs. Arithmetic Site and Frobenius Flow</i>	219
5.4.2a. <i>Factors and Their Classification</i>	220
5.4.2b. <i>Modular Theory of von Neumann Algebras</i>	223
5.4.2c. <i>Type III Factors: Discrete vs. Continuous Flows</i>	227
5.4.2d. <i>Modular Flows and the Riemann Hypothesis</i>	231
5.4.2e. <i>Towards an Extended Moduli Space and Flow</i>	236
5.5. Flows of Zeros and Zeta Functions: A Dynamical Interpretation of the Riemann Hypothesis	241
5.5.1. <i>Introduction</i>	241
5.5.2. <i>Expected Properties of the Flows of Zeros and Zeta Functions</i>	243

5.5.3. <i>Analogies with Other Geometric, Analytical or Physical Flows</i>	254
5.5.3a. <i>Singular Potentials, Feynman Integrals and Renormalization Flow</i>	255
5.5.3b. <i>KMS-Flow and Deformation of Pólya–Hilbert Operators</i>	261
5.5.3c. <i>Ricci Flow and Geometric Symmetrization (vs. Modular Flow and Arithmetic Symmetrization)</i>	270
5.5.3d. <i>Towards a Noncommutative, Arithmetic KP-Flow</i>	293
5.6. Notes	294
Appendix A. Vertex Algebras	315
A.1. Definition of Vertex Algebras: Translation and Scaling Operators	315
A.2. Basic Properties of Vertex Algebras	318
A.3. Notes	321
Appendix B. The Weil Conjectures and the Riemann Hypothesis	325
B.1. Varieties Over Finite Fields and Their Zeta Functions	325
B.2. Zeta Functions of Curves Over Finite Fields and the Riemann Hypothesis	335
B.3. The Weil Conjectures for Varieties Over Finite Fields	338
B.4. Notes	344
Appendix C. The Poisson Summation Formula, with Applications	347
C.1. General PSF for Dual Lattices: Scalar Identity and Distributional Form	348
C.2. Application: Modularity of Theta Functions	350
C.3. Key Special Case: Self-Dual PSF	352
C.4. Proof of the General Poisson Summation Formula	356
C.5. Modular Forms and Their Hecke L -Series	358
C.5.1. <i>Modular Forms and Cusp Forms</i>	358
C.5.2. <i>Hecke Operators and Hecke Forms</i>	361
C.5.3. <i>Hecke L-Series of a Modular Form</i>	362
C.5.4. <i>Modular Forms of Higher Level and Their L-Functions</i>	366
C.6. Notes	371
Appendix D. Generalized Primes and Beurling Zeta Functions	373
D.1. Generalized Primes \mathcal{P} and Integers \mathcal{N}	373
D.2. Beurling Zeta Functions $\zeta_{\mathcal{P}}$	374
D.3. Analogues of the Prime Number Theorem	375
D.4. Analytic Continuation and a Generalized Functional Equation for $\zeta_{\mathcal{P}}$	378
D.5. Partial Orderings on Generalized Integers	385
D.6. Notes	387
Appendix E. The Selberg Class of Zeta Functions	389

E.1. Definition of the Selberg Class	390
E.2. The Selberg Conjectures	393
E.3. Selected Consequences	394
E.4. The Selberg Class, Artin L -Series and Automorphic L -Functions: Langlands' Reciprocity Laws	398
E.4.1. <i>Selberg's Orthonormality Conjecture and Artin L-Series: Artin's Holomorphy Conjecture</i>	399
E.4.2. <i>Selberg's Orthonormality Conjecture and Automorphic Representations: Langlands' Reciprocity Conjecture</i>	400
E.4.2a. <i>Adeles $k_{\mathbf{A}}$ and Linear Group $GL_n(k_{\mathbf{A}})$</i>	400
E.4.2b. <i>Automorphic Representations and Automorphic L-Series</i>	401
E.5. Notes	407
Appendix F. The Noncommutative Space of Penrose Tilings and Quasicrystals	411
F.1. Combinatorial Coding of Penrose Tilings, and Consequences	412
F.2. Groupoid \mathbf{C}^* -Algebra and the Noncommutative Space of Penrose Tilings	416
F.2.1. <i>Groupoids: Definition and Examples</i>	416
F.2.2. <i>The Groupoid Convolution Algebra</i>	420
F.2.3. <i>Generalization: Groupoids, Quasicrystals and Noncommutative Spaces</i>	424
F.3. Quasicrystals: Dynamical Hull and the Noncommutative Brillouin Zone	427
F.3.1. <i>Mathematical Quasicrystals and Their Generalizations</i>	427
F.3.2. <i>Translation Dynamical System: The Hull of a Quasicrystal</i>	437
F.3.3. <i>Typical Properties of Atomic Configurations</i>	444
F.3.4. <i>The Noncommutative Brillouin Zone and Groupoid \mathbf{C}^*-Algebra of a Quasicrystal</i>	446
F.4. Notes	449
Bibliography	453
Conventions	491
Index of Symbols	493
Subject Index	503
Author Index	551
