

Contents

To The Reader	ix
Introduction	xi
Seminar 1. Number Systems	1
1. Arithmetic in the Integers, Part I	2
2. Roll Back, A Number Game of Chance	7
3. Other Number Systems	8
4. Arithmetic in the Integers, Part II	9
Seminar 2. Divisibility and Order in the Integers	15
1. Introduction	15
2. Properties of Divisibility	16
3. Divisibility and Arithmetic in \mathbb{Z} .	20
4. An Activity on Secret Codes, I	21
5. Order in \mathbb{Z}	23
6. Divisibility and Order in \mathbb{Z} .	28
Seminar 3. GCD's and The Division Algorithm	31
1. Introduction	31
2. Euclid's Game	33
3. The Division Algorithm	35
4. Return to Euclid's Game	38
5. The Euclidean Algorithm	40
6. GCD's as Linear Combinations	43
Seminar 4. Prime Numbers and Factorization Into Primes	51
1. Prime Numbers	51
2. Factorization Into Primes	58
Seminar 5. Applications of Prime Power Factorization	65
1. Finding All Positive Divisors of n	65
2. The Locker Problem	69
3. The Greatest Common Divisor, the Least Common Multiple and the Least Common Denominator	71

4. Secret Codes, a Game of Integer Divisors, II	77
Seminar 6. Modular Arithmetic and Divisibility Tests	81
1. Preliminaries	81
2. Introduction	81
3. Examples of Congruence	81
4. Congruence	85
5. Congruence and Tests for Divisibility	92
Seminar 7. More Modular Arithmetic	99
1. Congruence Classes	99
2. The Arithmetic of Congruence Classes	103
3. What is a Linear Congruence?	109
4. Solving Linear Congruences	109
5. Inverses mod m	113
Seminar 8. The Arithmetic of Fractions	115
1. Introduction	115
2. Fractions and Why We Need Them	115
3. Multiplication of Fractions and Common Denominators	117
4. Equivalence of Fractions	123
Seminar 9. Properties of Multiplication of Fractions	131
1. Reducing a Fraction to Lowest Terms	131
2. Multiplication and Equivalence	134
3. Properties of Multiplication of Fractions	136
4. Equality and Equivalence	137
5. Fractions and Mixed Numbers	138
6. Division of Fractions	139
7. Word Problems with Fractions	141
Seminar 10. Addition of Fractions	145
1. Addition of Fractions with the Same Denominator	145
2. The Rule for Addition of Fractions	146
3. Comparison of Methods for Addition of Fractions	149
4. The Properties of Addition of Fractions	153
5. The Distributive Property	156
6. Addition and Equivalence	157
Seminar 11. The Decimal Expansion of a Fraction	161
1. Definitions of Decimal Fraction, Decimal Expansion and Decimal	161
2. Constructing the Decimal Expansion of a Fraction	164
3. Fractions with Terminating Decimals	170
4. Fractions with Nonterminating Decimals	174
Seminar 12. Order and the Number Line	179

CONTENTS

vii

1. Positive Fractions and Negative Fractions	179
2. Comparison of Fractions	181
3. Properties of Order in the Set of Fractions	184
4. Ordering of Decimals	188
5. Representing Fractions on the Number Line	190
6. Decimals on the Number Line	196
Appendix A. The Mysterious Long Division Algorithm	199
Appendix B. The Pigeonhole Principle	205
Index	207
