

Contents

Foreword	ix
Problems, exercises, circles, and olympiads	ix
Why this book and how to use it	x
English-language references	xi
Introduction	xiii
What this book is about and whom it is for	xiii
Learning by doing problems	xiv
Parting words <i>By A. Ya. Kanel-Belov</i>	xv
Olympiads and mathematics	xv
Research problems for high school students	xvi
How this book is organized	xvi
Resources and literature	xvii
Acknowledgements	xvii
Numbering and notation	xviii
Notation	xviii
Bibliography	xxi
Chapter 1. Counting	1
1. How many ways? (1)	
<i>By A. A. Gavrilyuk and D. A. Permyakov</i>	1
Suggestions, solutions, and answers	2
2. Sets of subsets (2) <i>By D. A. Permyakov</i>	3
Suggestions, solutions, and answers	4
3. The principle of inclusion-exclusion (2) <i>By D. A. Permyakov</i>	6
Suggestions, solutions, and answers	9
Chapter 2. Finite sets	13
1. The pigeonhole principle (1) <i>By A. Ya. Kanel-Belov</i>	13
Part 1	13
Part 2 (2)	14
Suggestions, solutions, and answers	15
2. The extremal principle (2) <i>By A. Ya. Kanel-Belov</i>	16

Suggestions, solutions, and answers	17
3. Periodicity I (2) <i>By A. Ya. Kanel-Belov</i>	18
Suggestions, solutions, and answers	20
4. Periodicity II (2) <i>By P. A. Kozhevnikov</i>	20
Suggestions, solutions, and answers	21
5. Finite and countable sets (2) <i>By P. A. Kozhevnikov</i>	22
Suggestions, solutions, and answers	23
Comments about the solutions of problems 2.5.1 and 2.5.2	26
Chapter 3. Graphs <i>By D. A. Permyakov and A. B. Skopenkov</i>	29
1. Graphs (2)	29
Suggestions, solutions, and answers	31
2. Counting in graphs (2)	34
Suggestions, solutions, and answers	35
3. Paths in graphs (2)	36
Suggestions, solutions, and answers	37
Chapter 4. Constructions and invariants	39
1. Constructions (1) <i>By A. V. Shapovalov</i>	39
Suggestions, solutions, and answers	43
2. Invariants I (1) <i>By A. Ya. Kanel-Belov</i>	50
Suggestions, solutions, and answers	52
3. Invariants II (1) <i>By A. V. Shapovalov</i>	53
Suggestions, solutions, and answers	57
4. Colorings	60
4.A. Tilings (1) <i>By A. Ya. Kanel-Belov</i>	60
4.B. Tables (2) <i>By D. A. Permyakov</i>	61
Suggestions, solutions, and answers	62
5. Semi-invariants (1) <i>By A. V. Shapovalov</i>	62
Suggestions, solutions, and answers	66
Chapter 5. Algorithms	71
1. Games (1) <i>By D. A. Permyakov, M. B. Skopenkov, and A. V. Shapovalov</i>	71
Symmetric strategy	71
Game on outracing	72
Accumulation of advantages	72
Joke games	73
Growing a tree of positions	74
Passing the move	74
Miscellany	75
Suggestions, solutions, and answers	76
2. Information problems (2) <i>By A. Ya. Kanel-Belov</i>	81
Suggestions, solutions, and answers	83
3. Error correction codes (2) <i>By M. B. Skopenkov</i>	84
Suggestions, solutions, and answers	85

4. Boolean cube (2) <i>By A. B. Skopenkov</i>	86
Hints	88
Suggestions, solutions, and answers	88
5. Expressibility for functions of the algebra of logic <i>By A. B. Skopenkov</i>	90
Examples and definitions (1)	90
Post's theorem (2*)	91
Hints	94
Suggestions, solutions, and answers	94
6. Complexity of summation <i>By Yu. G. Kydryashov and A. B. Skopenkov</i>	94
Introductory problems (2)	94
Definitions and examples (3*)	95
Asymptotic estimates (4*)	97
Suggestions, solutions, and answers	97
Chapter 6. Probability <i>By A. B. Skopenkov and A. A. Zaslavsky</i>	103
1. Classical definition of probability (1)	103
Suggestions, solutions, and answers	105
2. A more general definition of probability (1)	105
Suggestions, solutions, and answers	107
3. Independence and conditional probability (1)	108
Suggestions, solutions, and answers	111
4. Random variables (3)	112
Suggestions, solutions, and answers	115
5. Bernoulli trials (3)	117
Suggestions, solutions, and answers	119
6. Random walks and electrical circuits (3) <i>By A. A. Zaslavsky, M. B. Skopenkov, and A. V. Ustinov</i>	119
Biased random walk*	121
Physical interpretation	121
Existence and uniqueness of voltage	124
Conductance of circuits	125
The variational principle	127
Two-dimensional random walk	127
Three-dimensional random walks	128
Suggestions, solutions, and answers	129
Chapter 7. Combinatorial geometry	139
1. Rug runners and napkins (2) <i>By P. A. Kozhevnikov</i>	139
One-dimensional geometry, or "rug runners"	139
Two-dimensional geometry, or "napkins on the table"	140
Three dimensions	141
Suggestions, solutions, and answers	141
2. Helly's theorem (2) <i>By A. V. Akopyan</i>	144

Suggestions, solutions, and answers	146
3. Lattice polygons (2) <i>By V. V. Prasolov and M. B. Skopenkov</i>	146
3.A. Area of a polygon on grid paper (2)	147
3.B. Dual lattice polygons (3*)	149
Suggestions, solutions, and answers	151
4. Pigeonhole principle on a line (3) <i>By A. Ya. Kanel-Belov</i>	160
Suggestions, solutions, and answers	161
5. The pigeonhole principle and its application to geometry (3) <i>By I. V. Arzhantsev</i>	161
The area of a figure	161
The pigeonhole principle for areas	162
The theorems of Blichfeldt and Minkowski	163
Dirichlet's theorem on approximation of irrational numbers	165
Suggestions, solutions, and answers	166
6. Phase spaces (3) <i>By A. Ya. Kanel-Belov</i>	167
7. Linear variation (3) <i>By A. Ya. Kanel-Belov</i>	168
Suggestions, solutions, and answers	170
8. Compose a square (3*) <i>By M. B. Skopenkov, O. A. Malinovskaya, S. A. Dorichenko, and F. A. Sharov</i>	170
Leading questions	171
Rectangles from squares.	173
From cutting to roots of polynomials	175
What's next	175
Suggestions, solutions, and answers	176
9. Is it possible to make a cube from a tetrahedron? (3) <i>By M. V. Prasolov and M. B. Skopenkov</i>	183
Reduction to a plane geometry problem	183
Solution of the plane geometry problem	185
Suggestions, solutions, and answers	186
Bibliography	191
Index	195
