Chapters in the Companion Volume	ix
Preface	xi
Suggestions on How to Read This Volume	xix
Chapter 1. Symbolic Expressions	1
1.1. Basic protocol in the use of symbols	2
1.2. Expressions and identities	5
1.3. Mersenne primes and finite geometric series	11
1.4. Polynomials and order of operations	17
1.5. Rational expressions	24
Chapter 2. Translation of Verbal Information into Symbols	27
2.1. Equations and inequalities	27
2.2. Some examples of translation	30
Chapter 3. Linear Equations in One Variable	37
3.1. Solving linear equations	37
3.2. Some word problems	45
Chapter 4. Linear Equations in Two Variables and Their Graphs	53
4.1. Coordinate system in the plane	54
4.2. Linear equations in two variables	57
4.3. The concept of slope	61
4.4. Proof that graphs of linear equations are lines	72
4.5. Every line is the graph of a linear equation	76
4.6. Useful facts and examples	78
Chapter 5. Simultaneous Linear Equations	85
5.1. Solutions of linear systems and the geometric interpretation	85
5.2. The algebraic method of solution	87
5.3. Characterization of parallel lines by slope	93
5.4. Algebraic criterion for solvability	98
5.5. Partial fractions and Pythagorean triples	101
5.6. Appendix	109
Chapter 6. Functions and Their Graphs	117
6.1. The basic definitions	117
6.2. Why functions?	122
6.3. Some examples of graphs	126
6.4. Remarks on graphs and coordinate systems	133

Chapter 7. Linear Functions and Proportional Reasoning	137
7.1. Constant rate and linear functions	137
7.2. Proportional reasoning	144
Chapter 8. Linear Inequalities and Their Graphs	155
8.1. How do inequalities arise in real life?	155
8.2. The symbolic translation	157
8.3. Basic facts about inequalities and applications	160
8.4. Graphs of inequalities in the plane	163
8.5. Solution of the manufacturing problem	180
8.6. Behavior of linear functions in the plane	187
Chapter 9. Exponents	191
9.1. Positive-integer exponents	194
9.2. Rational exponents	200
9.3. Laws of exponents	205
9.4. Scientific notation	214
9.5. Three additional remarks on rational exponents	220
Chapter 10. Quadratic Functions and Their Graphs	223
10.1. Quadratic equations	224
10.2. A special class of quadratic functions	238
10.3. Properties of quadratic functions	246
10.4. The graph and the parabola	252
10.5. Some applications	260
Appendix: Facts from [Wu-PreAlg]	265
Bibliography	273
