
CONTENTS

Preface	vii
Chapter 1. Introduction	1
§1.1. Deterministic and random differential equations	1
§1.2. Stochastic differentials	2
§1.3. Itô's chain rule	3
Chapter 2. A Crash Course in Probability Theory	7
§2.1. Basic definitions	7
§2.2. Expected value, variance	14
§2.3. Independence	17
§2.4. Some probabilistic methods	21
§2.5. Law of Large Numbers, Central Limit Theorem	23
§2.6. Conditional expectation	28
§2.7. Martingales	34
Chapter 3. Brownian Motion and "White Noise"	37
§3.1. Motivation	37
§3.2. Definition, elementary properties	41
§3.3. Construction of Brownian motion	45
§3.4. Sample path properties	53
§3.5. Markov property	57

Chapter 4. Stochastic Integrals	59
§4.1. Preliminaries	59
§4.2. Itô's integral	65
§4.3. Itô's chain and product rules	70
§4.4. Itô's integral in higher dimensions	77
Chapter 5. Stochastic Differential Equations	83
§5.1. Definitions, examples	83
§5.2. Existence and uniqueness of solutions	90
§5.3. Properties of solutions	96
§5.4. Linear stochastic differential equations	98
Chapter 6. Applications	103
§6.1. Stopping times	103
§6.2. Applications to PDE, Feynman–Kac formula	108
§6.3. Optimal stopping	112
§6.4. Options pricing	117
§6.5. The Stratonovich integral	121
Appendix	127
Exercises	135
Notes and Suggested Reading	145
Bibliography	147
Index	149
