Preface xi

List of Figures xxiii

List of Photographs xxv

Part I
Simple Things:
How Structures of Human Cognition Reveal Themselves in Mathematics

1 A Taste of Things to Come 3
1.1 Simplest possible example 3
1.2 Switches and flows: some questions for cognitive psychologists 6
1.3 Choiceless computation 7
1.3.1 Polynomial time complexity 7
1.3.2 Choiceless algorithms 9
1.4 Analytic functions and the inevitability of choice . . 10
1.5 You name it—we have it 12
1.6 Why are certain repetitive activities more pleasurable than others? 15
1.7 What lies ahead? 18

2 What You See Is What You Get 23
2.1 The starting point: mirrors and reflections 23
2.2 Image processing in humans 25
2.3 A small triumph of visualization: Coxeter's proof of Euler's Theorem 28
2.4 Mathematics: interiorization and reproduction . . . 30
2.5 How to draw an icosahedron on a blackboard 33
2.6 Self-explanatory diagrams 38

3 The Wing of the Hummingbird 43
3.1 Parsing 43
3.2 Number sense and grammar 46
3.3 What about music? 48
3.4 Palindromes and mirrors 49
3.5 Parsing, continued: do brackets matter? 52
3.6 The mathematics of bracketing and Catalan numbers 54
3.7 The mystery of Hipparchus 57

4 Simple Things 61
4.1 Parables and fables 61
4.2 Cryptomorphism 66
4.2.1 Israel Gelfand on languages and translation 67
4.2.2 Isadore Singer on the compression of language 68
4.2.3 Cognitive nature of cryptomorphism 69
4.3 Some mathlets: order, numerals, symmetry 70
4.3.1 Order and numerals 70
4.3.2 Ordered/unordered pairs 72
4.3.3 Processes, sequences, time 74
4.3.4 Symmetry 74
4.4 The line of sight and convexity 75
4.5 Convexity and the sensorimotor intuition 78
4.6 Mental arithmetic and the method of Radzivilovsky 81
4.7 Not-so-simple arithmetic: "named" numbers 82

5 Infinity and Beyond 89
5.1 Some visual images of infinity 89
5.2 From here to infinity 92
5.3 *The Sand Reckoner* and potential infinity 97
5.4 Achilles and the Tortoise 100
5.5 The vanishing point 103
5.6 How humans manage to lose to insects in mind games 106
5.7 The nightmare of infinitely many (or just many) dimensions 109

6 Encapsulation of Actual Infinity 117
6.1 Reification and encapsulation 117
6.2 From potential to actual infinity 119
6.2.1 Balls, bins, and the Axiom of Extensionality 120
6.2.2 Following Cantor's footsteps 123
6.2.3 The art of encapsulation 123
6.2.4 Can one live without actual infinity? 124

6.2.5 Finite differences and asymptotic at zero . 125
6.3 Proofs by handwaving 126

Part II
Mathematical Reasoning

7 What Is It That Makes a Mathematician? 135
7.1 Flies and elephants 135
7.2 The inner dog 138
7.3 Reification on purpose 140
7.4 Plato vs. Sfard 143
7.5 Multiple representation and de-encapsulation 143
7.5.1 Rearrangement of brackets 147
7.6 The Economy Principle 148
7.7 Hidden symmetries 151
7.8 The game without rules 153
7.9 Winning ways 155
7.10 A dozen problems 160
7.10.1 Caveats 160
7.10.2 Problems 161
7.10.3 Comments 163

8 "Kolmogorov's Logic" and Heuristic Reasoning 169
8.1 Hedy Lamarr: a legend from the golden era of moving pictures 169
8.2 Mathematics of frequency hopping 171
8.3 "Kolmogorov's Logic" and heuristic reasoning 173
8.4 The triumph of the heuristic approach: Kolmogorov's "$5/3$" law 178
8.5 Morals drawn from the three stories 181
8.6 Women in mathematics 181

9 Recovery vs. Discovery 187
9.1 Memorize or rederive? 187
9.2 Heron's formula 189
9.3 Limitations of recovery procedures 190
9.4 Metatheory 192

10 The Line of Sight 197
10.1 The Post Office Conjecture 197
10.2 Solutions 202
10.3 Some philosophy 205
10.4 But is the Post Office Conjecture true? 207
10.5 Keystones, arches, and cupolas 209
10.6 Military applications 212

Part III
History and Philosophy

11 The Ultimate Replicating Machines 217
11.1 Mathematics: reproduction, transmission, error correction 219
11.2 The Babel of mathematics 220
11.3 The nature and role of mathematical memes 222
11.4 Mathematics and Origami 228
11.5 Copying by squares 231
11.6 Some stumbling blocks 235
11.6.1 Natural language and music 235
11.6.2 Mathematics and the natural sciences 235
11.6.3 Genotype and phenotype 236
11.6.4 Algorithms of the brain 236
11.6.5 Evolution of mathematics 237
11.7 Mathematics as a proselytizing cult 238
11.8 Fancy being Euclid? 240

12 The Vivisection of the Cheshire Cat 247
12.1 A few words on philosophy 247
12.2 The little green men from Mars 251
12.3 *Better Than Life* 252
12.4 The vivisection of the Cheshire Cat 253
12.5 A million dollar question 256
12.6 The boring, boring theory of snooks 260
12.6.1 Why are some mathematical objects more important than others? 260
12.6.2 Are there many finite snooks around? 262
12.6.3 Snooks, snowflakes, Kepler, and Pálfy 264
12.6.4 Hopf algebras 267
12.6.5 Back to ontological commitment 270
12.7 Zilber's Field 271
12.8 Explication of (in)explicitness 273
12.9 Testing times 276
