

Contents

Preface to the English Edition	vii
Part 1. Continued Fractions	1
Continued Fractions	3
What is a Continued Fraction?	3
The Geometric Theory of Continued Fractions	6
Kuzmin's Theorem	12
Multidimensional Continued Fractions	30
A Generalization of Lagrange's Theorem	30
Editors' Comments	39
Part 2. Geometry of Complex Numbers, Quaternions, and Spins	43
Geometry of Complex Numbers, Quaternions, and Spins	45
Complex Numbers	45
Motions of the Plane	46
A Digression Concerning Orientations	48
The Generalization of Complex Numbers to the Concept of Quaternions	52
Some Examples	61
Newton's Differential Equation	64
From the Pythagorean Theorem to Riemann Surfaces	65
Mathematical Trinities	71
Spins and Braids	74
Appendix	76
Editors' Comments	79
Part 3. Euler Groups and Arithmetic of Geometric Progressions	83
Euler Groups and Arithmetic of Geometric Progressions	85
1. Basic Definitions	85

2.	A Digression on the Euler Function	85
3.	Tables for Euler Groups	89
4.	Euler Groups of Products	91
5.	The Homomorphism Given by Reduction Modulo a , $\Gamma(ab) \rightarrow \Gamma(a)$	91
6.	Proofs of the Theorems on Euler Groups	93
7.	Fermat-Euler Dynamical Systems	97
8.	Statistics of Geometric Progressions	98
9.	Measurement of the Degree of Randomness of a Subset	100
10.	The Average Value of the Parameter of Randomness	102
11.	Additional Remarks about Fermat-Euler Dynamics	103
12.	Primitive Roots of a Prime Modulus	105
13.	Patterns in Coordinates of Quadratic Residues	107
14.	Applications to Quadratic Congruences	112
Part 4. Problems for Children 5 to 15 Years Old		123
	Problems	125
	Solutions to Selected Problems	139
	Bibliography	175
