## The Role of Advection in a Two-Species Competition Model: A Bifurcation Approach

- Introduction: The role of advection
- Summary of main results
- Preliminaries
- Coexistence and classification of  $\mu$ - $\nu$  plane
- Results in  $\mathcal{R}_1$ : Proof of Theorem 2.10
- Results in  $\mathcal{R}_2$ : Proof of Theorem 2.11
- Results in  $\mathcal{R}_3$ : Proof of Theorem 2.12
- Summary of asymptotic behaviors of  $\eta_*$  and  $\eta^*$
- Structure of positive steady states via Lyapunov-Schmidt procedure
- Non-convex domains
- Global bifurcation results
- Discussion and future directions
- Appendix A, Asymptotic behavior of  $\tilde{u}$  and  $\lambda_u$
- Appendix B, Limit eigenvalue problems as  $\mu, \nu \rightarrow 0$
- Appendix C, Limiting eigenvalue problem as  $\mu \rightarrow \infty$
- Bibliography
