# Table of Contents

Introduction	ix
Acknowledgements	xiii
Chapter 1. Sets, Functions, and Other Basic Ideas	1
§1. Sets and Elements	2
§2. Equality, Inclusion, and Notation	2
§3. The Algebra of Sets	4
§4. Cartesian Products, Counting, and Power Sets	8
§5. Some Sets of Numbers	10
§6. Equivalence Relations and the Construction of $\mathbb{Q}$	15
§7. Functions	22
§8. Countability and Other Basic Ideas	30
§9. Axiom of Choice	38
§10. Independent Projects	41
Chapter 2. Linear Algebra	47
§1. Fundamentals of Linear Algebra	48
§2. Linear Transformations	54
§3. Linear Transformations and Matrices	56
§4. Determinants	59
§5. Geometric Linear Algebra	67
§6. Independent Projects	76
Chapter 3. The Construction of the Real and Complex Numbers	89

---

§1. The Least Upper Bound Property and the Real Numbers	90
§2. Consequences of the Least Upper Bound Property	92
§3. Rational Approximation	94
§4. Intervals	97
§5. The Construction of the Real Numbers	98
§6. Convergence in $\mathbb{R}$	102
§7. Automorphisms of Fields	107
§8. Construction of the Complex Numbers	108
§9. Convergence in $\mathbb{C}$	110
§10. Independent Projects	115
Chapter 4. Metric and Euclidean Spaces	125
§1. Introduction	125
§2. Definition and Basic Properties of Metric Spaces	126
§3. Topology of Metric Spaces	129
§4. Limits and Continuous Functions	137
§5. Compactness, Completeness and Connectedness	145
§6. Independent Projects	155
Chapter 5. Complete Metric Spaces and the $p$ -adic Completion of $\mathbb{Q}$	167
§1. The Contraction Mapping Theorem and Its Applications	168
§2. The Baire Category Theorem and Its Applications	170
§3. The Stone–Weierstrass Theorem	172
§4. The $p$ -adic Completion of $\mathbb{Q}$	176
§5. Challenge Problems	184
Index	189
