INTRODUCTION	xi
ACKNOWLEDGEMENTS	xv
I BACKGROUND	1
1 Functions	3
1.1 Sets	3
1.2 Relations	9
1.3 Functions	10
1.4 Limits and Continuity	16
1.5 Differentiation	20
1.6 Solved Problems	29
II BASIC EQUATIONS	39
2 A Primer on Functional Relations	41
2.1 Fundamental Notions	41
2.2 Beginning Problems	47
3 Equations for Arithmetic Functions	57
3.1 The Notion of Difference Equations	57
3.2 Multiplicative Functions	61
3.3 Linear Difference Equations	62
3.4 Solved Problems	71
4 Equations Reducing to Algebraic Systems	77
4.1 Solved Problems	77
4.2 Group Theory in Functional Equations	82

5	Cauchy's Equations	91
5.1	The First Cauchy Equation	91
5.2	The Second Cauchy Equation	93
5.3	The Third Cauchy Equation	94
5.4	The Fourth Cauchy Equation	97
5.5	Solved Problems	100
6	Cauchy's NQR Method	107
6.1	The NQR Method	108
6.2	Solved Problems	110
7	Equations for Trigonometric Functions	117
7.1	Characterization of the Sine and Cosine	117
7.2	D'Alembert–Poisson I Equation	127
7.3	D'Alembert–Poisson II Equation	129
7.4	Solved Problems	132
III	GENERALIZATIONS	135
8	The Pexider, Vincze and Wilson Equations	137
8.1	The First Pexider Equation	137
8.2	The Second Pexider Equation	139
8.3	The Third Pexider Equation	141
8.4	The Fourth Pexider Equation	142
8.5	The Vincze Functional Equations	143
8.6	The Wilson Functional Equations	148
8.7	Solved Problems	149
9	Vector and Matrix Variables	153
9.1	Equations of Cauchy and Pexider Type	154
9.2	Solved Problems	156
10	Systems of Equations	161
10.1	Solved Problems	163
IV	CHANGING THE RULES	167
11	Less Than Continuity	169
11.1	Imposing Weaker Conditions	169
11.2	Discontinuous Solutions	171
11.3	Solved Problems	177

12 More Than Continuity	185
12.1 Differentiable Functions	185
12.2 Analytic Functions	192
12.3 Stronger Conditions as a Tool	195
13 Functional Equations for Polynomials	199
13.1 Fundamentals	199
13.2 Symmetric Polynomials	201
13.3 More on the Roots of Polynomials	205
13.4 Solved Problems	214
14 Conditional Functional Equations	221
14.1 The Notion of Conditional Equations	221
14.2 An Example	222
15 Functional Inequalities	225
15.1 Useful Concepts and Facts	225
15.2 Solved Problems	228
V EQUATIONS WITH NO PARAMETERS	231
16 Iterations	233
16.1 The Need for New Methods	233
16.2 Iterates, Orbits, Fixed Points, and Cycles	236
16.3 Fixed Points: Discussion	239
16.4 Cycles: Discussion	243
16.5 From Iterations to Difference Equations	247
16.6 Solved Problems	248
16.7 A Taste of Chaos	254
17 Solving by Invariants and Linearization	265
17.1 Constructing Solutions	265
17.2 Linear Equations	267
17.3 The Abel and Schröder Equations	269
17.4 Linearization	270
17.5 Solved Problems	272
18 More on Fixed Points	277
18.1 Solved Problems	277

VI	GETTING ADDITIONAL EXPERIENCE	281
19	Miscellaneous Problems	283
19.1	Integral Functional Equations	283
19.2	Problems Solved by Functional Relations	288
19.3	Assortment of Problems	298
20	Additional Problems	303
20.1	Functions	303
20.2	Problems That Can Be Solved Using Functions	309
20.3	Arithmetic Functions	309
20.4	Functional Equations With Parameters	314
20.5	Functional Equations with No Parameters	321
20.6	Fixed Points and Cycles	324
20.7	Existence of Solutions	327
20.8	Systems of Functional Equations	330
20.9	Conditional Functional Equations	331
20.10	Polynomials	332
20.11	Functional Inequalities	336
20.12	Functional Equations Containing Derivatives	339
20.13	Functional Relations Containing Integrals	340
VII	AUXILIARY MATERIAL	343
	ACRONYMS & ABBREVIATIONS	345
	SET CONVENTIONS	347
	NAMED EQUATIONS	349
	BIBLIOGRAPHY	351
	INDEX	355
