Preface	xi
A Computational Geometric Topology	1
I Graphs	3
I.1 Connected Components	3
I.2 Curves in the Plane	9
I.3 Knots and Links	13
I.4 Planar Graphs	18
Exercises	24
II Surfaces	27
II.1 2-dimensional Manifolds	27
II.2 Searching a Triangulation	33
II.3 Self-intersections	37
II.4 Surface Simplification	42
Exercises	47
III Complexes	51
III.1 Simplicial Complexes	51
III.2 Convex Set Systems	57
III.3 Delaunay Complexes	63
III.4 Alpha Complexes	68
Exercises	74

B	Computational Algebraic Topology	77
IV	Homology	79
IV.1	Homology Groups	79
IV.2	Matrix Reduction	85
IV.3	Relative Homology	90
IV.4	Exact Sequences	95
	Exercises	101
V	Duality	103
V.1	Cohomology	103
V.2	Poincaré Duality	108
V.3	Intersection Theory	114
V.4	Alexander Duality	118
	Exercises	123
VI	Morse Functions	125
VI.1	Generic Smooth Functions	125
VI.2	Transversality	130
VI.3	Piecewise Linear Functions	135
VI.4	Reeb Graphs	140
	Exercises	145

C	Computational Persistent Topology	147
VII	Persistence	149
VII.1	Persistent Homology	149
VII.2	Efficient Implementations	156
VII.3	Extended Persistence	161
VII.4	Spectral Sequences	166
	Exercises	171
VIII	Stability	175
VIII.1	1-parameter Families	175
VIII.2	Stability Theorems	180
VIII.3	Length of a Curve	185
VIII.4	Bipartite Graph Matching	191
	Exercises	197
IX	Applications	199
IX.1	Measures for Gene Expression Data	199
IX.2	Elevation for Protein Docking	206
IX.3	Persistence for Image Segmentation	213
IX.4	Homology for Root Architectures	218
	Exercises	224
	References	227
	Index	235
